Valid GH-900 Exam Tips - GH-900 Original Questions

As the authoritative provider of GH-900 learning materials, we can guarantee a high pass rate compared with peers, which is also proved by practice. Our good reputation is your motivation to choose our learning materials. We guarantee that if you under the guidance of our GH-900 learning materials step by step you will pass the exam without a doubt and get a certificate. Our learning materials are carefully compiled over many years of practical effort and are adaptable to the needs of the exam. We firmly believe that you cannot be an exception. Choosing our GH-900 Study Material actually means that you will have more opportunities to be promoted in the near future.

Microsoft GitHub Foundations Sample Questions (Q43-Q48):

NEW QUESTION # 43

What is the difference between Git and GitHub?

- A. Git and GitHub are different names for the same tool that is used for version control and collaboration.
- B. Git is a command-line tool for tracking file changes, while GitHub is a platform for collaborating on Git repositories.
- C. Git is a centralized version control system, while GitHub is a cloud-based collaboration platform.
- D. Git is a cloud-based hosting service, while GitHub is a distributed version control system.

Answer: B

Explanation:

About GitHub and Git

About GitHub

GitHub is a cloud-based platform where you can store, share, and work together with others to write code.

Storing your code in a "repository" on GitHub allows you to:

Showcase or share your work.

Track and manage changes to your code over time.

Let others review your code, and make suggestions to improve it.

Collaborate on a shared project, without worrying that your changes will impact the work of your collaborators before you're ready to integrate them.

Collaborative working, one of GitHub's fundamental features, is made possible by the open-source software, Git, upon which GitHub is built.

About Git

Git is a version control system that intelligently tracks changes in files. Git is particularly useful when you and a group of people are all making changes to the same files at the same time.

NEW QUESTION # 44

Which of the following keywords are used to link a pull request to an issue? (Choose three.)

- A. merge
- B. closed
- C. join
- D. resolves
- E. connects
- F. fix

Answer: B,D,F

Explanation:

Linking a pull request to an issue using a keyword

You can link a pull request to an issue by using a supported keyword in the pull request's description or in a commit message. The pull request must be on the default branch.

close

closes

closed [E]

fix [A]

NEW QUESTION # 45

Copilot for Individuals offers which of the following features that are not offered by Copilot for Business? (Choose two.)

- A. organization-wide policy management
- B. telemetry
- C. offers multi-line function suggestions
- D. blocks suggestions matching public code
- E. support for personal GitHub accounts
- F. VPN proxy support via self-signed certificates

Answer: D,E

Explanation:

GitHub Copilot Pro (Copilot for Individuals) is designed for individuals who want more flexibility.

This paid plan includes unlimited completions, access to premium models in Copilot Chat, access to Copilot coding agent, and a monthly allowance of premium requests. Verified students, teachers, and maintainers of popular open source projects may be eligible

for free access.

GitHub Copilot Business is for organizations on GitHub Free or GitHub Team plan, or enterprises on GitHub Enterprise Cloud. This plan includes Copilot coding agent and enables centralized management and Copilot policy control for organization members. [Not B]

[D] To block suggestions matching public code in your GitHub Copilot Pro account, go to your account settings, find the "Suggestions matching public code" option, and select "Block" from the dropdown menu, then save your changes. This setting prevents Copilot from showing you code suggestions that are identical or very similar to code found in public GitHub repositories, helping to avoid potential licensing issues by providing a way to opt-out of this feature.

NEW QUESTION # 46

How is github.dev different than Codespaces?

- A. Codespaces is available within the web browser.
- B. Extensions in the Visual Studio Code Marketplace are supported by github.dev.
- C. Codespaces provides terminal access.
- D. A free monthly quota for personal accounts is provided by github.dev.

Answer: C

NEW QUESTION # 47

When creating a repository from a template, what will the new repository contain?

- A. default branch
- B. commit history
- C. pull requests
- D. contributors

Answer: A

Explanation:

Creating a repository from a template

You can generate a new repository with the same directory structure and files as an existing repository.

You can choose to include the directory structure and files from only the default branch of the template repository or to include all branches. Branches created from a template have unrelated histories, which means you cannot create pull requests or merge between the branches.

Note:

Creating a repository from a template is similar to forking a repository, but there are important differences:

A new fork includes the entire commit history of the parent repository, while a repository created from a template starts with a single commit. [Not A] Commits to a fork don't appear in your contributions graph, while commits to a repository created from a template do appear in your contribution graph.

A fork can be a temporary way to contribute code to an existing project, while creating a repository from a template starts a new project quickly.
