### NEW QUESTION # 301

You are developing a business process flow.

JavaScript must be used to implement additional business logic in the business process flow.

You need to evaluate the JavaScript code.

What is the result of running each code segment? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

JavaScript code segment	Code Result
<code>formContext.getControl("test_number").setVisible(false);</code>	<input type="checkbox"/> Hides only the control in the body of the form <input type="checkbox"/> Hides only the control in the business process flow <input type="checkbox"/> Hides controls in the body of the form and the business process flow
<code>formContext.data.process.addOnStageChange(testFunction);</code>	<input type="checkbox"/> Adds an event handler to enable a function named testFunction to run when the business process flow stage changes <input type="checkbox"/> Adds an event handler to enable a function named testFunction to run before the business process flow stage changes <input type="checkbox"/> Adds an event handler to enable a function named testFunction to run when the business process flow stage is selected

**Answer:**

Explanation:

JavaScript code segment	Code Result
<code>formContext.getControl("test_number").setVisible(false);</code>	<div>Hides only the control in the body of the form</div> <div>Hides only the control in the business process flow</div> <div>Hides controls in the body of the form and the business process flow</div>
<code>formContext.data.process.addOnStageChange(testFunction);</code>	<div>Adds an event handler to enable a function named testFunction to run when the business process flow stage changes</div> <div>Adds an event handler to enable a function named testFunction to run before the business process flow stage changes</div> <div>Adds an event handler to enable a function named testFunction to run when the business process flow stage is selected</div>

#### Explanation

Box 1: Hides the control in the body of the form.

The Client API form context (formContext) provides a reference to the form or to an item on the form, such as, a quick view control or a row in an editable grid, against which the current code is executed.

setVisible sets a value that indicates whether the control is visible.

Box 2: Add an event handler to enable a function named TestFunction to run when the business process flow stage changes.

addOnStageChange adds a function as an event handler for the OnStageChange event so that it will be called when the business process flow stage changes.
