Obtaining a CISM certification demonstrates a commitment to information security and provides individuals with a competitive edge in the job market.

ISACA Certified Information Security Manager Sample Questions (Q760-Q765):

NEW QUESTION # 760

The MOST effective way to ensure network users are aware of their responsibilities to comply with an organization's security requirements is:

- A. periodic security-related e-mail messages.
- **B. messages displayed at every logon.**
- C. an Intranet web site for information security.
- D. circulating the information security policy.

Answer: B

Explanation:

Explanation

Logon banners would appear every time the user logs on, and the user would be required to read and agree to the same before using the resources. Also, as the message is conveyed in writing and appears consistently, it can be easily enforceable in any organization. Security-related e-mail messages are frequently considered as

"Spam" by network users and do not, by themselves, ensure that the user agrees to comply with security requirements. The existence of an Intranet web site does not force users to access it and read the information.

Circulating the information security policy alone does not confirm that an individual user has read, understood and agreed to comply with its requirements unless it is associated with formal acknowledgment, such as a user's signature of acceptance.

NEW QUESTION # 761

When an organization decides to accept a risk, it should mean the cost to mitigate:

- A. is higher than the cost to transfer risk.
- B. is less than the residual risk.
- C. exceeds budget allocation.
- **D. is greater than the residual risk.**

Answer: D

NEW QUESTION # 762

When considering the value of assets, which of the following would give the information security manager the MOST objective basis for measurement of value delivery in information security governance?

- **A. Cost of achieving control objectives**
- B. Number of controls
- C. Effectiveness of controls
- D. Test results of controls

Answer: A

Explanation:

Explanation/Reference:

Explanation:

Comparison of cost of achievement of control objectives and corresponding value of assets sought to be protected would provide a sound basis for the information security manager to measure value delivery.

Number of controls has no correlation with the value of assets unless the effectiveness of the controls and their cost are also evaluated. Effectiveness of controls has no correlation with the value of assets unless their costs are also evaluated. Test results of controls have no correlation with the value of assets unless the effectiveness of the controls and their cost are also evaluated.

NEW QUESTION # 763

Information security should be:

- A. focused on eliminating all risks.
- B. driven by regulatory requirements.
- C. defined by the board of directors.
- **D. a balance between technical and business requirements.**

Answer: D

Explanation:
