2026 Valid AD0-E724 Exam Test | Professional Exam AD0-E724 Book: Commerce Developer Professional

We would like to benefit our customers from different countries who decide to choose our AD0-E724 study guide in the long run, so we cooperation with the leading experts in the field to renew and update our AD0-E724 learning materials. Our leading experts aim to provide you the newest information in this field in order to help you to keep pace with the times and fill your knowledge gap. As long as you bought our AD0-E724 Practice Engine, you are bound to pass the AD0-E724 exam for sure.

Adobe Commerce Developer Professional Sample Questions (Q141-Q146):

NEW QUESTION # 141

A custom theme is being developed in the Adobe Commerce store, and the developer needs to override the current parent theme styles.

Which less file should the developer use to achieve this goal?

- A. `_theme.override.less`
- B. `_theme.less`
- C. `_source.less`

Answer: B

Explanation:

To override the current parent theme styles in a custom theme being developed for Adobe Commerce, the developer should use the `_theme.less` file. This file is specifically designed for customizing and overriding the default styles provided by the parent theme, making option B the correct choice. The `_theme.less` file is a central place for theme-specific customizations.

NEW QUESTION # 142

How would a developer turn on outgoing emails on an Adobe Commerce Cloud Staging environment?

- A. Access the Project Web Interface and select the Staging environment.
Select Configure environment.
Toggle Outgoing emails On
- B. From the command line
magento-cloud environment:info -p <project-id> -e <environment-id> enable_smtp true
- C. From the command line
ece-tools enable_smtp true

Answer: A

Explanation:

The developer can turn on outgoing emails on an Adobe Commerce Cloud Staging environment by accessing the Project Web Interface and selecting the Staging environment. Then, the developer can select Configure environment and toggle Outgoing emails On. This will enable the SMTP service for the Staging environment and allow emails to be sent from the application. Verified References: [Magento 2.4 DevDocs] 1 In Adobe Commerce Cloud, email functionality for Staging and Production environments can be controlled through the Project Web Interface. To enable outgoing emails, you can toggle the setting from within the environment configuration.

* Using the Project Web Interface:

* Navigate to the Project Web Interface, select the Staging environment, and configure the environment settings. Here, you can enable or disable outgoing emails with a simple toggle.

* Why Option C is Correct:

* This method directly interacts with Adobe Commerce Cloud's environment settings through the GUI. Options A and B are not valid commands in Adobe Commerce Cloud for enabling SMTP or email.

NEW QUESTION # 143

A developer found a bug inside a private method of a third party module class. How can the developer override the method?

- A. Create a custom class with corrected logic, and define the class as preference in the preferences.xml.
- B. Create a plugin, implement correct logic in the after" method, and then define the plugin in the di.xml.
- C. Create a custom class with the corrected logic, and define the class as a preference for original one in the di.xml.

Answer: C

Explanation:

To override a private method in a third-party module class, the most effective approach is to use a preference.

This involves creating a custom class with the corrected logic and then defining this class as a preference for the original one in the di.xml file. Plugins cannot be used to override private methods, final methods, final classes, or classes created without dependency injection. Therefore, the preference mechanism, which allows for the substitution of the entire class, becomes the viable method to override a private method and modify its behavior.

NEW QUESTION # 144

A seller would like to offer an electronic version of an album by selling each song individually. Which layout can be used to customize a product page layout for this item?

- A. catalog_product_view_type_configurable
- B. catalog_product_view_type_downloadable
- C. catalog_product_view_category

Answer: B

Explanation:

The catalog_product_view_type_downloadable layout can be used to customize a product page layout for a downloadable product. This layout includes the product details, the product reviews, and the download links for the product's files.

For selling electronic versions of albums with individual songs, the downloadable product type in Adobe Commerce is appropriate.

To customize the product page layout specifically for downloadable items, the layout

handlecatalog_product_view_type_downloadable is used. This layout handle allows developers to target downloadable products

specifically and apply custom layouts or templates, making option A correct.

NEW QUESTION # 145

An Adobe Commerce developer has created a process that exports a given order to some external accounting system. Launching this process using the Magento CLI with the command `php bin/magento my_module:order:process` is required.

order:process --order_id=<order_id> is required.

Example: `php bin/magento my_module:order:process --order_id=1245`.

What is the correct way to configure the command?

- A.

```
protected function configure()
{
    $this->setName('my_module:order:process');
    $this->setDescription('Processes an order');
    $this->addArgument('order_id', InputArgument::REQUIRED, 'Order ID');
    parent::configure();
}
```

- B.

```
protected function configure()
{
    $this->setName('my_module:order:process');
    $this->setDescription('Processes an order');
    $this->addOption('order_id', null, InputOption::VALUE_REQUIRED, 'Order ID');
    parent::configure();
}
```

- C.

```
protected function configure()
{
    $this->setName('my_module:order:process');
    $this->setDescription('Processes an order');
    parent::configure();
}

protected function values()
{
    return [new InputValue('order_id', InputValue::REQUIRED, 'Order ID')];
}
```

- D.

```
protected function configure()
{
    $this->setName('my_module:order:process');
    $this->setDescription('Processes an order');
    $this->addOption('order_id', null, InputOption::VALUE_REQUIRED, 'Order ID');
    $this->setName('my_module:order:process');
    $this->setDescription('Processes an order');
    $this->addArgument('order_id', InputArgument::REQUIRED, 'Order ID');
    parent::configure();
}
```

Answer: A

Explanation:

To properly configure a Magento CLI command that includes a required argument, such as `--order_id`, which is mandatory for processing an order, the best approach is to use the `addArgument` method within the `configure` function. This method defines required arguments for the command, ensuring the user provides the necessary data.

Option D is correct for the following reasons:

* Using `addArgument` for Required Inputs: The `addArgument` method is used here to declare `order_id` as a required argument. This is more appropriate than `addOption` when the parameter is essential for command execution and should not be omitted. By specifying `InputArgument::REQUIRED`, the command ensures that the `order_id` must be provided by the user.

* Explanation: `addArgument` is ideal for required data that the command cannot function without, while `addOption` is typically used for optional parameters. `order_id` is essential to identify which order to process, making `addArgument` the suitable choice here.

NEW QUESTION # 146

.....

VCE4Plus is a trusted and reliable platform that has been helping Commerce Developer Professional (AD0-E724) exam candidates for many years. Over this long time period countless Adobe AD0-E724 exam questions candidates have passed their dream AD0-E724 Certification Exam. They all got help from VCE4Plus Adobe Exam Questions and easily passed their challenging AD0-E724 pdf exam.
