Latest PDII Test Preparation - PDII Exam Sims

After so many years' development, our Salesforce Developers exam torrent is absolutely the most excellent than other competitors, the content of it is more complete, the language of it is more simply. Believing in our PDII guide tests will help you get the certificate and embrace a bright future. Time and tide wait for no man. Come to buy our test engine. TopExamCollection have most professional team to compiled and revise PDII Exam Question. In order to try our best to help you pass the exam and get a better condition of your life and your work, our team worked day and night to complete it. Moreover, only need to spend 20-30 is it enough for you to grasp whole content of our practice materials that you can pass the exam easily, this is simply unimaginable.

Salesforce Platform Developer II Sample Questions (Q142-Q147):

NEW QUESTION # 142

A developer is working with existing functionality that tracks how many times a stage has changed for an Opportunity. When the Opportunity's stage is changed, a workflow rule is fired to increase the value of a field by one. The developer wrote an after trigger to create a child record when the field changes from 4 to 5.

A user changes the stage of an Opportunity and manually sets the count field to 4. The count field updates to 5, but the child record is not created.

What is the reason this is happening?

- A. After triggers fire before workflow rules.
- B. Trigger.new does not change after a field update.
- C. After triggers are not fired after field updates.
- D. Trigger.old does not contain the updated value of the count field.

Answer: D

NEW QUESTION # 143

The test method above tests an Apex trigger that the developer knows will make a lot of queries when a lot of Account are simultaneously updated to be customer.

The test method fails at the Line 20 because of too many SOQL queries

What is the correct way to fix this?

```
Line 17:
Line 18:   update DataFactory.accounts;
Line 19:
Line 20:   List<Account> accsAfter = [SELECT Number_Of_Transfers__c FROM Account WHERE Id IN
:DataFactory.accounts];
Line 21:
Line 22:   //Utility to assert Number_Of_Transfers__c is correct based on test data
Line 23:   AssertUtil.assertNumberOfTransfers(accsAfter);
Line 24: }
```

The test method above tests an Apex trigger that the developer knows will make a lot of queries when a lot of Accounts are simultaneously updated to be customers.

The test method fails at the Line 20 because of too many SOQL queries.

What is the correct way to fix this?

- A. Add Test.startTest() before and Test.stopTest() after both Line 7 of the code and Line 20 of the code.
- B. Change the DataFactory class to create fewer Accounts so that the number of queries in the trigger is reduced.
- C. Add Test.startTest() before Line 18 of the code and add Test.stopTest() after line 18 of the code.
- D. Replace most of the Apex Trigger with Process Builder processes to reduce the number of queries in the trigger.

Answer: A

NEW QUESTION # 144

Which statement is true regarding savepoints?

- A. Static variables are not reverted during a rollback.
- B. You can roll back to any savepoint variable created in any order.
- C. Reference to savepoints can cross trigger invocations.
- D. Savepoints are not limited by DML statement governor limits.

Answer: A

Explanation:

When rolling back to a savepoint, any DML operations that occurred after that savepoint are undone, but static variables are not reverted. Therefore, when a rollback occurs, the state of all static variables at the time of the rollback remains the same as it was just before the rollback.

NEW QUESTION # 145

Universal Containers is implementing a new approval process for expense reimbursements. The process requires complex logic to determine the appropriate approver based on factors such as expense amount, employee role, and project type. The solution should allow for flexibility and future changes in the approval rules.

Which approach would be the most suitable for implementing this logic?

- A. Develop a custom Lightning component to handle the approval logic and integrate it into the expense reimbursement record page.
- B. Implement a custom formula field to calculate and determine the appropriate approver based on the given criteria.
- C. Create a custom Apex class with a method to determine the appropriate approver based on the given criteria.
- D. Use the Salesforce Approval Process feature and define multiple approval steps with entry criteria and approval assignments.

Answer: A

NEW QUESTION # 146

A developer wrote an Apex class to make several callouts to an external system. If the URLs used in these callouts will change often, which feature should the developer use to minimize changes needed to the Apex class?

- A. Connected Apps
- B. Named Credentials
- C. Remote Site Settings
- D. Session Id

Answer: B

Explanation:

When managing integrations where endpoints (URLs) or authentication details are subject to change, Named Credentials (Option A) provide the most maintainable and secure solution. A Named Credential specifies the URL of a callout endpoint and its required authentication parameters in one definition. By referencing a Named Credential in Apex code (e.g., `callout:MyExternalSystem/path`), the developer abstracts the literal URL away from the code itself.

If the URL changes, an administrator can simply update the Named Credential record in the Setup menu without requiring a code deployment or a change to the Apex class. Additionally, Named Credentials automatically handle the callout overhead for Remote Site Settings; you do not need to maintain a separate entry in Remote Site Settings if a Named Credential is used.

Connected Apps (Option B) are used to allow external applications to connect into Salesforce, not for making outbound callouts. Session IDs (Option D) are authentication tokens and do not manage endpoint URLs. By utilizing Named Credentials, developers ensure that their integration logic remains decoupled from environment-specific configurations, facilitating smoother transitions between sandboxes and production environments.

NEW QUESTION # 147

.....

The Salesforce PDII certification exam offers a great opportunity to advance your career. With the Platform Developer II certification exam beginners and experienced professionals can demonstrate their expertise and knowledge. After passing the Platform Developer II (PDII) exam you can stand out in a crowded job market.
