## 100% Pass 2026 Oracle The Best 1z0-1073-25: 100% Oracle Inventory Cloud 2025 Implementation Professional Correct Answers

The Oracle 1z0-1073-25 certification brings multiple career benefits. Reputed firms happily hire you for good jobs when you earn the Oracle Inventory Cloud 2025 Implementation Professional 1z0-1073-25 certificate. If you are already an employee of a tech company, you get promotions and salary hikes upon getting the Oracle Inventory Cloud 2025 Implementation Professional 1z0-1073-25. All these career benefits come when you crack the Oracle Inventory Cloud 2025 Implementation Professional 1z0-1073-25 Certification examination. To pass the Oracle Inventory Cloud 2025 Implementation Professional 1z0-1073-25 test, you need to prepare well from updated practice material such as real Oracle 1z0-1073-25 Dumps. We guarantee that this study material will prove enough to prepare successfully for the 1z0-1073-25 examination.

## Oracle Inventory Cloud 2025 Implementation Professional Sample Questions

## (Q32-Q37):

### NEW QUESTION # 32

#### SIMULATION

#### Set Up Back-to-Back Transfer Flow

The topic explains what you need to do for setting up back-to-back transfer flow.

In the Oracle Product Information Management, ensure that the Item is Back-to-Back enabled.

In Oracle Global Order Promising:

1. Set up a global sourcing rule with Type as Transfer from. Set the organization as the organization requesting the transfer (example, Warehouse 1).
2. Set up a local sourcing rule for the organization (in this example, Warehouse 1) Type as Transfer from, from the organization that has the stock from which the transfer will take place (example, Warehouse 2).
3. Set up an ATP rule with the Promising Mode as Supply chain availability search.
4. Ensure that the Supply chain availability search attributes are enabled according to your requirements. For example, you might want the application to search components and resources to include on-hand or in-transit Supply Types or fulfillment lines Demand Types.
5. Set the ATP Rule Assignment as required.
6. Set the sourcing assignments for the sourcing rules that you defined in steps 1 and 2.
7. Ensure that the assignment level used for the global sourcing rule doesn't include any Organization.
8. Refresh and restart the Order Promising Server for ATP Rules and Sourcing.

With this setup:

\* The global rule is used to source the item from Warehouse 1 if there is stock available to reserve.

\* If there's no stock on hand, Global Order Promising uses the local rule to transfer the item from Warehouse 2 to Warehouse 1.

#### Answer:

Explanation:

See the Explanation for the complete solution

Explanation:

#### Set Up Back-to-Back Transfer Flow in Oracle Cloud

The Back-to-Back (B2B) Transfer Flow allows organizations to move inventory from one warehouse (source) to another warehouse (destination) when stock is unavailable in the fulfillment location. This setup ensures that Oracle Global Order Promising (GOP) can automatically determine the best supply source and execute the transfer process efficiently.

#### 1. Prerequisites: Enable Back-to-Back for Items

Before setting up the transfer flow, ensure that the item is Back-to-Back enabled in Oracle Product Information Management (PIM):

Navigate to Oracle Product Information Management (PIM).

Search for the item you want to enable for back-to-back fulfillment.

In the item definition, enable the "Back-to-Back Enabled" attribute.

Save and publish the item updates.

This ensures that the item can participate in the B2B fulfillment process.

2. Configure Global Order Promising (GOP) for Back-to-Back Transfer Flow In Oracle Global Order Promising (GOP), configure the system to determine the best transfer source when fulfilling back-to-back orders.

Step 1: Create a Global Sourcing Rule (Type: Transfer From)

Navigate to Oracle Global Order Promising (GOP).

Create a Global Sourcing Rule with the following details:

Type: "Transfer From"

Source Organization: Warehouse 1 (Requesting warehouse or fulfillment location).

This rule ensures that items are sourced from Warehouse 1 whenever stock is available.

Step 2: Create a Local Sourcing Rule (Type: Transfer From)

Create a Local Sourcing Rule for Warehouse 1 as follows:

Type: "Transfer From"

Source Organization: Warehouse 2 (Stock-holding warehouse).

This rule ensures that if Warehouse 1 does not have stock, the system transfers items from Warehouse 2.

Step 3: Set Up an ATP Rule for Availability Check

Create an ATP Rule (Available-to-Promise Rule) with the following parameters:

Promising Mode: "Supply Chain Availability Search".

Enable attributes for supply chain availability search based on business needs.

Configure ATP search to consider on-hand stock, in-transit inventory, components, and resources if needed.

This ensures that GOP can evaluate stock levels across multiple locations.

Step 4: Assign ATP Rule to Organizations

Assign the ATP Rule to the appropriate organizations.

Ensure that the rule applies to Warehouse 1 and Warehouse 2 based on their roles in the sourcing process.

This enables availability checking when processing sales orders.

Step 5: Assign Sourcing Rules to Organizations

Assign the Global Sourcing Rule to the enterprise-wide sourcing assignment.

Assign the Local Sourcing Rule to Warehouse 1, specifying Warehouse 2 as the sourcing location.

Ensure that the assignment level for the global sourcing rule does not include a specific organization (it should apply at a broader level).

This ensures that Oracle GOP prioritizes sourcing stock from Warehouse 1 first and transfers from Warehouse 2 if needed.

Step 6: Refresh and Restart Order Promising Server

Once the sourcing rules and ATP configurations are in place:

Refresh Oracle Global Order Promising (GOP) Rules.

Restart the Order Promising Server to apply sourcing and ATP rule changes.

This step ensures that all updates take effect and are used in future order promising decisions.

3. Expected Behavior After Setup

If Warehouse 1 has stock → GOP reserves inventory and processes the sales order immediately.

If Warehouse 1 does not have stock → GOP triggers a transfer order to move stock from Warehouse 2 to Warehouse 1.

Once the transfer order is fulfilled and received, the sales order is shipped to the customer.

This ensures automated order fulfillment with minimal manual intervention.

4. Benefits of Back-to-Back Transfer Flow in Oracle Cloud

✓ Optimized Inventory Utilization - Uses stock efficiently across multiple warehouses.

✓ Automated Stock Transfers - Eliminates manual intervention by automatically moving stock when needed.

✓ Reduced Procurement Costs - Moves existing inventory instead of purchasing new stock.

✓ Faster Order Fulfillment - Reduces lead times by sourcing from internal stock before procurement.

✓ Seamless Oracle Cloud Integration - Works across Oracle Order Management, Inventory, GOP, and Supply Chain Orchestration.

### NEW QUESTION # 33

What can your supplier invoices, created through spreadsheet upload for consigned inventory, be matched against?

- A. Consignment order
- B. Consignment agreement
- C. Consumption advice (\*)
- D. Receipts

Answer: C
