PAM-DEF exam also tests the candidate's ability to manage privileged access across various platforms and applications.

CyberArk Defender - PAM Sample Questions (Q15-Q20):

NEW QUESTION # 15

If a password is changed manually on a server, bypassing the CPM, how would you configure the account so that the CPM could resume management automatically?

- A. Run the correct auto detection process to rediscover the password
- B. Configure the Provider to change the password to match the Vault's Password
- C. Associate a logon account and configure the platform to reconcile automatically
- **D. Associate a reconcile account and configure the platform to reconcile automatically**

Answer: D

Explanation:

Explanation

A reconcile account is a privileged account that has the permission to reset the password of another account on the target system. By associating a reconcile account with the account that has been changed manually, the CPM can use the reconcile account to restore the password of the account to the value that is stored in the Vault, in case it is changed or out of sync. This process is called password reconciliation and it ensures that the passwords are synchronized and available for use. To configure the account so that the CPM can resume management automatically, the platform that the account belongs to must have the following parameters set1:

- * RCAutomaticReconcileWhenUnsynced: This parameter determines whether passwords will be reconciled automatically after the CPM detects a password on a remote machine that is not synchronized with its corresponding password in the Vault. The acceptable values are Yes or No.

- * RCReconcileReasons: This parameter determines the codes that represent the CPM plugin errors that will launch a reconciliation process. The acceptable values are plug-in return codes separated by a comma.

- * RCFromHour, RCToHour: These parameters determine the time frame in hours during which the CPM can reconcile passwords, either manually or automatically. The acceptable values are 0-23 or -1 for none.

- * RCExecutionDays: This parameter determines the days of the week when the CPM will reconcile passwords. The acceptable values are days of the week, separated by commas.

NEW QUESTION # 16

To use PSM connections while in the PVWA, what are the minimum safe permissions a user or group will need?

- A. Use Accounts

- **B. List Accounts, Use Accounts, Retrieve Accounts**
- C. List Accounts, Use Accounts
- D. List Accounts, Use Accounts, Retrieve Accounts, Access Safe without confirmation

Answer: B

Explanation:

Explanation

To use PSM connections within the PVWA, a user or group needs to have permissions that allow them to list and use accounts, as well as retrieve account details. These permissions ensure that the user can view the accounts within a safe, initiate sessions using those accounts, and retrieve the necessary credentials for authentication during the session initiation process¹.

References:

* CyberArk's official documentation on Safe Settings and permissions required for each safe in CyberArk's Enterprise Password Vault (EPV) components provides detailed information on the default safe configuration and permissions¹.

* For more information on best practices for safe and safe member design, including the minimum permissions required for PSM connections, refer to CyberArk's best practices articles and study guides

NEW QUESTION # 17

Users who have the 'Access Safe without confirmation' safe permission on a safe where accounts are configured for Dual control, still need to request approval to use the account.

- **A. TRUE**
- B. FALSE

Answer: A

NEW QUESTION # 18

The Active Directory User configured for Windows Discovery needs which permission(s) or membership?

- **A. Read and Write Permissions**
- B. Member of LDAP Admin Group
- C. Read Only Permissions
- D. Member of Domain Admin Group

Answer: A

NEW QUESTION # 19

If the AccountUploader Utility is used to create accounts with SSH keys, which parameter do you use to set the full or relative path of the SSH private key file that will be attached to the account?

- A. Address
- B. KeyPath
- C. ObjectName
- **D. KeyFile**

Answer: D
