

Latest PCCP Exam Topics, PCCP Quiz

Once you have practiced on our Palo Alto Networks Certified Cybersecurity Practitioner test questions, the system will automatically memorize and analyze all your practice. You must finish the model test in limited time. There have a timer on the right of the interface. Once you begin to do the exercises of the PCCP test guide, the timer will start to work and count down. If you don't finish doing the exercises, all your exercises of the PCCP Exam Questions will be delivered automatically. Then the system will generate a report according to your performance. You will clearly know where you are good at or not.

Palo Alto Networks PCCP Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Network Security: This domain targets a Network Security Specialist and includes knowledge of Zero Trust Network Access (ZTNA) characteristics, functions of stateless and next-generation firewalls (NGFWs), and the purpose of microsegmentation. It also covers common network security technologies such as intrusion prevention systems (IPS), URL filtering, DNS security, VPNs, and SSL• TLS decryption. Candidates must understand the limitations of signature-based protection, deployment options for NGFWs, cybersecurity concerns in operational technology (OT) and IoT, cloud-delivered security services, and AI-powered security functions like Precision AI.
Topic 2	<ul style="list-style-type: none">• Cloud Security: This section targets a Cloud Security Specialist and addresses major cloud architectures and topologies. It discusses security challenges like application security, cloud posture, and runtime security. Candidates will learn about technologies securing cloud environments such as Cloud Security Posture Management (CSPM) and Cloud Workload Protection Platforms (CWPP), as well as the functions of a Cloud Native Application Protection Platform (CNAPP) and features of Cortex Cloud.

Topic 3	<ul style="list-style-type: none"> Endpoint Security: This domain is aimed at an Endpoint Security Analyst and covers identifying indicators of compromise (IOCs) and understanding the limits of signature-based anti-malware. It includes concepts like User and Entity Behavior Analytics (UEBA), endpoint detection and response (EDR), and extended detection and response (XDR). It also describes behavioral threat prevention and endpoint security technologies such as host-based firewalls, intrusion prevention systems, device control, application control, disk encryption, patch management, and features of Cortex XDR.
Topic 4	<ul style="list-style-type: none"> Secure Access: This part of the exam measures skills of a Secure Access Engineer and focuses on defining and differentiating Secure Access Service Edge (SASE) and Secure Service Edge (SSE). It covers challenges related to confidentiality, integrity, and availability of data and applications across data, private apps, SaaS, and AI tools. It examines security technologies including secure web gateways, enterprise browsers, remote browser isolation, data loss prevention (DLP), and cloud access security brokers (CASB). The section also describes Software-Defined Wide Area Network (SD-WAN) and Prisma SASE solutions such as Prisma Access, SD-WAN, AI Access, and enterprise DLP.
Topic 5	<ul style="list-style-type: none"> Cybersecurity: This section of the exam measures skills of a Cybersecurity Practitioner and covers fundamental concepts of cybersecurity, including the components of the authentication, authorization, and accounting (AAA) framework, attacker techniques as defined by the MITRE ATT&CK framework, and key principles of Zero Trust such as continuous monitoring and least privilege access. It also addresses understanding advanced persistent threats (APT) and common security technologies like identity and access management (IAM), multi-factor authentication (MFA), mobile device and application management, and email security.

PCCP Quiz, PCCP Pass Test

If you want to PCCP practice testing the product of Pass4guide, feel free to try a free demo and overcome your doubts. A full refund offer according to terms and conditions is also available if you don't clear the Palo Alto Networks PCCP Practice Test after using the Palo Alto Networks Certified Cybersecurity Practitioner (PCCP) exam product. Purchase Pass4guide best PCCP study material today and get these stunning offers.

Palo Alto Networks Certified Cybersecurity Practitioner Sample Questions (Q189-Q194):

NEW QUESTION # 189

Which statement is true about advanced persistent threats?

- A. They typically attack only once.
- B. They use script kiddies to carry out their attacks.
- C. They have the skills and resources to launch additional attacks.
- D. They lack the financial resources to fund their activities.

