Guidewire Associate Certification - InsuranceSuite Analyst - Mammoth Proctored Exam Sample Questions (Q29-Q34):

NEW QUESTION # 29
Which of the following are deliverables during the Inception Phase of a project? choose two

- A. Process Maps
- B. Estimated User Stories
- C. Detail Design Document (DDD)
- D. Conceptual Sprint Plan

Answer: B,D

Explanation:

Comprehensive and Detailed Explanation:
The Inception Phase focuses on defining the project scope and planning the execution. The two primary deliverables that enable the project to move into the Development (Construction) phase are:
* Estimated User Stories (Option C):During Inception, the team conducts "Elaboration" workshops to define requirements as User Stories. Critically, these stories must beEstimated(usually in story points) by the development team. Without estimates, the scope cannot be measured against the timeline.
* Conceptual Sprint Plan (Option B):using the estimates from Option C, the team creates a high-level roadmap (Conceptual Sprint Plan) that slots the user stories into specific sprints. This sets the expectation forwhatwill be deliveredwhenand defines the Minimum Viable Product (MVP).
Why other options are incorrect:
* A. Detail Design Document (DDD):This is associated with "Waterfall" methodologies (Big Design Up Front). In Guidewire's Agile methodology (SurePath), detailed technical design happensduringthe sprint, just before implementation, not as a massive document at the start.
* D. Process Maps:While Process Maps are created (often as part of the "Current State vs. Future State" analysis), they are typically consideredinputsorsupporting artifactsfor the User Stories, rather than a primary "Phase Deliverable" in the same critical category as the Schedule (Plan) and the Scope (Backlog).

NEW QUESTION # 30
Guidewire Training Resources include content on the Out-of-the-Box functionality of Guidewire products. What website would you access to gain information and details on how to write a Quote?

- A. http://www.guidewire.com
- B. https://educationmarketplace.guidewire.com
- C. http://education.guidewire.com
- D. https://marketplace.guidewire.com

Answer: B

Explanation:
Guidewire provides structured training resources that explainOut-of-the-Box (OOTB) functionality, including core business processes such as quoting, policy issuance, endorsements, and renewals. The correct platform for accessing this training content is theGuidewire Education Marketplace, makingOption Bthe correct answer.
TheEducation Marketplaceis Guidewire's official learning portal for analysts, developers, and project team members. It contains role-based courses, videos, documentation, and hands-on learning paths that explain how Guidewire products work from a functional and technical perspective. Training modules on quoting walk users through OOTB workflows, required data elements, validation rules, and system behavior.
The other options do not serve this purpose. The main Guidewire website (Option A) provides corporate and marketing information.
The Guidewire Marketplace (Option C) focuses on partner solutions and extensions.
The legacy education URL (Option D) is no longer the primary access point for training materials.

NEW QUESTION # 31
When prioritizing the implementation of a new state regulation for flood risk assessment in commercial property policies, which factors are most crucial for ensuring strategic value alignment and a successful Guidewire Cloud deployment?

- A. Focusing solely on the legal interpretation of the regulation, even if it requires complex custom development
- B. Maximizing reuse of legacy system code and UI elements regardless of Guidewire Cloud Standards
- C. Prioritizing integration with a third-party flood modeling service that significantly deviates from Guidewire OOTB capabilities
- D. Ensuring the new solution adheres to Guidewire Cloud Standards to enable seamless future updates and optimal platform performance
- E. Analyzing how the new assessment process aligns with the company's long-term objective of reducing overall loss exposure and improving underwriting excellence
- F. Implementing only the minimum data capture quickly and postponing proper data modeling

Answer: D,E

Explanation:
In Guidewire Cloud implementations, prioritization decisions must balanceregulatory compliance, business value, and long-term platform sustainability. The most crucial factors arestrategic business alignmentand adherence to Guidewire Cloud Standards,

makingOptions A and Ccorrect.

