

1Z1-771 Online Tests - Reliable 1Z1-771 Test Labs

Our company is trying to satisfy every customer's demand. Of course, we also attach great importance on the quality of our 1Z1-771 real exam. Every product will undergo a strict inspection process. In addition, there will have random check among different kinds of 1Z1-771 Study Materials. The quality of our 1Z1-771 practice dumps deserves your trust.our products have built good reputation in the market. We sincerely hope that you can try our 1Z1-771 preparation guide.

ActualTorrent is unlike other similar platforms, our 1Z1-771 real test can be downloaded for free trial before purchase, which allows you to understand our sample questions and software usage. It will also enable you to make a decision based on your own needs and will not regret. And we have organized a group of professionals to revise our 1Z1-771 Preparation materials. The simple and easy-to-understand language of 1Z1-771 guide torrent frees any learner from studying difficulties, whether for students or office workers. And the pass rate of our 1Z1-771 exam questions is as high as 99% to 100%.

Reliable 1Z1-771 Test Labs - Reliable 1Z1-771 Study Guide

One such trustworthy point about exam preparation material is that it first gains your trust, and then asks you to purchase it. Everyone can get help from ActualTorrent's free demo of Oracle 1Z1-771 exam questions. Our Oracle APEX Cloud Developer Professional exam questions never remain outdated! Take a look at our Free Oracle 1Z1-771 Exam Questions And Answers to check how perfect they are for your exam preparation. Once you buy it, you will be able to get free updates for Oracle APEX Cloud Developer Professional exam questions for up to 1 year.

Oracle 1Z1-771 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Managing Application Data: This section evaluates the expertise of Data Engineers in handling application data. It covers using collections, managing REST-enabled SQL references, integrating REST Data Sources, and synchronizing data across different environments.
Topic 2	<ul style="list-style-type: none">Managing Workflows and Tasks: This section evaluates the proficiency of Process Automation Specialists in workflow management. It covers customizing workflows, using approval processes, and handling unified task lists to streamline business processes within applications.
Topic 3	<ul style="list-style-type: none">Creating an APEX Application: This section tests the abilities of Application Developers in building APEX applications. It focuses on creating applications from existing tables and external files, providing a fundamental understanding of the App Builder tool and its role in application development.
Topic 4	<ul style="list-style-type: none">Adding Computations, Processes, Validations, and Branches: This section measures the knowledge of Backend Developers in implementing application logic. It focuses on configuring computations, processes, validations, and page branches to automate workflows and ensure data integrity.
Topic 5	<ul style="list-style-type: none">Using Themes and Theme Styles: This section tests the abilities of UI Designers in applying visual themes to applications. It involves selecting and customizing themes, using Theme Roller for design adjustments, and creating template components for consistent branding.

