SC-401試験教材は、多くの人々がソフトパワーを向上させるのに役立ちました。彼らは同僚よりも効率的であるため、リーダーからより多くの注目を集めています。私たちは皆普通の専門家です。私たちは機会に値することを示すために力を示さなければなりません。SC-401練習エンジンを使用することは、体力を改善するための最も重要なステップです。バタフライ効果のように、あなたの選択の1つがあなたの人生に影響するかもしれないことを知っています。また、SC-401試験の質問は、SC-401試験に合格して夢のような認定を取得するための適切な試験ツールとなります。

Microsoft SC-401 認定試験の出題範囲：

トピック	出題範囲
トピック 1	<ul style="list-style-type: none"> • Manage Risks, Alerts, and Activities: This section assesses Security Operations Analysts on insider risk management, monitoring alerts, and investigating security activities. It covers configuring risk policies, handling forensic evidence, and responding to alerts using Microsoft Purview and Defender tools. Candidates must also analyze audit logs and manage security workflows.
トピック 2	<ul style="list-style-type: none"> • Protect Data Used by AI Services: This section evaluates AI Governance Specialists on securing data in AI-driven environments. It includes implementing controls for Microsoft Purview, configuring Data Security Posture Management (DSPM) for AI, and monitoring AI-related security risks to ensure compliance and protection.
トピック 3	<ul style="list-style-type: none"> • Implement Information Protection: This section measures the skills of Information Security Analysts in classifying and protecting data. It covers identifying and managing sensitive information, creating and applying sensitivity labels, and implementing protection for Windows, file shares, and Exchange. Candidates must also configure document fingerprinting, trainable classifiers, and encryption strategies using Microsoft Purview.
トピック 4	<ul style="list-style-type: none"> • Implement Data Loss Prevention and Retention: This section evaluates Data Protection Officers on designing and managing data loss prevention (DLP) policies and retention strategies. It includes setting policies for data security, configuring Endpoint DLP, and managing retention labels and policies. Candidates must understand adaptive scopes, policy precedence, and data recovery within Microsoft 365.

テストSC-401の認定に合格すると、あなたの就労能力が社会から認められ、良い仕事を見つけることができます。SC-401クイズトレントを習得して試験に合格した場合。同僚、上司、親relative、友人、社会から尊敬されます。総じて、SC-401テスト準備を購入すると、試験に合格するだけでなく、キャリアと将来についての夢を実現するのに役立ちます。ですから、SC-401試験の教材を購入してすぐに行動を起こすことをheしないでください。

Microsoft Administering Information Security in Microsoft 365 認定 SC-401 試験問題 (Q114-Q119):

質問 # 114

You have a Microsoft 365 subscription that contains the devices shown in the following table.

From which devices can Microsoft Purview Insider Risk Management capture forensic evidence?

- A. Device1, Device2 and Device3
- B. Device2 and Device3 only
- C. Device2 only
- D. Device only
- E. Device1 and Device2 only

正解: C

解説:

Forensic evidence in Microsoft Purview Insider Risk Management allows capturing screenshots/clips of user activity on endpoints.

Requirements for forensic evidence capture:

The device must be onboarded to Microsoft Purview (via Defender for Endpoint).

The Microsoft Purview client must be installed.

Supported platforms: Windows 10 and Windows 11 (macOS is not supported for forensic evidence).

Now check each device:

Device1 (Windows 11) # Client installed, but not onboarded ## Not eligible.

Device2 (Windows 10) # Onboarded and client installed ## Eligible.

Device3 (macOS) # Onboarded, but client not installed and macOS is not supported ## Not eligible.

Therefore, only Device2 qualifies.

質問 # 115

You have a Microsoft 365 E5 subscription.

You have a file named Customer.csv that contains a list of 1,000 customer names.

You plan to use Customer.csv to classify documents stored in a Microsoft SharePoint Online library.

