ChromeOS-Administrator Online Prüfung - ChromeOS-Administrator Schulungsangebot

Als der professionelle Lieferant der IT-Zertifizierungsunterlagen, bieten wir DeutschPrüfung immer die besten Unterlagen für Kandidaten und helfen vielen Leuten, die Google ChromeOS-Administrator Prüfung zu bestehen. Mit denen Google ChromeOS-Administrator Dumps von DeutschPrüfung können Sie mehr selbstbewusster werden. Bei guter Nutzung der Dumps können Sie in sehr kurzer Zeit, die Google ChromeOS-Administrator Prüfung zu bestehen. Finden Sie es unglaublich? Aber es ist wirklich. Wenn Sie diese Unterlagensfragen von DeutschPrüfung benutzen, können Sie das Wunder sehen.

Google ChromeOS-Administrator Prüfungsplan:

Thema	Einzelheiten
Thema 1	• Understand ChromeOS tenets: It discusses ChromeOS best practices and customers on chromeOS tenets.
Thema 2	• Understand ChromeOS security processes: It focuses on deploying certificates and uChromeOS policies.
Thema 3	• Identity Management: The primary focus of the topic identity management is on identity features.
Thema 4	• Configure ChromeOS policies: This topic discusses understanding and configuring ChromeOS policies.

- Perform actions from the Admin console: This topic delves into troubleshooting customer concerns, setting up a trial, pushing applications, and performing device actions from the Admin console.

Google Professional ChromeOS Administrator Exam ChromeOS-Administrator Prüfungsfragen mit Lösungen (Q63-Q68):

63. Frage

As your organization's administrator, you want to assign a delegated admin custom role in order to perform a limited set of ChromeOS device management tasks only for the Marketing organizational unit. What should you do?

- A. Create and assign a super admin role
- B. Create and assign a custom role with "Chrome Management permissions" for the Marketing Users OU
- **C. Create and assign a custom role with "Chrome Management permissions" for the Marketing devices OU**
- D. Create and assign a custom role with "Chrome Management permissions" for the root OU

Antwort: C

Begründung:

To delegate ChromeOS device management specifically for the Marketing OU, create a custom role with "Chrome Management permissions" and assign it specifically to the Marketing devices OU. This ensures that the delegated admin can manage only the devices within that specific OU without impacting the entire organization.

Verified Answer from Official Source:

The correct answer is verified from the Google Admin Console Role Management Guide, which recommends assigning roles at the appropriate OU level for granular access control.

"Assign roles to specific OUs to limit administrative control to relevant organizational units, such as the Marketing devices OU." By targeting the role to the Marketing devices OU, you ensure that the delegated admin does not have unnecessary access to devices in other parts of the organization, maintaining the principle of least privilege.

Objectives:

- * Implement delegated administration for specific OUs.
- * Limit administrative scope to enhance security.

64. Frage

Which remote command is required to remove a device from management policy updates?

- A. Powerwash
- B. Disable
- **C. Deprovision**
- D. Reset

Antwort: C

Begründung:

The "Deprovision" command is specifically designed to remove a ChromeOS device from management policy updates. This means the device will no longer receive updates, configurations, or restrictions pushed from the Google Admin console.

Here's what happens when you deprovision a device:

- * Policy Removal: All enterprise policies and configurations are removed from the device.
 - * Management Removal: The device is disassociated from the Google Admin console and no longer considered managed.
 - * Data Wipe (Optional): You can choose to wipe the device's data during deprovisioning to ensure no company data remains.
- Other options like "Reset," "Disable," or "Powerwash" may have different effects:
- * Reset: Resets the device to factory settings but might not remove management if not done through the Admin console.
 - * Disable: Prevents the user from signing in but doesn't remove policies or management.
 - * Powerwash: Factory resets the device, removing all user data and configurations, including management.

65. Frage

How should you generate a custom admin role?

- A. Add user to security admin group
- B. Set privileges on the user directly
- C. Add user to admin role OU
- **D. Create admin role and assign privileges**

Antwort: D

Begründung:

To create a custom admin role in the Google Admin console, you need to create the role and then assign the required privileges. This method allows for precise control over what the delegated admin can manage, adhering to the principle of least privilege.

