- B. Set only for Constant values
- **C. Set as Constants or Expressions based on other field values**
- D. Default values must be manually entered by the user

**Answer: C**

Explanation:

SAP Ariba allows you to define default values for fields either as static Constants or as dynamic Expressions based on other field values. Expressions use the Ariba expression language, supporting logical comparisons and operators to calculate defaults dynamically during data entry. This enables tailored defaulting logic that adapts to form context or user input. Default values are applied automatically by the system; users do not have to enter them manually unless they override the defaults. This flexibility improves data accuracy and user experience.

#### NEW QUESTION # 60

Which of the following considerations are important when creating custom fields? (Select 2 correct answers)

- A. When a field has been created and published, that field type has been consumed from the number of available fields on the class
- B. There's a limit to the number of fields, by data type, that can be added to a class
- C. Published field changes can be reverted via Un-publish to free up memory
- D. The data type of a field can be dynamically changed, depending on data type availability

**Answer: A,B**

Explanation:

SAP Ariba allocates a finite number of field "slots" per data type for each class. When a custom field is created and published, it consumes one of these slots. Therefore, there are limits to how many fields of each type you can create per class. The data type cannot be changed after creation, and un-publishing does not reclaim the allocated slot; you must delete the field to free resources. Planning field usage carefully avoids hitting these system limits.