What should you create in the Microsoft Purview portal, and which type of element should you select? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

正解:

解説:

Explanation:

Create: # A sensitive info type

Element: # Keyword dictionary

You want to classify documents in SharePoint Online based on a list of customer names stored in Customer.csv (1,000 entries).

In Microsoft Purview, there are several options for custom classification:

Sensitive info type (SIT):

Designed to detect predefined or custom patterns such as credit cards, IDs, or custom lists.

You can build a custom SIT using elements like keyword dictionary, regular expressions, and functions.

In this case, since you have a large CSV with 1,000 customer names, you upload that list as a keyword dictionary element.

Trainable classifier:

Used when you want AI to classify documents by training on examples of positive/negative samples (like contracts, resumes).

Not relevant here because you already have a structured list of customer names rather than needing machine learning classification.

Adaptive scope:

Determines where (users, groups, sites) policies apply, not what content is classified.

Not relevant here.

Correct pairing:

Create: A sensitive info type (SIT).

Element: Keyword dictionary (upload the Customer.csv file).

Reference:

Microsoft Learn: Create a custom sensitive information type

Microsoft Learn: Keyword dictionary for SITs

Final Answer:

Create # A sensitive info type

Element # Keyword dictionary

質問 # 116

You have a Microsoft 365 E5 subscription that uses Microsoft Purview.

You need to perform a content search for email messages that meet the following requirements:

* Are delivered to both user1@contoso.com and user2@contoso.com

* Are sent from a user account that has a name that starts with the word Compliance How should you complete the query in the

KQL editor? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

正解:

解説:

Explanation:

質問 # 117

Drag and Drop Question

You have a Microsoft 365 E5 subscription that contains two users named User1 and User2.

You need to implement insider risk management. The solution must meet the following requirements:

- Ensure that User1 can create insider risk management policies.

- Ensure that User2 can use content captured by using insider risk management policies.

- Follow the principle of least privilege.

To which role group should you add each user? To answer, drag the appropriate role groups to the correct users. Each role group may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

正解:

解説:

Explanation:

Box 1: Insider Risk Management Admins

Ensure that User1 can create insider risk management policies.

Use this role group to initially configure insider risk management and later to segregate insider risk administrators into a defined group. Users in this role group can create, read, update, and delete insider risk management policies, global settings, and role group assignments.

Box 2: Insider Risk Management Investigators

Investigators can access & view forensic evidence captures and Content Explorer.

質問 # 118

You have a Microsoft J65 E5 subscription that contains a user named User1.

All users are assigned Microsoft 365 Copilot licenses.

You deploy Microsoft Purview Data Security Posture Management for AI (DSPM for AI).

You need to ensure that User1 can analyze prompts and responses for AI interaction events. The solution must follow the principle of least privilege.

To which two role groups should you add User1? Each correct answer presents part of the solution.

NOTE; Each correct selection is worth one point.

- A. Content Explorer list Viewer
- B. Information Protection Analysts
- C. Security Reader
- D. Insider Risk Management Investigators
- E. Content Explorer Content Viewer

正解: A、B

解説:

The requirement is that User1 must be able to analyze prompts and responses for AI interaction events in Microsoft Purview DSPM for AI, while following the principle of least privilege.

Information Protection Analysts role group:

Members can review and analyze sensitive data activity, including AI interaction events collected by Purview DSPM. This role is specifically intended for analysts monitoring sensitive information and is therefore necessary for User1.

Content Explorer List Viewer role group:

Members can see metadata about items with sensitive information, such as file names, locations, sensitivity labels, and policy matches, without accessing the actual file content. This provides the required visibility for AI-related data classification and interaction analysis while adhering to the least privilege principle.

Roles not required:

Content Explorer Content Viewer would give the ability to view the actual content of files, which is more access than needed.

Security Reader is intended for reviewing alerts and incidents but not for analyzing AI prompts and responses.

Insider Risk Management Investigators focus on insider risk investigations, not AI event analysis.
