Free CDPSE Dumps - New CDPSE Test Pattern

It would take a lot of serious effort to pass the ISACA CDPSE exam, therefore it wouldn't be simple. So, you have to prepare yourself for this. But since we are here to assist you, you need not worry about how you will study for the Certified Data Privacy Solutions Engineer (CDPSE) exam dumps. You can get help from us on how to get ready for the ISACA CDPSE Exam Questions. We will accomplish this objective by giving you access to some excellent CDPSE practice test material that will enable you to get ready for the Certified Data Privacy Solutions Engineer (CDPSE) exam dumps.

ISACA Certified Data Privacy Solutions Engineer Sample Questions (Q137-Q142):

NEW QUESTION # 137
Which of the following is the BEST way to reduce the risk of compromise when transferring personal information using email?

- A. Centrally managed encryption

- B. End user-managed encryption
- C. Private cloud storage space
- D. Password-protected .zip files

Answer: A

Explanation:
Encryption is a security practice that transforms data into an unreadable format using a secret key or algorithm. Encryption protects the confidentiality and integrity of data, especially when they are transferred using email or other communication channels. Encryption ensures that only authorized parties can access and use the data, while unauthorized parties cannot decipher or modify the data without the key or algorithm. Encryption also helps to comply with data protection laws and regulations, such as the General Data Protection Regulation (GDPR) or the California Consumer Privacy Act (CCPA), which require data controllers and processors to implement appropriate technical and organizational measures to safeguard personal data.
Centrally managed encryption is a type of encryption that is implemented and controlled by a central authority or system, such as an organization or a service provider. Centrally managed encryption has the following advantages over end user-managed encryption, private cloud storage space, or password-protected .zip files, for reducing the risk of compromise when transferring personal information using email:
It can enforce consistent and standardized encryption policies and procedures across the organization or the service, such as the encryption standards, algorithms, keys, modes, and formats.
It can automate the encryption and decryption processes for the users, without requiring them to perform any manual actions or install any software or plug-ins on their devices.
It can monitor and audit the encryption activities and incidents, and provide visibility and accountability for the data protection and compliance status.
It can reduce the human errors or negligence that may compromise the encryption security, such as losing or sharing the keys, forgetting or reusing the passwords, or sending the data to the wrong recipients.
Reference:
Encryption in the Hands of End Users - ISACA, section 2: "A key goal of encryption is to protect the file even when direct access is possible or the transfer is intercepted." The Complexity Conundrum: Simplifying Data Security - ISACA, section 3: "Centrally managed encryption solutions can help enterprises overcome these challenges by providing a unified platform for encrypting data across different environments and applications." Email Encryption: What You Need to Know - Lifewire, section 1: "Email encryption is a way of protecting your email messages from being read by anyone other than the intended recipients."

NEW QUESTION # 138

When using anonymization techniques to prevent unauthorized access to personal data, which of the following is the MOST important consideration to ensure the data is adequately protected?

- A. The data must be stored in locations protected by data loss prevention (DLP) technology.
- B. The data must be protected by multi-factor authentication.
- C. The key must be kept separate and distinct from the data it protects.
- D. The key must be a combination of alpha and numeric characters.

Answer: C

Explanation:
Explanation
Anonymization is a technique that removes or modifies personal data in such a way that it can no longer be attributed to a specific data subject. Anonymization can be achieved by various methods, such as encryption, pseudonymization, aggregation, generalization, etc. When using anonymization techniques to prevent unauthorized access to personal data, the most important consideration to ensure the data is adequately protected is that the key must be kept separate and distinct from the data it protects. The key is a piece of information that is used to reverse the anonymization process and restore the original personal data. The key must be stored and managed in a secure location that is different from where the anonymized data is stored and processed. This way, even if the anonymized data is compromised, the key cannot be accessed or used to re-identify the data subjects. References: : CDPSE Review Manual (Digital Version), page 29

NEW QUESTION # 139

Which of the following features should be incorporated into an organization's technology stack to meet privacy requirements related to the rights of data subjects to control their personal data?

- A. Establishing a data privacy customer service bot for individuals

- B. Allowing individuals to have direct access to their data
- C. Providing system engineers the ability to search and retrieve data
- D. Allowing system administrators to manage data access

Answer: B

Explanation:
Any organization collecting information about EU residents is required to operate with transparency in collecting and using their personal information. Chapter III of the GDPR defines eight data subject rights that have become foundational for other privacy regulations around the world:
Right to access personal data. Data subjects can access the data collected on them.

NEW QUESTION # 140
Which of the following is the best way to reduce the risk of compromised credentials when an organization allows employees to have remote access?

- A. Implement multi-factor authentication.
- B. Deploy single sign-on with complex password requirements.
- C. Enable whole disk encryption on remote devices.
- D. Purchase an endpoint detection and response (EDR) tool.

Answer: A

Explanation:
Explanation
Implementing multi-factor authentication is the best way to reduce the risk of compromised credentials when an organization allows employees to have remote access, as it adds an extra layer of security and verification to the authentication process. Multi-factor authentication requires the user to provide two or more pieces of evidence to prove their identity, such as something they know (e.g., password, PIN), something they have (e.g., token, smart card), or something they are (e.g., fingerprint, face scan)135. NEW QUESTION # 141
Which of the following BEST ensures data confidentiality across databases?

- A. Data anonymization
- B. Logical data model
- C. Data normalization
- D. Data catalog vocabulary

Answer: A

NEW QUESTION # 142
......

The web-based ISACA CDPSE Practice Exam is compatible with all operating systems, including Mac, Linux, iOS, Android, and Windows. It is a browser-based Certified Data Privacy Solutions Engineer (CDPSE) practice exam that works on all major browsers, including Chrome, Firefox, Safari, Internet Explorer, and Opera.