Topic 6	<ul style="list-style-type: none"> Developing Reports: This section assesses the skills of Report Developers in creating interactive reports and dashboards. It involves customizing reports, working with faceted search pages, integrating smart filters, and designing visually appealing data presentations using Oracle APEX.
Topic 7	<ul style="list-style-type: none"> Creating and Using Dynamic Actions and Plug-ins: This section tests the expertise of Developers in implementing dynamic actions. It covers configuring event-driven behaviors and integrating plug-ins to create responsive and interactive application features.
Topic 8	<ul style="list-style-type: none"> Migrating Application Development Between Environments: This section measures the abilities of DevOps Engineers in managing application deployments. It includes exporting and importing application artifacts, performing remote deployments, and maintaining working copies to ensure smooth transitions between development environments.
Topic 9	<ul style="list-style-type: none"> Using SQL Workshop: This section evaluates the expertise of Database Developers in managing database objects using SQL Workshop. It includes creating and modifying database structures, running SQL commands and scripts, and efficiently loading and unloading data through the Data Workshop utility to simplify database interactions.
Topic 10	<ul style="list-style-type: none"> Extending Application Capabilities: This section measures the skills of APEX Developers in enhancing application functionality. It includes sending automated emails, implementing plug-ins, and utilizing automation features to improve efficiency and extend capabilities.
Topic 11	<ul style="list-style-type: none"> Getting Started with Oracle APEX on the Oracle Autonomous Database: This section of the exam measures the skills of APEX Developers in understanding Oracle APEX and its core components. It covers the creation and management of workspaces, providing an overview of how APEX integrates with the Oracle Autonomous Database to streamline application development.
Topic 12	<ul style="list-style-type: none"> Leveraging Generative AI in Oracle APEX: This section tests the knowledge of AI Developers in integrating AI-powered features within APEX applications. It involves using APEX Assistant for code generation, creating AI-driven data models, and implementing AI-powered text generation using dynamic actions.
Topic 13	<ul style="list-style-type: none"> Implementing Security in Your Application: This section evaluates the knowledge of Security Specialists in securing APEX applications. It covers authentication schemes, authorization controls, and session state protection to ensure application security and user access management.
Topic 14	<ul style="list-style-type: none"> Implementing Navigation in Your Application: This section assesses the skills of UX Designers in designing smooth application navigation. It includes configuring shared components, setting up search functionalities, and enhancing user experience with intuitive navigation structures.
Topic 15	<ul style="list-style-type: none"> Creating and Using Forms: This section evaluates the proficiency of Form Developers in designing user-friendly forms. It covers creating interactive grids, developing simple forms linked to reports, and implementing master-detail forms for effective data management.

Oracle APEX Cloud Developer Professional Sample Questions (Q18-Q23):

NEW QUESTION # 18

What happens when you regenerate credentials for Push Notifications in Oracle APEX?

- A. Existing Push Subscriptions for the application will be invalidated.
- B. A new notification server must be created.
- C. Push Notifications will be disabled for the application.

Answer: A

Explanation:

Regenerating Push Notification credentials updates the VAPID keys (public/private pair) in the PWA settings:

A . Existing Push Subscriptions invalidated: Subscriptions (in APEX_APPL_PUSH_SUBSCRIPTIONS) are tied to the old keys. New keys break this link, requiring users to re-subscribe (e.g., via browser prompts), as the push service (e.g., Firebase) can't

authenticate old subscriptions.

B . New notification server: False; the server configuration remains; only credentials change.

C . Disabled for the app: False; notifications remain enabled but won't work for old subscriptions until re-established.

Technical Insight: Regeneration updates APEX_PWA_VAPID_PUBLIC_KEY and APEX_PWA_VAPID_PRIVATE_KEY, triggering a subscription refresh cycle.

Use Case: Security breach requires key rotation.

Pitfall: Users must re-opt-in, potentially losing some subscribers.

NEW QUESTION # 19

Which two tasks can be performed by the APEX Assistant when you create an application using the "Create App using Generative AI" option?

- A. Create a Generative AI service.
- B. Add a Dashboard page.
- C. Create the application blueprint.
- D. Update the App icon with a custom image.

Answer: B,C

Explanation:

The "Create App using Generative AI" feature in APEX Assistant leverages natural language processing to automate application creation. When invoked:

Create the application blueprint: APEX Assistant generates a foundational structure (blueprint) for the application, including pages, regions, and navigation, based on the user's natural language input (e.g., "Create an app to manage employees"). This blueprint serves as the starting point, which developers can refine.

Add a Dashboard page: The Assistant can interpret requests for specific page types, such as dashboards, and include them in the generated app. Dashboards typically feature charts, summaries, or key metrics, and this is a common task supported by the AI-driven creation process.

Create a Generative AI service: This is not a task performed during app creation; instead, it's a prerequisite configuration step done separately in the Instance Administration settings.

Update the App icon: While app icons can be customized manually post-creation, this is not an automated task performed by APEX Assistant during the generative process.

This feature streamlines development by interpreting intent and building functional components, saving significant time compared to manual creation.

