最新的 Network Security Administrator NetSec-Pro 免費考試真題 (Q26-Q31):

問題 #26

When configuring Security policies on VM-Series firewalls, which set of actions will ensure the most comprehensive Security policy enforcement?

- A. Configure a block policy for all malicious inbound traffic, configure an allow policy for all outbound traffic, and update regularly with dynamic updates.
- B. Configure port-based policies, check threat logs weekly, conduct software updates annually, and enable decryption.
- C. Configure policies using User-ID and App-ID, enable decryption, apply appropriate security profiles to rules, and update regularly with dynamic updates.
- D. Configure all default policies provided by the firewall, use Policy Optimizer, and adjust security rules after an incident occurs.

答案：C

解題說明：

Acomprehensive security approachuses:

* User-IDfor identity-based policies
* App-IDfor application-based security
* Decryptionto inspect encrypted traffic
* Security profilesto enforce protections
* Dynamic updatesto ensure up-to-date threat coverage

"For comprehensive security, combine User-ID, App-ID, decryption, and security profiles. Keep the firewall updated with dynamic content updates to maintain the strongest security posture." (Source: Best Practices for Security Policy) This ensures real-time, identity-aware, and application-centric security enforcement.

問題 #27

A company has an ongoing initiative to monitor and control IT-sanctioned SaaS applications. To be successful, it will require configuration of decryption policies, along with data filtering and URL Filtering Profiles used in Security policies. Based on the need to decrypt SaaS applications, which two steps are appropriate to ensure success? (Choose two.)

- A. Create new self-signed certificates to use for decryption.
- B. Configure SSL Forward Proxy.
- C. Configure SSL Inbound Inspection.
- D. Validate which certificates will be used to establish trust.

答案：**B,D**

解題說明：
To inspect SaaS app traffic (often encrypted), you must configure:
SSL Forward Proxy
"The SSL Forward Proxy decryption profile enables the firewall to decrypt outbound SSL traffic, essential for visibility into SaaS app usage." (Source: SSL Forward Proxy Overview) Validate certificates
"Validating and deploying the appropriate root and intermediate CA certificates is critical for establishing trust and preventing SSL errors during decryption." (Source: Certificate Deployment and Validation) Without these steps, SaaS decryption and policy enforcement would be incomplete.

問題 #28
Which method in the WildFire analysis report detonates unknown submissions to provide visibility into real-world effects and behavior?

- A. Machine learning (ML)
- B. Dynamic analysis
- C. Static analysis
- D. Intelligent Run-time Memory Analysis

答案：**B**

解題說明：
Dynamic analysisin WildFire refers to executing unknown files in a controlled environment (sandbox) to observe their real-world behavior. This allows the firewall to detect zero-day threats and advanced malware by directly analyzing the file's impact on a system.
"WildFire dynamic analysis detonates unknown files in a secure sandbox environment, analyzing real-world effects, behaviors, and potential malicious activity." (Source: WildFire Analysis)

問題 #29
A network security engineer needs to implement segmentation but is under strict compliance requirements to place security enforcement as close as possible to the private applications hosted in Azure. Which deployment style is valid and meets the requirements in this scenario?

- A. On a PA-Series NGFW, configure several Layer 3 zones with Layer 3 interfaces assigned to logically segment the network.
- B. On a PA-Series NGFW, configure several Layer 2 zones with Layer 2 interfaces assigned to logically segment the network.
- C. On a VM-Series NGFW, configure several Layer 2 zones with Layer 2 interfaces assigned to logically segment the network.
- D. On a VM-Series NGFW, configure several Layer 3 zones with Layer 3 interfaces assigned to logically segment the network.

答案：**D**

解題說明：
In cloud environments like Azure, theVM-Series NGFWis deployed to createLayer 3 segmentation zones closest to the application workloads.
"In Azure, deploy VM-Series firewalls in Layer 3 mode to enforce security policies closest to private applications, meeting strict compliance and segmentation requirements." (Source: VM-Series in Public Clouds) Layer 3 segmentation ensures security policies are enforced at the right boundary to isolate traffic within Azure's virtual networks.

問題 #30
Which two features can a network administrator use to troubleshoot the issue of a Prisma Access mobile user who is unable to access SaaS applications? (Choose two.)

- A. Capacity Analyzer
- B. GlobalProtect logs

- C. SaaS Application Risk Portal
- D. Autonomous Digital Experience Manager (ADEM) console

答案：B,D

解題說明：
GlobalProtect logs
These logs provide detailed insights into the user's connectivity, tunnel status, and authentication events.
"GlobalProtect logs include detailed information about connection establishment, tunnel negotiation, and any errors that can prevent mobile users from accessing applications." (Source: GlobalProtect Troubleshooting) Autonomous Digital Experience Management (ADEM) ADEM helps visualize end-to-end performance and identifies network issues affecting SaaS app access for mobile users. "ADEM provides real-time and historical visibility into user experience, enabling quick identification and resolution of connectivity or performance issues for SaaS applications." (Source: ADEM for Prisma Access)
