2V0-17.25 valid Pass4sures torrent & 2V0-17.25 useful study vce

ITExamSimulator 2V0-17.25 Questions have helped thousands of candidates to achieve their professional dreams. Our VMware Cloud Foundation 9.0 Administrator (2V0-17.25) exam dumps are useful for preparation and a complete source of knowledge. If you are a full-time job holder and facing problems finding time to prepare for the VMware 2V0-17.25 Exam Questions, you shouldn't worry more about it.

VMware 2V0-17.25 Exam Syllabus Topics:

Topic	Details
Topic 1	• IT Architectures, Technologies, Standards: This section of the exam measures the skills of Cloud Architects and focuses on understanding the broader context of IT architectures, common technologies, and industry standards. While it does not have testable objectives, it sets the foundation for how VMware Cloud Foundation aligns with enterprise cloud strategies.
Topic 2	• VMware Cloud Foundation Fundamentals: This section of the exam measures the skills of Private Cloud Engineers and covers the basic building blocks of VMware Cloud Foundation. It includes the vision and use cases for private cloud, along with the value it provides to businesses. Candidates are expected to understand compute fundamentals such as deploying and managing vCenter, ESXi, clusters, and virtual machines. Storage fundamentals include configuring vSphere storage, setting up vSAN clusters, applying storage policies, and understanding resilience options. Networking fundamentals are also assessed, with a focus on configuring connectivity, fabrics, routing, and network services in a VMware environment.
Topic 3	• Plan and Design the VMware by Broadcom Solution: This section of the exam measures the skills of Solution Designers and emphasizes the ability to plan and design VMware by Broadcom solutions. Although no testable objectives are defined here, it reinforces the importance of architectural planning and design considerations for large-scale cloud deployments.

Topic 4	• Deploy, Configure, and Operate VMware Cloud Foundation (VCF): This section of the exam measures the skills of VCF Administrators and goes in-depth into deploying, configuring, and managing VMware Cloud Foundation. The deployment portion covers identifying deployment models, configuring private cloud environments, and setting up workload domains and networking. The management objectives focus on lifecycle operations such as fleet management, identity and role-based access, licensing, certificate handling, and importing existing vCenters. Operations are assessed through capabilities like monitoring health, logs, networks, and storage, along with creating dashboards, configuring alerts, and ensuring compliance. The automation portion evaluates skills in using VCF Automation for multi-tenancy, provider networking, content libraries, governance policies, and extensibility to automate business processes. It also includes knowledge of deploying Supervisor-based services within Cloud Foundation.

Splendid 2V0-17.25 Exam Braindumps are from High-quality Learning Quiz - ITExamSimulator

Therefore, if you have struggled for months to pass VMware Cloud Foundation 9.0 Administrator 2V0-17.25 exam, be rest assured you will pass this time with the help of our VMware Cloud Foundation 9.0 Administrator 2V0-17.25 exam dumps. Every VMware Cloud Foundation 9.0 Administrator 2V0-17.25 candidate who has used our exam preparation material has passed the exam with flying colors. Availability in different formats is one of the advantages valued by VMware Cloud Foundation 9.0 Administrator exam candidates. It allows them to choose the format of VMware Cloud Foundation 9.0 Administrator 2V0-17.25 Dumps they want.

VMware Cloud Foundation 9.0 Administrator Sample Questions (Q100-Q105):

NEW QUESTION # 100
When troubleshooting an ESXi host that is intermittently disconnecting from vCenter, which actions might help identify the root cause?

- A. Pinging the ESXi host management IP address from vCenter
- B. Disabling DRS and HA on the entire cluster
- C. Checking the vmkernel logs on the ESXi host
- D. Verifying port connectivity on firewalls or management networks

Answer: A,C,D

Explanation:
ESXi logs contain detailed error messages, network connectivity tests (ping) can reveal latency or packet loss, and ensuring firewall ports are open is crucial. Disabling DRS and HA (C) might be a troubleshooting step in some cases, but it does not directly address connectivity issues.

NEW QUESTION # 101
Which statement describes a Container Storage Interface (CSI) in vSphere Supervisor?

- A. It is a plug-in that is only used for clusters which require cloud native storage.
- B. It is a plug-in that allows providers to expose storage as persistent storage.
- C. It is a plug-in that only works with vSphere object storage.
- D. It is a plug-in that is required for ephemeral storage.

