I hope you can spend a little time free downloading our demo of our Sharing-and-Visibility-Architect exam questions, then you will know the advantages of our Sharing-and-Visibility-Architect study materials!

Salesforce Sharing-and-Visibility-Architect Certification Exam is a challenging exam that requires a deep understanding of the Salesforce platform. Sharing-and-Visibility-Architect exam covers a range of topics, including sharing models, sharing rules, role hierarchies, manual sharing, and record ownership. It also tests your ability to design sharing and visibility solutions that meet the needs of your organization. To qualify for this certification, you must have a minimum of five years of experience designing and implementing Salesforce sharing and visibility solutions.

Salesforce Certified Sharing and Visibility Architect Exam is important because it validates an individual's knowledge and expertise in one of the most critical aspects of the Salesforce platform. Sharing and visibility are essential for ensuring that the right people have access to the right data at the right time. By passing Sharing-and-Visibility-Architect Exam, individuals can demonstrate their ability to design and implement effective sharing and visibility solutions for their organizations.

Salesforce Certified Sharing and Visibility Architect Sample Questions (Q57-Q62):

NEW QUESTION # 57
Sales managers want their team members to help each other close Opportunities. The Opportunity and Account organization-wide defaults are private. To grant Opportunity access to sales reps on the same team, owner ship-based sharing rules were created for each team.
What is the side effect of this approach?

- A. All sales reps will have Read access to Accounts for all Opportunities.
- B. All sales reps will have Read access to all Accounts.
- C. Sales reps on the same team will have Read access to the Accounts for Opportunities owned by their team members.
- D. Sales Reps on the same team will have Edit access to the Accounts for Opportunities owned by then team members.

Answer: C

Explanation:
Explanation
The side effect of this approach is that sales reps on the same team will have read access to the accounts for opportunities owned by their team members. This is because owner-based sharing rules grant access to both the parent and child records of the same object. For example, if a sharing rule grants access to opportunities owned by a certain role, it also grants access to the accounts associated with those opportunities. All sales reps will not have read access to accounts for all opportunities, as the sharing rules are based on ownership. Sales reps on the same team will not have edit access to the accounts for opportunities owned by their team members, as owner-based sharing rules only grant read or read/write access to child records, not parent records. All sales reps will not have read access to all accounts, as the account organization-wide default is private.

NEW QUESTION # 58
A sales coach at Universal Containers wants to create and share a report folder with other sales coaches.
Which two permissions are required to accomplish this?

- A. Create and customize Reports and Report Folders
- B. Create Report Folders and manage Reports in Public Folders
- C. Manage Reports in Public Folders and edit My Reports

Answer: C

NEW QUESTION # 59
Universal Containers has a strict security model enforced through object, field, and row-based security mechanisms. The Architect would like to ensure the security model is being thoroughly tested using Apex automated tests. Which three considerations should be made when using the runAs() method to design Apex until tests?

- A. runAs() does not enforce user permissions or field-level permissions in test classes
- B. runAs () counts towards total DML statements issued within transaction
- C. runAs() can be used outside of test classes to bypass record-level security
- D. runAs() can be used inside of test classes to validate field-level permissions
- E. runAs() can be used inside of test classes to validate record-level security

Answer: A,B,E

NEW QUESTION # 60

Universal Containers (UC) has a mostly private organization-wide default (OWD), as it is a core principle of UC to respect client data privacy. UC has implemented complex processes for granting access to Opportunity dat a. A few key members of the Sales Reporting team need to always be able to see, but not change, Opportunity data for all Opportunities.

What should an architect recommend as an approach to meet these requirements?

- A. Make Opportunity OWD read-only.
- B. Create a Permission Set that grants "View All" permission for Opportunity.
- C. Create a Permission Set that grants "View All Data" Permission.
- D. Give "View All Data" Permission to the Sales Reporting Profile.

Answer: B

NEW QUESTION # 61

Which two capabilities does the delegated administrator permission provide?
Choose 2 answers

- A. Assign users profiles
- B. Create profiles
- C. Unlock users
- D. Set OWD

Answer: A,C

Explanation:
Explanation
Assigning users profiles and unlocking users are two capabilities that the delegated administrator permission provides. Delegated administrators are users who can perform certain administrative tasks on behalf of administrators. These tasks include assigning users to specified profiles or permission sets, creating and editing users in specified roles or groups, unlocking users who have exceeded their login attempts limit, resetting passwords for users in specified roles or groups, logging in as users who have granted login access to administrators. Option C is incorrect, since setting OWD is not a capability that delegated administrators have.
Option D is incorrect, since creating profiles is not a capability that delegated administrators have.

NEW QUESTION # 62
