SCP-NPM Real Exam Answers - Reliable SCP-NPM Test Forum

After years of research in IT exam certification, our VCE4Dumps has become a leader of IT industry. Our exam software is consisted of comprehensive and diverse questions. SCP-NPM exam software, as one of the most popular software with best sales, has helped many candidates successfully Pass SCP-NPM Exam. Besides, as we know, once you have obtain SCP-NPM exam certification, your career in IT industry will be much easier.

SolarWinds Network Performance Monitor (NPM) Exam Sample Questions (Q47-Q52):

NEW QUESTION # 47
You want to limit a user to only monitor Windows servers and not be able to view other devices that NPM monitors. How can you do this?

- A. Alert limitations
- B. Account views
- C. Account limitations
- D. View permissions

Answer: C

Explanation:
Account limitations are a way of restricting the access of Orion user accounts to specific network objects, such as nodes, interfaces, groups, maps, or alerts. You can use account limitations to limit a user to only monitor Windows servers and not be able to view other devices that NPM monitors. For example, you can create a custom limitation based on the node property Operating System, and select only Windows as the value. Then, you can apply this limitation to the user account or user group that you want to restrict. The other options are not effective ways of limiting user access to specific devices, as they either affect the visibility of the entire view (view permissions), the layout of the view (account views), or the scope of the alerts (alert limitations).

Limit user access to network areas with account limitations
Create custom account limitations

NEW QUESTION # 48
You can display Palo Alto firewalls on Orion Maps.

- A. False
- B. True

Answer: B

Explanation:
Orion Maps 2.0 supports displaying Palo Alto firewalls as network devices, along with their interfaces, zones, policies, and traffic data. You can also view the firewall status, alerts, and events on the map. To add a Palo Alto firewall to an Orion Map, you need to have Network Insight for Palo Alto enabled in NPM, and discover the firewall using SNMP and API polling. Reference: Orion Maps 2.0, New Alerting, and Palo Alto Networks Monitoring - SolarWinds Lab Episode #77, SolarWinds Lab Episode 77: Orion Maps 2.0, New Alerting, and Palo Alto Networks Monitoring - Orange Matter, Network Insight for Palo Alto Networks in NPM

NEW QUESTION # 49
Users report that NPM performance is slow when managing devices through the Orion Web Console. You verify the SNMP trapping is responsible for the poor performance. How do you resolve this issue?

- A. Add an Additional Web Server to handle the load of users accessing the NPM Orion Web Console
- B. Point the devices to a trap manager and filter unwanted messages before forwarding remaining traps to the Orion Platform
- C. Add the devices as managed nodes to cut down on the trap messages received
- D. Reduce the number of days SNMP messages are kept in the SolarWinds Trap Viewer

Answer: B

NEW QUESTION # 50
You start a new job where NPM is already in use. As soon as you are added to the alert list, you begin receiving "high traffic utilization" alerts from a handful of interfaces.
When you check the alert, the traffic spike has ended. Your new colleagues advise you to ignore these alerts because the spikes rarely last for more than a couple of minutes and are only a concern if they last longer.
How should NPM be modified so you receive fewer false alerts?

- A. Configure the alert so that it resets only when traffic utilization remains high for a sustained period
- B. Increase the status polling frequency on the problematic interfaces
- C. Configure the alert so that it triggers only when traffic utilization remains high for a sustained period
- D. Increase the statistics polling frequency on the problematic interfaces

Answer: C

Explanation:

The best way to reduce false alerts for high traffic utilization is to configure the alert trigger condition to be more specific and accurate. By setting the alert to trigger only when traffic utilization remains high for a sustained period, you can avoid getting alerted for short-lived spikes that are not a cause for concern. You can use the Time of Day and Trigger Condition options in the alert configuration wizard to define the duration and threshold of the high traffic utilization condition. For example, you can set the alert to trigger only when traffic utilization is greater than 80% for more than 10 minutes during business hours. References:

NEW QUESTION # 51

All users can create their own Orion Maps. How do you limit a user from seeing or working with select monitored entities through the SolarWinds server?

- A. Configure Alert imitations to remove access to the Orion user account
- B. Configure Account limitations to remove access to the Orion user account
- C. Unmanage entities to remove access to the Orion user account
- D. Configure permissions on the monitored entity to remove access to the Orion user account

Answer: D

NEW QUESTION # 52

......

Obtaining an IT certification shows you are an ambitious individual who is always looking to improve your skill set. Most companies think highly of this character. Our SCP-NPM exam original questions will help you clear exam certainly in a short time. You don't need to worry about how difficulty the exams are. VCE4Dumps release the best high-quality SCP-NPM Exam original questions to help you most candidates pass exams and achieve their goal surely.