Verified Answer from Official Source:

The correct answer is verified from the Google Admin Console Roles and Permissions Guide, which explains the process of creating and assigning custom roles.

"To create a custom admin role, go to Admin Console > Admin roles, create a new role, and assign the necessary privileges."

Creating a custom role is essential when you need specific permissions to be delegated without granting full admin access, ensuring both security and operational efficiency.

Objectives:

- * Implement role-based access control (RBAC).
- * Delegate admin tasks securely.

66. Frage

You have been tasked with selecting a 3rd party IdP to allow logging into ChromeOS devices. Your ChromeOS devices are displaying an "Unable to sign in to Google" message. How should you troubleshoot this?

- **A. Ensure the Identity provider is using an SAML compliant connection**
- B. Apply the SSO certificate to the ChromeOS device
- C. Disable the SSO connection in the Google Admin console
- D. Check Multi-Factor Authentication for the user account in the Google Admin console

Antwort: A

Begründung:

The error message "Unable to sign in to Google" in the context of 3rd party IdP login typically points towards an issue with the SAML (Security Assertion Markup Language) connection. SAML is the standard protocol used for authentication between ChromeOS devices and external identity providers.

Here's a breakdown of troubleshooting steps:

- * **Verify SAML Compliance:** The most critical step is to ensure that the 3rd party IdP is configured correctly to use SAML 2.0 and is adhering to the required SAML attributes and formatting.
- * **Check IdP Configuration:** Review the SAML configuration settings in both the Google Admin console (under Security > Set up single sign-on (SSO) with a third party IdP) and the 3rd party IdP's administration portal. Ensure that the entity IDs, SSO URLs, and certificate information match exactly.
- * **Test SAML Connection:** Use a SAML testing tool (e.g., SAML Tracer) to simulate the login process and inspect the SAML assertions. This can help pinpoint any errors or inconsistencies in the SAML response.
- * **Google Admin Console Logs:** Check the Google Admin console logs for any relevant error messages related to the SAML authentication process.
- * **Contact IdP Support:** If the issue persists, reach out to the support team of your 3rd party IdP for further assistance. They may have specific troubleshooting steps or logs to help diagnose the problem.

- * Set up single sign-on (SSO) with a third party IdP: <https://support.google.com/a/answer/60224>

67. Frage

Your organization's security protocols require you to ensure that any unattended devices log the user out after 24 hours. You have 1000 ChromeOS devices to manage. How would you implement this with the least amount of admin effort?

- A. Force-install a custom app to each device in question that notifies the user that they need to sign out of their device after 24 hours
- B. You can remotely access each device and sign out of the user account using Chrome Remote Desktop
- C. Create a corporate policy stating the users are to manually sign out after the end of every shift
- **D. Enable the 'User and Browser Settings' and update 'Maximum user session length' to any time up to 24 hours**

Antwort: D

Begründung:

This is the most efficient method as it applies the setting to all devices within the organizational unit (OU) through a single policy change in the Admin console.

The other options are less efficient:

- * Corporate policy: Relies on user compliance and is difficult to enforce.
- * Chrome Remote Desktop: Requires manual intervention for each device.
- * Custom app: Adds complexity and potential security risks.

68. Frage

.....

Viele Menschen haben Sorgen darum, dass sie in der Prüfung durchfallen, auch wenn sie sich schon lange auf Google ChromeOS-Administrator Prüfung vorbereitet, nur weil sie nicht an der Prüfungsatmosphäre gewöhnt sind. Deshalb bieten wir Ihnen die Möglichkeit, vor der Prüfung die realistische Prüfungsatmosphäre zu erfahren. Google ChromeOS-Administrator Simulierte-Software enthält zahlreiche Prüfungsaufgaben mit ausführliche Erklärungen der Antworten von den Experten. Damit können Sie Ihre Fähigkeit verbessern und ausreichende Vorbereitung der Google ChromeOS-Administrator Prüfung haben.
