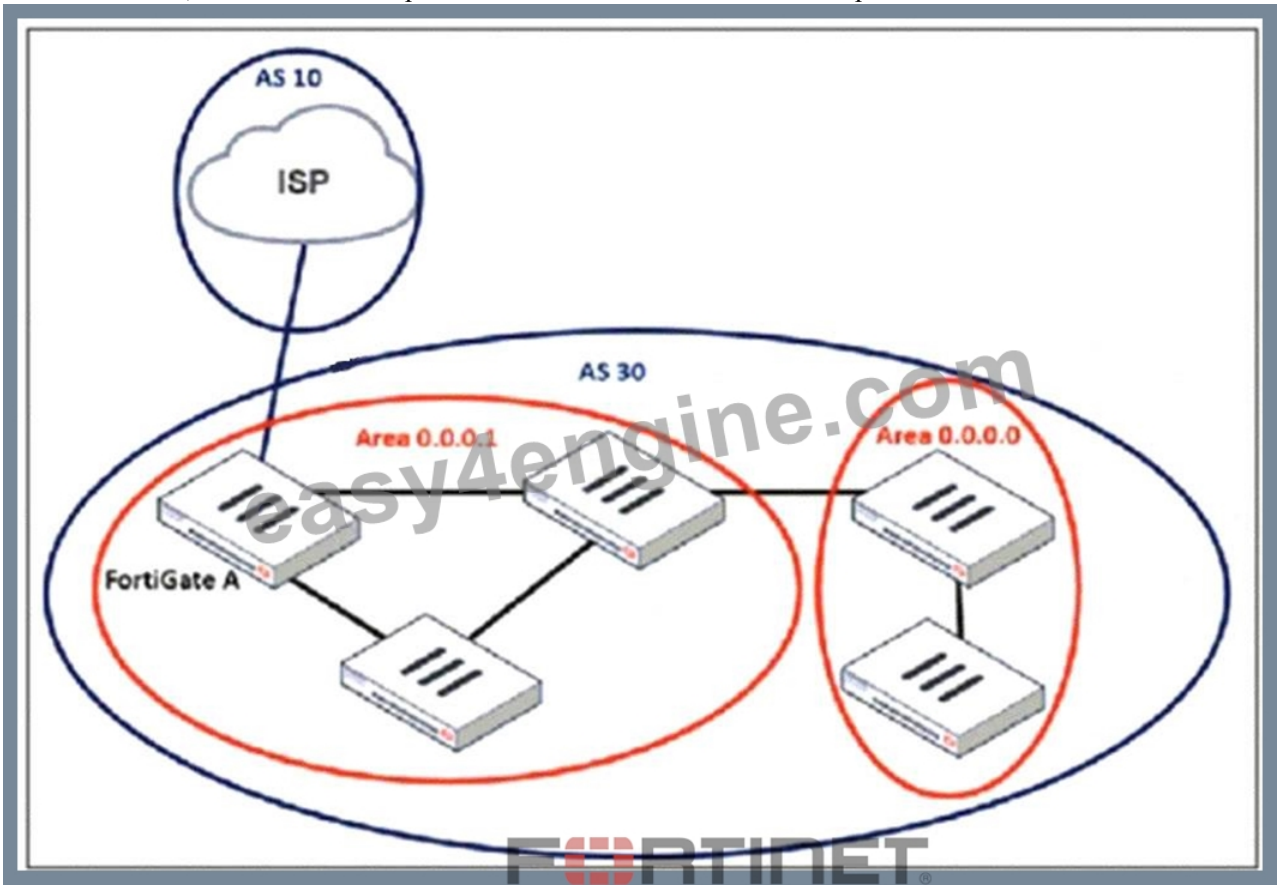
Fortinet FCSS - Enterprise Firewall 7.4 Administrator Sample Questions (Q68-Q73):

NEW QUESTION # 68
Refer to the exhibit, which shows an enterprise network connected to an internet service provider.



An administrator must configure a loopback as a BGP source to connect to the ISP.
Which two commands are required to establish the connection? (Choose two.)

- A. ebgp-enforce-multihop
- B. ibgp-enforce-multihop
- C. update-source
- D. recursive-next-hop

Answer: A,C

Explanation:
When configuring aloopback interface as the BGP sourceforconnecting to an ISP, two important settings must be applied:
1.Enable EBGP Multihop (ebgp-enforce-multihop)
BGP normally expects directly connected neighbors, but since the ISP and FortiGate A are usingloopback interfaces,packets will not be sent directly between their physical interfaces.
Theebgp-enforce-multihopcommandallows BGP to form an eBGP peering over multiple hops.
2.Set the Update Source (update-source)
Since FortiGate is using aloopback interface as the source, theupdate-sourcecommand ensures thatBGP updates originate from the loopback interfacerather than a physical interface.
This is essential becauseBGP peers must match the source IP with the configured neighbor address.