Analyzing how the regulation aligns withlong-termunderwriting and risk management objectives(Option A) ensures the solution delivers more than compliance. This approach supports value-driven requirements by improving underwriting quality and reducing loss exposure, rather than treating regulation as a standalone obligation.

Ensuring adherence toGuidewire Cloud Standards(Option C) is equally critical. These standards protect upgradeability, performance, and operational stability. Solutions that follow Cloud Standards are easier to maintain and less likely to cause issues during future platform upgrades.

The remaining options represent short-term or high-risk approaches. Over-customization (Option B), deviation from OOTB functionality (Option D), deferring proper data modeling (Option E), and reusing legacy patterns (Option F) all increase technical debt and threaten cloud success.

NEW QUESTION # 32

How are Page Configuration Format (PCF) files used in the Guidewire development environment?

- A. Non-developers use PCF files to perform data analysis and reporting tasks.
- B. They serve as automated testing scripts for validating UI functionality.
- C. Business analysts configure them to define requirements.
- D. Developers work with them using the Guidewire Studio tool.
- E. They contain the schema definition for the application database.
- F. Developers use them to create and edit the visual components of the user interface.

Answer: D,F

Explanation:

In Guidewire InsuranceSuite,Page Configuration Format (PCF) filesare a core part of theuser interface configuration layer. They define the structure, layout, and behavior of screens, panels, lists, and UI components displayed to end users. Therefore,Options B and Fare correct.

PCF files are used bydevelopers to create and edit the visual components of the UI(Option B). These files control how data is presented, how users navigate between screens, and how UI elements respond to user interaction. PCF files reference entities, fields, typelists, and rules, but they do not define business logic themselves.

Developers work with PCF files usingGuidewire Studio(Option F), which is the primary IDE for configuring Guidewire applications. Studio provides validation, navigation, and deployment tooling for PCF files, making it the correct environment for managing UI configuration.

The other options are incorrect. Database schema definitions are handled by the data model, not PCF files (Option A). Non-developers do not use PCF files for reporting (Option C). Business analysts document requirements but do not configure PCF files directly (Option D). PCF files are not automated test scripts (Option E).

For analysts, understanding what PCF files do-and who works with them-helps ensure requirements are written clearly and realistically, aligned with Guidewire UI architecture.

NEW QUESTION # 33

A _____ key field stores a reference to a related object in another entity. It defines a unidirectional relationship. For example, AssignedUser in Claim is the name of a field that points to a specific user in the User entity.

- A. array
- B. entity
- C. foreign
- D. field
- E. type

Answer: C

Explanation:

Comprehensive and Detailed Explanation:

In the Guidewire Data Model, a Foreign Key (Option C) is the mechanism used to link one entity to a specific instance of another entity.

* Definition:A Foreign Key field stores the unique identifier (ID) of a related object in a different table.

This establishes a "Many-to-One" or "One-to-One" relationship. It is considered "unidirectional" because the link is defined on the source entity (the child) pointing to the target entity (the parent).

* The Example:The question provides the example of AssignedUser on the Claim entity. A single claim is assigned to exactly one

specific user. Therefore, the Claim entity contains a Foreign Key field named AssignedUser that holds the ID of the corresponding record in the User entity.

* Analyst Relevance:Understanding Foreign Keys is crucial for Data Mapping. When an analyst defines requirements for integration, they must know if a field is a simple string or a link to another object. If it is a Foreign Key, the integration must provide the ID (or a public ID) of that existing object, not just a text name.
Why the other options are incorrect:
* B. Type key:A Type Key links to aTypelist(a static list of defined values like "Open," "Closed," or
"Pending"), not to a dynamic "entity" that stores user data.
* E. Array:An Array defines a "One-to-Many" relationship (e.g., a Policy has anarrayof Vehicles), which is the inverse of a Foreign Key.
* D. Field:While technically a field, the specific architectural term for a reference field is a Foreign Key.
"Field" generally implies atomic data (String, Integer).
