NEW QUESTION # 32
A customer reports their tablet was recently dropped on the ground. The tablet has a small crack in one corner of the display, and it does not charge when plugged in. Which of the following should a technician do first?

- A. Run diagnostics on the digitizer
- B. Perform a hard restart.
- C. Replace the battery
- D. Inspect the USB-C port for damage

Answer: D

NEW QUESTION # 33
A technician is working on a RAID 1 array that is apparently degraded. The technician verifies the RAM and power are both operating as expected. Which of the following can the technician do to further isolate the issue?

- A. Reconfigure the array as RAID 0.
- B. Rebuild the RAID array.
- C. Run the chkdsk /i command.
- D. Perform individual drive diagnostics.

Option C:Rebuilding should only occurafteridentifying and replacing a faulty drive.
Option D:RAID 0 offers no redundancy and would destroy data in this context.

NEW QUESTION # 34

A computer is experiencing random shutdowns. A technician notices that the fans on the computer work but are noisy. The CPU temperature is about 122°F (50°C) when the computer is started but rises to 208°F (98°C) when applications are opened. Which of the following would most likely fix this issue?

- A. Adding more RAM to the computer
- B. Installing a high-performance heat sink
- C. Replacing the power supply
- D. Adjusting the fan settings

Answer: B

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
Excessive heat buildup due to insufficient cooling is a primary cause of unexpected shutdowns. A high- performance heat sink improves thermal transfer, dissipates more heat, and helps maintain CPU temperature within safe limits. When CPU temperatures reach levels like 208°F (98°C), the system may shut down to prevent damage.
#Reference: "CompTIA A+ Complete Study Guide" by Quentin Docter - Chapter 1, pages 68-71, discusses CPU cooling and heat sink improvements.

A technician is troubleshooting stylus issues on identical, company-provided tablets. Users can purchase their own accessories. Some users have no issues, but others report that their styluses charge intermittently and die frequently. Which of the following is the most likely cause of this issue?

- A. The tablets need to be updated.
- B. Certain cases are causing charging issues.
- C. Some of the tablets have manufacturing defects.
- D. The malfunctioning styluses need firmware updates.

Answer: B

Explanation:
The most likely cause isthird-party or ill-fitting casesobstructing the contact between the stylus and the tablet charging mechanism. Some cases may not be designed with stylus charging in mind, particularly if users are purchasing their own accessories.
Option B:A software update might fix OS-related issues, but would not typically affect physical charging.
Option C:If some devices had defects, the issue would likely be consistent, not isolated to some users.
Option D:Firmware issues could be a factor but are less likely than physical obstructions when users are using different accessories.