Answer: B

Explanation:
The VMware Cloud Foundation 9.0 and vSphere with Tanzu documentation describes the Container Storage Interface (CSI) as follows:
"The vSphere CSI driver allows vSphere storage to be exposed as persistent storage to containerized applications running on Kubernetes clusters. The driver implements the Kubernetes CSI specification and enables dynamic provisioning, attach/detach, and

snapshot operations for persistent volumes." Key points from the documentation:

CSI is not limited to vSphere object storage (A). It works with vSAN, VMFS, NFS, and other vSphere-supported datastores.

Its purpose is to provide persistent storage (B), so containerized workloads have data that outlives pod lifecycles.

CSI is not restricted to "cloud native storage only" (C); it is the standard interface for Kubernetes persistent storage.

CSI is not used for ephemeral storage (D); ephemeral storage is provided by local container runtimes and does not require CSI.

Therefore, the correct description is that CSI is a plug-in that allows providers to expose storage as persistent storage to Kubernetes workloads running in vSphere Supervisor clusters.

Reference:

VMware Cloud Foundation 9.0 - vSphere with Tanzu Storage Documentation.

vSphere CSI Driver Guide (Persistent Volume provisioning, dynamic storage for Kubernetes workloads).

NEW QUESTION # 102

Which two are use cases for VMware Cloud Foundation (VCF) Automation? (Choose two.)

- A. Provide a Self-Service Catalog.
- B. Implement VMware Cloud Foundation Virtual Private Cloud (VPC).
- C. Deploy VMware Private AI Foundation with NVIDIA Workloads.
- D. Provide application dependency mapping.
- E. Implement alerting based on resource utilization.

Answer: A,D

Explanation:

Self-Service Catalog - VCF Automation Service Broker provides a catalog for developers and operators to request services and blueprints.

Application Dependency Mapping - achieved through integration with VCF Operations for Networks.

Developers can discover application relationships and map dependencies through automated workflows in VCF Automation.

NEW QUESTION # 103

An organization is integrating VMware vCenter with Active Directory (AD) to streamline user authentication. As part of this process, the administrator needs to add AD as an identity source in vCenter.

Which three steps must be performed to successfully add AD as an identity source? (Choose three.)

- A. Select 'Identity Sources' and choose 'Active Directory Domain'.
- B. Configure DNS settings on all ESXi hosts to point to the AD DNS servers.
- C. Enter the Domain Name and the credentials of an AD user with a minimum of read-only access to Base DN for users and groups.
- D. Reboot the vCenter to apply the identity source settings.
- E. Navigate to the vCenter Single Sign-On configuration in the vSphere Client.
- F. Create an Active Directory object for the vCenter Server Appliance.

Answer: A,C,E

Explanation:

You must provide the AD domain name plus credentials (read-only is sufficient) to bind and query the Base DN for users and groups.

In the vSphere Client's Identity Sources section, choose "Active Directory Domain" when adding a new source.

These options are found under Administration → Single Sign-On → Configuration → Identity Sources in the vSphere Client.

NEW QUESTION # 104

An organization wants to centralize its VM templates, ISO images, and scripts to streamline deployment processes across multiple sites using Content Libraries.

Which three steps are required to create a new Content Library? (Choose three.)

- A. Add the necessary permissions to allow users to upload content to the library.
- B. Choose "Create a new library" and enter a name and description for the library.
- C. Navigate to the Content Libraries section in the vSphere Client.

- D. Select "Local content library" and choose the datastore to store the library contents.
- E. Configure the library to automatically sync with the vSphere Update Manaqer.

Answer: B,C,D

Explanation:
When creating a new Content Library, you first need to specify a name and description to define the library's purpose.
For a Local Content Library, you need to choose the datastore where the library contents will be stored.
This is essential for proper organization and accessibility of content.
To create and manage content libraries, you must navigate to the Content Libraries section in the vSphere Client.

NEW QUESTION # 105

......

VMware 2V0-17.25 is a certification exam to test IT expertise and skills. If you find a job in the IT industry, many human resource managers in the interview will reference what VMware related certification you have. If you have VMware 2V0-17.25 Certification, apparently, it can improve your competitiveness.
