## SAP Certified Associate - WalkMe Digital Adoption Consultant Sample Questions (Q32-Q37):

### NEW QUESTION # 32

Which steps would you take to publish items to Production that you add to the user-facing Menu in the Menu Organizer?

- A. Adding items to the user-facing Menu are automatically published to Production.
- B. Adding an item to the user-facing Menu and clicking Save automatically publishes it to Production.
- **C. Manually publishing the item to Production after adding it to the Menu Organizer and saving it.**
- D. Changing the name of an added item in the Menu Organizer publishes it to Production.

### Answer: C

Explanation:

In WalkMe, adding items to the user-facing Menu via the Menu Organizer does not automatically publish them to Production. After adding and saving items in the Menu Organizer, Builders must manually publish the changes to the Production environment using the WalkMe Editor's publish feature. This ensures that only reviewed and tested content is deployed, maintaining control over what end users see.

The other options are incorrect:

- \* Option A is wrong because adding items requires manual publishing.
- \* Option B is incorrect, as renaming doesn't trigger publishing.
- \* Option D is false, as saving in the Menu Organizer doesn't publish to Production.

Extract from Official WalkMe Documentation:

According to the WalkMe Editor User Guide (SAP WalkMe Digital Adoption Consultant Study Guide, Section 1.5: WalkMe Menu):

"After adding items to the Menu Organizer and saving changes, manually publish the updated Menu to Production using the Editor's publish feature to make it available to end users." The course Getting Started with Building WalkMe Solutions states:

"To deploy Menu changes, add and save items in the Menu Organizer, then manually publish them to Production to ensure controlled deployment." Option C correctly describes the publishing process.

### NEW QUESTION # 33

What is the correct order of operations for determining if WalkMe content should appear on the page?

- A. Start Points > Web page loads > Segmentation
- B. Segmentation > Web page loads > Individual item conditions
- C. Individual item conditions > Segmentation > Web page loads
- **D. Web page loads > Segmentation > Individual item conditions**

### Answer: D

Explanation:

WalkMe follows a specific sequence to determine whether content should appear on a page:

- \* Web page loads: The page must load for WalkMe to initialize and evaluate content.
- \* Segmentation: Segmentation rules (e.g., user role, behavior) determine if the content is relevant to the user.
- \* Individual item conditions: Specific conditions for each content item (e.g., element visibility, URL rules) are checked to finalize display.

This order ensures that WalkMe efficiently evaluates global applicability before checking item-specific criteria, optimizing performance and relevance.

The other options are incorrect:

- \* Option A reverses the order of page load and segmentation.
- \* Option C includes Start Points, which are specific to Smart Walk-Thrus, not general content display.

\* Option D places individual conditions first, which is illogical as the page must load first.

Extract from Official WalkMe Documentation:

Per the WalkMe Editor User Guide (SAP WalkMe Digital Adoption Consultant Study Guide, Section 1.6: Content Display Logic):

"WalkMe content display follows this order: (1) Web page loads, initializing WalkMe; (2) Segmentation rules filter based on user attributes; (3) Individual item conditions, such as URL or element rules, determine final display." The course Getting Started with Building WalkMe Solutions explains:

"The sequence for content display is web page load, followed by segmentation to target users, and then individual item conditions to confirm content relevance." Option B correctly outlines the order of operations.

#### NEW QUESTION # 34

What is the function of WalkMe Discovery's License Optimization feature?

- A. To disable unused applications permanently
- B. To increase the number of applications used in an organization
- **C. To identify potential wasted spend on app licenses**
- D. To automatically renew software licenses without user intervention

**Answer: C**

Explanation:

WalkMe Discovery's License Optimization feature analyzes application usage data to identify potential wasted spend on app licenses. By tracking which licenses are underutilized or unused, it helps organizations optimize software investments, reducing costs without disrupting operations.

The other options are incorrect:

- \* Automatically renewing licenses (A) is not a WalkMe function.
- \* Disabling unused applications permanently (C) is too extreme; Discovery provides insights, not actions.
- \* Increasing applications (D) contradicts the goal of optimization.

Extract from Official WalkMe Documentation:

Per the SAP WalkMe Digital Adoption Consultant Study Guide (Section 3.6: WalkMe Discovery):

"The License Optimization feature in WalkMe Discovery identifies underused or unused software licenses, highlighting opportunities to reduce wasted spend." The course WalkMe Fundamentals explains:

"WalkMe Discovery's License Optimization helps organizations save costs by pinpointing licenses that are not fully utilized, enabling informed decisions." Option B correctly describes the function of License Optimization.

#### NEW QUESTION # 35

What does WalkMe's UI Intelligence feature do?

- **A. It analyzes form interactions and provides actionable insights**
- B. It blocks users from entering incorrect data
- C. It eliminates the need for data collection
- D. It forces users to complete forms without assistance

**Answer: A**

Explanation:

WalkMe's UI Intelligence feature analyzes form interactions and provides actionable insights by tracking how users engage with forms (e.g., fields skipped, errors made). This data, available in WalkMe Insights, helps organizations identify friction points, optimize form designs, and improve user completion rates, enhancing overall digital adoption.

The other options are incorrect:

- \* Forcing form completion (A) is not a WalkMe function; it focuses on guidance.

\* Blocking incorrect data(B) is partially true for Validation SmartTips, but not UI Intelligence's role.

\* Eliminating data collection(D) is false; UI Intelligence relies on data collection.

Extract from Official WalkMe Documentation:

Per the SAP WalkMe Digital Adoption Consultant Study Guide (Section 3.7: UI Intelligence):

"UI Intelligence analyzes user interactions with forms, providing insights into completion rates and errors to optimize form usability and user experience." The courseWalkMe Fundamentalsexplains:

"UI Intelligence delivers actionable insights by tracking form interactions, helping organizationsaddress user challenges and improve process efficiency." Option C accurately describes the UI Intelligence feature.
