High Pass-Rate Reliable AD0-E117 Test Braindumps to Obtain Adobe Certification

With the complete collection of Adobe practice questions and answers, our website offers you the most reliable AD0-E117 vce files for your exam preparation. In the AD0-E117 actual test we have compiled real questions and answers so that you can prepare and pass exam in your first attempt. You can also check the demo of AD0-E117 Dumps PDF before you decide to buy it.

Adobe AD0-E117 (Adobe Experience Manager Architect Master) Certification Exam is designed to validate the skills and knowledge required to design, develop, and maintain complex solutions that leverage Adobe Experience Manager (AEM) technologies. Adobe Experience Manager Architect Master certification exam is intended for experienced AEM architects who have a deep understanding of AEM concepts and functionality, as well as a thorough knowledge of relevant technologies and standards.

Adobe Experience Manager Architect Master Sample Questions (Q65-Q70):

NEW QUESTION # 65

A customer with a large volume of assets and site pages needs to upgrade from AEM 6.4 with MongoMK installation to AEM 6.5 MongoMK. The architect recommends reindexing and the customer wants to keep downtime in the production environment minimal during the upgrade process.

Which two options would the architect choose? (Choose two.)

- A. Use crx2oak jar with -doc-traversal command line parameter

- B. Use oak-run jar with -doc-traversal command line parameter
- C. Run the online indexing process on the MongoDB replica
- D. Run the offline indexing process on the MongoDB replica

Answer: C,D

NEW QUESTION # 66

A client wants to change how they publish their content. Refer to the following client business requirements:

- * The client has a seasonal business that has significant content changes across their site that need to be rolled out at once based on the season change over date.
- * The content authors need to be able to work one season in advance of publish dates to ensure that all changes can be completed on time.
- * The content authors need a way to indicate that all the seasonal changes are ready. If the content changes are not completed, then the pages should not get published.
- * The content authors need the ability to modify the current live pages without rolling back changes for a future content rollout.

What approach should the Architect recommend?

- A. Use the Versioning feature when editing a page to toggle and publish changes when ready.
- B. Use Launches inside of AEM for each new season and use the production ready flag to show changes are completed.
- C. Create a Project inside of AEM for each new season and create a task for notifying that changes are completed.
- D. Use the Manage Publication with scheduling value set to the season change over date when changes are completed.

Answer: B

Explanation:

"using Launches inside of AEM for each new season can allow content authors to work on future content changes without affecting the current live pages and use the production ready flag to indicate when changes are completed".

NEW QUESTION # 67

A customer has an international presence and a strong brand image. The customer considers the exceptional quality images used for both print and on the website to be essential for its business. The customer uses AEM 6.5 managed services with a configuration of 2 dispatchers, 2 publishers, and 1 author.

The original images can weigh up to 500Mb with videos weighing even more. Renditions are generated after files are uploaded to AEM DAM by the Design team so the Authoring team can use them on the website.

The teams report issues with platform stability and slowness. Visitors report that images look pixelated on some screens and pages are very slow to load.

Which two actions should the Architect take to resolve these issues? (Choose two.)

- A. Train the design team to upload smaller assets and save the originals elsewhere
- B. Add more dispatchers and publishers to the AEM configuration
- C. Allocate more memory to ImageMagick and FFmpeg
- D. Split AEM Assets and Sites in two different stacks and use Connected Assets
- E. Optimize renditions for the different viewports used by the visitors

Answer: D,E

Explanation:

"optimizing renditions for different viewports can improve the image quality and page load speed for visitors. Splitting AEM Assets and Sites in two different stacks and using Connected Assets can reduce the load on the author server and improve platform stability".

NEW QUESTION # 68

On the release day, an AEM code deployment is done on AEM 6.5 on-prem. After the deployment was completed, the users were able to get into the Author instance with no issues. However, users are unable to access any of the sites on public domains. The users are seeing a "502 Bad Gateway" error.

What would be the potential cause of this issue?

- A. The replication agents are stuck which is causing load on the publish instances.

- B. Not all the OSGi bundles restarted after the code deploy causing the publishing instances not to be responsive.
- C. Because there was a deploy and cache was cleared, there is an increased load on the AEM Publish Instances.
- D. The new dispatcher configurations are not pointing at the correct publish instances.

Answer: D

NEW QUESTION # 69

After building an AEMaaCS website, it was found that non-cached secured static content will put too much load on the servers. How can this secured static content be cached without creating a security concern?

- A. Cache the secured content on the dispatcher using AuthChecker module
- B. Cache the secured content on the dispatcher and return "Cache-Control: private" on the HTTP header
- C. Cache the secured content on the CDN and return "Cache-Control: private" on the HTTP header
- D. Cache the secured content on the CDN using AuthChecker module

Answer: A
