### UiPath UiPath-ABAv1 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Libraries and Templates: Creating, publishing, and consuming process libraries, as well as working with templates, are discussed here.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>UI Automation: UI Automation principles, including modern and classic design experiences, are discussed alongside utilizing modern recorder and input</li><li>output activities.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Working with Files and Folders: Creating, managing, and iterating through local files and folders are covered here.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>Variables and Arguments: This topic explores data types and how they're utilized, along with creating, managing, and using variables and arguments. It also addresses the differences between variables, arguments, global constants, and global variables.</li></ul>
Topic 5	<ul style="list-style-type: none"><li>Workflow Analyzer: This topic covers the use of Workflow Analysis, along with configuring Workflow Analyzer settings.</li></ul>
Topic 6	<ul style="list-style-type: none"><li>Studio Interface: Here, the topic covers installing Studio Community Edition, connecting to Orchestrator, and navigating the Studio interface. It also includes explanations of different Studio profiles, management of packages, use of activity project settings, and the use of options in the Studio Backstage view.</li></ul>
Topic 7	<ul style="list-style-type: none"><li>Object Repository: Creation, publication, and consumption of UI libraries with static and dynamic descriptors are covered in this section.</li></ul>
Topic 8	<ul style="list-style-type: none"><li>Logging: This topic addresses interpreting robot execution logs and implementing logging best practices during development for effective debugging and analysis.</li></ul>

Topic 9	<ul style="list-style-type: none"> <li>Control Flow: Control Flow activities, workflow types, and Flowchart layouts are discussed here, along with the usage of IF, Flow Decision, Switch activities, While, Do While, and For Each.</li> </ul>
Topic 10	<ul style="list-style-type: none"> <li>Platform Knowledge: It delves into UiPath products and their uses, including Studio types, Robot types, Orchestrator, and Integration Service. Additionally, it discusses the value of components within the UiPath Ecosystem.</li> </ul>

## Certification UiPath-ABAv1 Exam Cost, New UiPath-ABAv1 Test Materials

The UiPath Certified Professional Automation Business Analyst Professional v1.0 (UiPath-ABAv1) practice test is being offered in three different formats. These UiPath UiPath-ABAv1 exam questions formats are PDF dumps files, web-based practice test software, and desktop practice test software. All these UiPath UiPath-ABAv1 Exam Dumps formats contain real, updated, and error-free UiPath Certified Professional Automation Business Analyst Professional v1.0 (UiPath-ABAv1) exam questions that prepare you for the final UiPath-ABAv1 exam.

## UiPath Certified Professional Automation Business Analyst Professional v1.0 Sample Questions (Q41-Q46):

### NEW QUESTION # 41

In the PDD, what should a complete Out of Scope section contain?

- A. List of out of scope process steps and inputs
- B. List of out of scope inputs & outputs
- C. List out of scope process steps, reason and impact on the to Be process**
- D. List of out of scope process steps

**Answer: C**

Explanation:

The Out of Scope section of a PDD (Process Definition Document) should include detailed information on processes or sub-processes that are not included in the scope of the RPA (Robotic Process Automation) project. This should not only list the out-of-scope steps but also provide the reasons why they are not included and the impact this exclusion has on the to-be process. Understanding and documenting what is out of scope is crucial for setting clear boundaries and expectations for the project, ensuring that all stakeholders have a common understanding of what the automation will and will not cover. ### NEW QUESTION # 42

What event can affect selector reliability in automations?

- A. An update to the UiPath Robot running the automation
- B. Target applications changing their position on the screen
- C. Automation target applications being updated**
- D. An increase in the volume of transactions

**Answer: C**

Explanation:

An event that can affect selector reliability in automations is the target applications being updated. Updates to applications can alter the UI elements and structures that selectors depend on, leading to failures in identifying these elements during automation execution. ### NEW QUESTION # 43

What does Test data represent?

- A. Input and output of the UAT phase
- B. Input and output of the process
- **C. Input for the process**
- D. Output of the process

**Answer: C**

Explanation:

Test data in the context of UiPath represents the data that is used to feed into a process to test its functionality.

It is the input that is provided to the process to verify that the process works correctly and produces the expected output. Test data can be generated for an existing workflow in your Studio project, whereby data is generated based on arguments, i.e., to test multiple process instances in various If decision trees<sup>1</sup>. This data is crucial during the testing phase to ensure that the process handles the input correctly and that the automation behaves as expected.

References: The explanation is based on the UiPath Documentation Portal's information on test data generation and usage within the UiPath ecosystem<sup>2314</sup>.

**NEW QUESTION # 44**

Is it possible to use a third-party ML model with AI Center?

- A. Yes, but only if AI Center is deployed on-premise.
- **B. Yes, by creating a custom package that uses the third-party model.**
- C. Yes, but it cannot use a GPU in that case.
- D. No, you can only use the ML models available within AI Center.

**Answer: B**

Explanation:

UiPath AI Center provides flexibility for integrating third-party ML models into its framework. Here's how:

Third-Party Model Integration: Users can create a custom package for AI Center that incorporates a third-party model. This involves exporting the model in a compatible format (e.g., ONNX or TensorFlow SavedModel) and wrapping it into a package deployable in AI Center.

Scenarios for Usage: This is especially useful when businesses already have proprietary models developed externally or sourced from other vendors. These can be fine-tuned and deployed alongside UiPath's RPA workflows.

Infrastructure Consideration: While deploying on-premises provides better control over model usage and performance, AI Center supports GPU acceleration and third-party model integration across different deployment modes, ensuring scalability and processing efficiency.

This approach allows businesses to maintain the versatility of their ML pipelines and integrate advanced analytics with minimal disruption to their existing automation setup.

**NEW QUESTION # 45**

How can UiPath Communications Mining help organizations improve their customer service?

- **A. By analyzing customer interactions and providing insights and recommendations**
- B. By automating customer service tasks and allowing agents to handle more requests
- C. By providing tools for managing customer relationships and interactions
- D. By securely storing customer data and making it accessible to customer service agents

**Answer: A**

Explanation:

UiPath Communications Mining analyzes unstructured customer conversations (e.g., emails, tickets, feedback) and extracts actionable insights. These insights help organizations:

- \* Understand customer sentiment and concerns
- \* Identify trends and topics for improvement
- \* Prioritize responses and streamline workflows

"UiPath Communications Mining enables businesses to analyze short-form asynchronous communications, identify patterns and trends, and provide actionable insights to improve customer service." References:
