Our PDF files can be easily downloaded and accessed on various devices, including PCs, laptops, Macs, tablets, and smartphones. With the SAP Certified Associate - Process Data Analyst - SAP Signavio (C_SIGDA_2403) PDF questions, you have the flexibility to study anytime and anywhere, eliminating the need for additional classes. Our comprehensive PDF guide contains all the essential information required to pass the C_SIGDA_2403 in one shot.

SAP Certified Associate - Process Data Analyst - SAP Signavio Sample Questions (Q30-Q35):

NEW QUESTION # 30
What is a core capability of the transaction code analysis?

- A. It can check the number of transaction codes used on average for each process step and by company code
- B. It can show the various ways processes are executed in reality across the entire organization
- C. It can check the number of transaction codes used on average for one end-to-end process
- D. It can show the average ways processes are executed in a particular company code

Answer: A

Explanation:
Transaction code analysis in SAP Signavio Process Intelligence examines the usage of transaction codes in SAP systems to understand process execution. The documentation details:
* Exact Extract:"Transaction code analysis provides insights into the number of transaction codes used on average for each process step, segmented by company code, to identify variations in process execution across organizational units." (SAP Signavio Process Intelligence User Guide, section on
"Transaction Code Analysis").
* Explanation:
* Option B (It can check the number of transaction codes used on average for each process step and by company code):This is correct as transaction code analysis breaks down the usage of SAP transaction codes (e.g., VA01 for sales order creation) per process step and company code, highlighting differences in how processes are executed.
* Option A (It can check the number of transaction codes used on average for one end-to-end process)is incorrect as the analysis focuses on individual steps, not the entire process.
* Option C (It can show the various ways processes are executed in reality across the entire organization)is incorrect because this is a function of Process Discovery or Variant Explorer, not transaction code analysis.
* Option D (It can show the average ways processes are executed in a particular company code)is incorrect as it describes process variants, not transaction code usage.

NEW QUESTION # 31
Which process-related areas are the focus for Business Process Management? Note: There are 3 correct answe rs to this questio n.

- A. Process Governance
- B. Process Discovery
- C. Process Transparency
- D. Process Implementation
- E. Process Improvement

Answer: C,D,E

NEW QUESTION # 32

How can a user collaborate in the Collaboration Hub?

- A. By taking a screenshot of the process
- B. By creating a support ticket
- C. By commenting on a diagram
- D. By exporting the processes to share

Answer: C

Explanation:
The SAP Signavio Process Collaboration Hub facilitates collaboration among stakeholders by enabling direct interaction with process content. The SAP Signavio Process Collaboration Hub Documentation specifies:
* Exact Extract:"Users can collaborate in the SAP Signavio Process Collaboration Hub by commenting on diagrams, providing feedback, suggesting improvements, or asking questions directly on process models." (SAP Signavio Process Collaboration Hub User Guide, section on "Collaboration Features").
* Explanation:
* Option D (By commenting on a diagram):This is correct as the Collaboration Hub allows users to add comments to specific elements of a process diagram, fostering discussion and feedback among stakeholders, such as suggesting changes to a process step.
* Option A (By taking a screenshot of the process)is incorrect as screenshots are not a collaboration feature; they are a manual action outside the Hub's functionality.
* Option B (By creating a support ticket)is incorrect because support tickets are for technical issues, not process collaboration.
* Option C (By exporting the processes to share)is incorrect as exporting is a data-sharing method, not a direct collaboration feature within the Hub.
Reference:SAP Signavio Process Collaboration Hub User Guide, section on "Collaboration Features"; SAP Certified Associate - Process Data Analyst Study Guide, Chapter 3: Collaboration Tools.

NEW QUESTION # 33
What is the first step in starting an analysis in SAP Signavio Process Intelligence?

- A. Upload the event log
- B. Upload the attribute log
- C. Create a new investigation
- D. Create a new process

Answer: A

Explanation:
The first step in starting an analysis in SAP Signavio Process Intelligence is:
* Option D (Upload the event log): The event log is a critical data source for process mining and analysis in SAP Signavio Process Intelligence. It contains detailed records of process activities, including start and end times, performers, and other event attributes. Uploading the event log is the initial step to analyze the actual performance of business processes, enabling organizations to discover, monitor, and enhance their processes based on real data.

NEW QUESTION # 34
In the context of a workflow, what is a case?

- A. A specific action to be performed in the workflow
- B. A process template used as a workflow
- C. Different variants of the same workflow
- D. A one-time run of a workflow

Answer: D

Explanation:
In the context of a workflow, a case refers to:

* Option D (A one-time run of a workflow):Each instance where a workflow is executed is considered a case. It represents a single occurrence of the process, with its own unique data and context. This concept is fundamental in differentiating between individual executions of a workflow, allowing for the tracking and analysis of each specific instance.
