## Exam C-CPI-2506 Preparation | C-CPI-2506 Test Questions Vce

The SAP Certified Associate - Integration Developer (C-CPI-2506) exam questions can help you gain the high-in-demand skills and credentials you need to pursue a rewarding career. To do this you just need to pass the SAP Certified Associate - Integration Developer (C-CPI-2506) certification exam which is not easy to crack. You have to put in some extra effort, and time and prepare thoroughly to pass the SAP Certified Associate - Integration Developer (C-CPI-2506) exam. For the quick, complete, and comprehensive SAP Certified Associate - Integration Developer (C-CPI-2506) exam dumps preparation you can get help from top-notch and easy-to-use C-CPI-2506 Questions.

### SAP Certified Associate - Integration Developer Sample Questions (Q35-Q40):

#### NEW QUESTION # 35

You want to use an HTTPS endpoint from an integration flow. In which of the following must you use the HTTP client?

- A. SAP Business Application Studio
- B. API Management capability within SAP Integration Suite
- C. SAP Integration Suite, advanced event mesh
- **D. Open Connectors capability within SAP Integration Suite**

**Answer: D**

Explanation:

To use an HTTPS endpoint from an integration flow, you can use the Open Connectors capability within SAP Integration Suite. Open Connectors is a feature that allows you to connect to over 160 third-party applications using standardized and normalized APIs. You can use the HTTP client connector to make HTTP or HTTPS requests to any endpoint that supports these protocols. You can configure the HTTP client connector with various parameters, such as URL, method, headers, query parameters, body, and authentication. Reference: Open Connectors | SAP Help Portal, HTTP Client Connector | SAP Help Portal

#### NEW QUESTION # 36

You want to dispatch messages only when a child element "Product" exists. Which condition do you set?

- A. **ProductSet/count(Product)>0**
- B. /ProductSet/counter(Product)>0
- C. /ProductSet/count(Product)=0
- D. /ProductSet/count(Product)<0

**Answer: A**

Explanation:

The condition `ProductSet/count(Product)>0` checks if the number of Product elements in the ProductSet element is greater than zero, which means that a child element "Product" exists. This condition can be used to dispatch messages only when a Product element is present. Reference: SAP Integration Suite | SAP Community, Integration Software | SAP Integration Suite

#### NEW QUESTION # 37

In an Event-Driven Architecture (EDA), which architectural characteristic best limits the propagation of failure from one service to another?

- A. Centralized logging facilitates rapid failure identification.
- B. Robust error handling prevents service disruption.
- C. Asynchronous communication buffers immediate failure impact.
- D. **Loose coupling between services minimizes cascading failures.**

**Answer: D**

Explanation:

In Event-Driven Architecture, resilience is ensured by:

Loose coupling # Services do not depend on each other's runtime availability. A failure in one service does not directly impact others.

This design minimizes cascading failures that can occur in tightly coupled systems.

Asynchronous communication and error handling help further, but loose coupling is the fundamental characteristic that limits failure propagation.

Incorrect options:

A # Robust error handling is important but not the main architectural limiter of cascading failures.

C # Centralized logging helps with troubleshooting, not failure prevention.

D # Asynchronous buffering mitigates impact but loose coupling fundamentally prevents direct propagation.

#### NEW QUESTION # 38

What are some message protocols that the API Management capability within SAP Integration Suite supports? Note: There are 3 correct answers to this question.

- A. **SOAP**
- B. **Data**
- C. **REST**
- D. RFC
- E. IDoc

**Answer: A,B,C**

Explanation:

The API Management capability within SAP Integration Suite supports the following message protocols: SOAP, REST, and Data.

SOAP is a protocol for exchanging structured XML messages between web services. REST is an architectural style for designing web services that use HTTP methods and formats. Data is a protocol for sending and receiving binary or text data over HTTP or HTTPS. Reference: Integration Software | SAP Integration Suite, Modernize Integration with SAP Integration Suite | openSAP

### NEW QUESTION # 39

You have set up an integration process to use a SOAP adapter. Which event allows you to run the integration flow directly after deployment?

- A. End Event
- B. End Message
- C. Start Message
- D. Start Event

**Answer: C**

Explanation:

A Start Message event allows you to run the integration flow directly after deployment. A Start Message event is triggered when a message arrives at the integration flow through an inbound channel, such as a SOAP adapter. You can use a Start Message event to initiate an integration process based on a message input. Reference: Modernize Integration with SAP Integration Suite | openSAP

### NEW QUESTION # 40

.....

Our C-CPI-2506 study materials selected the most professional team to ensure that the quality of the C-CPI-2506 learning guide is absolutely leading in the industry, and it has a perfect service system. The focus and seriousness of our study materials gives it a 99% pass rate. Using our products, you can get everything you want, including your most important pass rate. C-CPI-2506 Actual Exam is really a good helper on your dream road.