NEW QUESTION # 20

Which two statements are true about creating and using dynamic actions?

- A. After you create a dynamic action, you cannot add more true actions.
- B. You can execute JavaScript code by creating a dynamic action.
- C. If no client-side condition is defined, true actions will not fire.
- D. If a client-side condition is defined, the true action will fire when the condition is met.

Answer: B,D

Explanation:

Dynamic Actions in APEX enable responsive behavior:

If a client-side condition is defined, the true action will fire when the condition is met: A condition (e.g., `this.browserEvent === 'click'`) ensures the true action (e.g., Show, Hide) executes only when true, enhancing precision in event handling.

You can execute JavaScript code by creating a dynamic action: The "Execute JavaScript Code" action type allows custom scripts (e.g., `alert('Clicked!');`), extending functionality beyond declarative options.

Cannot add more true actions: False; multiple true actions can be added post-creation.

No condition, true actions won't fire: False; without a condition, true actions fire unconditionally on the event.

Dynamic Actions are a cornerstone of interactive UIs in APEX.

NEW QUESTION # 21

Which two Plugin types can be created in Oracle APEX?

- A. Validation
- B. Process
- C. Email Template
- D. Region

Answer: B,D

Explanation:

Plugins extend APEX's functionality beyond built-in components:

C . Process: A Process plugin executes custom server-side logic (e.g., PL/SQL) during page processing or AJAX calls. Example: A plugin to sync data with an external API after form submission. It's defined with execution points and parameters.

D . Region: A Region plugin creates custom UI areas (e.g., a dynamic chart or carousel). Example: A plugin rendering a custom dashboard. It supports attributes, templates, and refresh events.

A . Validation: While validations are customizable, they're not a plugin type; they're declarative or PL/SQL-based within APEX.

B . Email Template: Email formatting is handled via APEX_MAIL or templates in Shared Components, not as plugins.

Technical Insight: Plugins are created in Shared Components > Plug-ins, requiring PL/SQL for logic, JavaScript/CSS for UI, and a render function. For instance, a Region plugin might use `apex_plugin.t_region` to define its output.

Use Case: A Process plugin to log audit trails or a Region plugin for a unique data visualization.

Pitfall: Developing plugins requires advanced skills; test thoroughly to avoid runtime errors.

NEW QUESTION # 22

An APEX e-commerce application is being used by 50 users. You have a promotional offer, and you need to send a push notification to all the subscribed users on their devices. Which step must be performed in Oracle APEX to achieve this?

- A. Enable push notifications at the application level and let APEX handle the subscription and delivery process automatically.
- B. Create a PL/SQL block to fetch all the subscribed users and send push notifications by using `APEX_APPL_PUSH_SUBSCRIPTIONS & APEX_PWA.SEND`.
- C. Create a Dynamic Action of Send Push Notification type to send push notifications to all the subscribed users.
- D. Create a REST Data Source to send push notifications to all the subscribed users.

Answer: B

Explanation:

To send push notifications to all subscribed users, you must:

Enable push notifications at the application level (a prerequisite).

Use a PL/SQL block with `APEX_APPL_PUSH_SUBSCRIPTIONS` to fetch subscribers and `APEX_PWA.SEND` to send the notifications.

Option A is incorrect as there's no "Send Push Notification" Dynamic Action type. Option B is incomplete as enabling alone doesn't send notifications. Option C is unrelated to push notifications.

NEW QUESTION # 23

.....

In order to serve you better, we have a complete system for you if you choose us. We have free demo for 1Z1-771 training materials for you to have a try. If you have decided to buy 1Z1-771 exam dumps of us, just add them to your cart, and pay for it, our system will send the downloading link and password to you within ten minutes, and if you don't receive, just contact us, we will solve this problem for you as quickly as possible. For 1Z1-771 Training Materials, we also have after-service, if you have questions about the exam dumps, you can contact us by email.
