

# Free 305-300 Exam Questions Updates By It-Tests

2026 Latest It-Tests 305-300 PDF Dumps and 305-300 Exam Engine Free Share: <https://drive.google.com/open?id=1wdoigfQ2A4DG3genFnll8tmIxtent1A>

Mercenary men lust for wealth, our company offer high quality 305-300 practice engine rather than focusing on mercenary motives. They are high quality and high effective 305-300 training materials and our efficiency is expressed clearly in many aspects for your reference. The first one is downloading efficiency. The second is expressed in content, which are the proficiency and efficiency of 305-300 Study Guide. You will love our 305-300 exam questions as long as you have a try!

Lpi 305-300 exam covers a range of topics related to virtualization and containerization. These include the installation and configuration of virtualization software, the creation and management of virtual machines, and the deployment and management of containerized applications. 305-300 Exam also covers important security considerations when working with virtualized and containerized environments, as well as performance optimization techniques.

## Make Exam Preparation Simple Lpi 305-300 Exam Questions

With the rapid development of the world economy and frequent contacts between different countries, looking for a good job has become more and more difficult for all the people. So it is very necessary for you to get the 305-300 certification, in order to look for a good job, you have to increase your competitive advantage in the labor market and make yourself distinguished from other job-seekers. And our 305-300 Exam Questions are specially designed for you as we can help you pass the 305-300 exam successfully with the least time and effort. Just come and buy our 305-300 practice guide!

## Lpi LPIC-3 Exam 305: Virtualization and Containerization Sample Questions (Q89-Q94):

### NEW QUESTION # 89

Which command within virsh lists the virtual machines that are running on the current host?

- A. I view
- B. show
- C. list
- D. list-all
- E. list-vm

**Answer: C**

### NEW QUESTION # 90

Which directory is used bycloud-initto store status information and configuration information retrieved from external sources?

- A. /opt/cloud/var/

- B. /proc/sys/cloud/
- C. /etc/cloud-init/cache/
- D. /var/lib/cloud/
- E. /tmp/.cloud/

**Answer: D**

Explanation:

Explanation

cloud-init uses the /var/lib/cloud/ directory to store status information and configuration information retrieved from external sources, such as the cloud platform's metadata service or user data files. The directory contains subdirectories for different types of data, such as instance, data, handlers, scripts, and sem. The instance subdirectory contains information specific to the current instance, such as the instance ID, the user data, and the cloud-init configuration. The data subdirectory contains information about the data sources that cloud-init detected and used. The handlers subdirectory contains information about the handlers that cloud-init executed.

The scripts subdirectory contains scripts that cloud-init runs at different stages of the boot process, such as per-instance, per-boot, per-once, and vendor. The sem subdirectory contains semaphore files that cloud-init uses to track the execution status of different modules and stages. References:

## NEW QUESTION # 91

FILL BLANK

What is the default path to the Docker daemon configuration file on Linux? (Specify the full name of the file, including path.)

**Answer:**

Explanation:

/etc/docker/daemon.json

Explanation:

The default path to the Docker daemon configuration file on Linux is /etc/docker/daemon.json. This file is a JSON file that contains the settings and options for the Docker daemon, which is the service that runs on the host operating system and manages the containers, images, networks, and other Docker resources. The /etc

/docker/daemon.json file does not exist by default, but it can be created by the user to customize the Docker daemon behavior. The file can also be specified by using the --config-file flag when starting the Docker daemon. The file must be a valid JSON object and follow the syntax and structure of the dockerd reference docs<sup>12</sup>. References:

## NEW QUESTION # 92

Which of the following commands are needed to establish a private network between two (or more) KVM virtual machines that is not visible to other KVM instances on the same KVM host? (Choose THREE correct answers.)

- A. ipconfig
- B. brctl
- C. ebtables
- D. ifconfig
- E. tunctl

**Answer: B,D,E**

Explanation:

To establish a private, isolated network between KVM virtual machines on the same host, Linux networking tools are used to create and manage virtual network bridges and TAP interfaces. According to KVM and Linux virtualization documentation, the core components required are brctl, tunctl, and ifconfig (or the modern ip command).

The brctl utility is used to create and manage Linux bridge interfaces, which act as virtual switches connecting multiple virtual machines. tunctl is used to create TAP interfaces that allow virtual machines to connect to the bridge. ifconfig is used to bring interfaces up and assign network parameters.

ebtables is not strictly required for creating a private network; it is used for filtering Ethernet frames. ipconfig is a Windows networking

command and is not applicable to Linux systems.  
Therefore, the correct and documented answers are B, D, and E.

### NEW QUESTION # 93

Which of the following statements are true of full virtualization? (Select THREE correct answers)

- A. Full virtualization requires time and system resources for emulation
- B. Full virtualization is faster than paravirtualization
- C. Full virtualization works through CPU emulation
- D. Full virtualization requires no modification to the Guest OS kernel
- E. Full virtualization has superior I/O performance through emulated device drivers

**Answer: A,C,D**

Explanation:

Full virtualization allows unmodified guest operating systems to run in virtual machines, making statement B correct. The hypervisor presents a complete hardware abstraction to the guest OS.

Historically and conceptually, full virtualization relies on CPU emulation or hardware-assisted virtualization, making statement C correct. Even with hardware extensions, some degree of emulation is involved.

Full virtualization also requires additional system resources and processing time to emulate hardware and manage isolation, making statement E correct.

Statement A is incorrect because paravirtualization often offers better performance. Statement D is incorrect because emulated I/O devices generally perform worse than paravirtualized drivers.

Therefore, the correct answers are B, C, and E.

### NEW QUESTION # 94

.....

Our 305-300 certification has great effect in this field and may affect your career even future. 305-300 real questions files are professional and high passing rate so that users can pass exam at the first attempt. High quality and pass rate make us famous and growing faster and faster. Many candidates compliment that 305-300 Study Guide materials are best assistant and useful for qualification exams, and only by practicing our 305-300 exam braindumps several times before exam, they can pass 305-300 exam in short time easily.