Answer: C

Explanation:

An advanced persistent threat (APT) is a sophisticated, sustained cyberattack in which an intruder establishes an undetected presence in a network in order to steal sensitive data over a prolonged period of time. APTs are usually carried out by well-funded, experienced teams of cybercriminals that target high-value organizations, such as governments, military, or corporations. APTs have the skills and resources to launch additional attacks, as they often use advanced techniques to evade detection, move laterally within the network, and establish multiple entry points and backdoors. APTs are not interested in causing immediate damage or disruption, but rather in achieving long-term goals, such as espionage, sabotage, or theft of intellectual property. Therefore, option B is the correct answer among the given choices.

* 5: What Is an Advanced Persistent Threat (APT)? - Kaspersky

NEW QUESTION # 190

Which of the following is a service that allows you to control permissions assigned to users in order for them to access and utilize cloud resources?

- **A. Identity and Access Management (IAM)**
- B. User-ID
- C. User and Entity Behavior Analytics (UEBA)
- D. Lightweight Directory Access Protocol (LDAP)

Answer: A

Explanation:

Identity and access management (IAM) is a software service or framework that allows organizations to define user or group identities within software environments, then associate permissions with them. The identities and permissions are usually spelled out in a text file, which is referred to as an IAM policy.

NEW QUESTION # 191

Which SOAR feature coordinates across technologies, security teams, and external users for centralized data visibility and action?

- **A. Playbooks**
- B. Case management
- C. Ticketing system
- D. Integrations

Answer: A

Explanation:

Playbooks are collections of workflows that automate and orchestrate tasks, alerts, and responses to incidents.

Playbooks are triggered by rules or incidents and can coordinate across technologies, security teams, and external users for centralized data visibility and action. Playbooks can help improve the efficiency and effectiveness of security operations by reducing manual work, streamlining processes, and enhancing collaboration. NEW QUESTION # 192

Which three services are part of Prisma SaaS? (Choose three.)

- **A. Threat Prevention**
- B. DevOps
- C. Denial of Service
- **D. Data Loss Prevention**
- **E. Data Exposure Control**

Answer: A,D,E

Explanation:

Prisma SaaS is a cloud access security broker (CASB) solution that helps secure and manage SaaS applications. It provides advanced capabilities in risk discovery, data loss prevention, compliance assurance, data governance, user behavior monitoring, and advanced threat prevention¹2. The three services that are part of Prisma SaaS are:

* Data Loss Prevention: This service helps prevent the leakage or exposure of sensitive data stored in SaaS applications. It allows you to define data patterns, policies, and actions to protect your data from unauthorized access or sharing³.

* Data Exposure Control: This service helps identify and remediate data exposure risks in SaaS applications. It scans your data at rest and classifies it based on its sensitivity and exposure level. It also provides recommendations and remediation actions to reduce the risk of data breaches⁴.

* Threat Prevention: This service helps detect and block malicious activities and threats in SaaS applications. It leverages the WildFire and AutoFocus threat intelligence services to analyze user and file activity and identify indicators of compromise. It also

provides alerts and response actions to mitigate the impact of threats⁵.

NEW QUESTION # 193

What is a key benefit of Cortex XDR?

- A. It secures internal network traffic against unknown threats.
- B. It manages applications accessible on endpoints.
- **C. It acts as a safety net during an attack while patches are developed.**
- D. It reduces the need for network security.

Answer: C

Explanation:

Cortex XDR is a detection and response platform that natively integrates network, endpoint, and cloud data to stop sophisticated attacks. A key benefit of Cortex XDR is that it acts as a safety net during an attack while patches are developed. Cortex XDR uses machine learning and behavioral analytics to detect and validate threats, and automatically reveals the root cause of alerts to speed up investigations. Cortex XDR also enables flexible and rapid response actions to contain and remediate threats across the environment. NEW QUESTION # 194

.....

The PCCP mock exam setup can be configured to a particular style and arrive at unique questions. Pass4guide PCCP practice exam software went through real-world testing with feedback from more than 90,000 global professionals before reaching its latest form. Our Palo Alto Networks PCCP Practice Test software is suitable for computer users with a Windows operating system. Pass4guide Palo Alto Networks PCCP practice exam support team cooperates with users to tie up any issues with the correct equipment.
