Microsoft MB-500 Valid Mock Exam - MB-500 Exam Questions Fee

Our MB-500 learning prep is definitely the latest information on the market. As you know, the contents of many exams are constantly being updated, so you must choose the latest MB-500 practice quiz that can keep up with the times and ensure that the information you obtain is up-to-date. The staff really paid a lot of time and effort to ensure this. Of course, your ability to make a difference is our best reward with the help of the MB-500 Exam Questions.

Preparation Process

The Microsoft MB-500 Exam can be difficult but only if you don't study for it in the right way. So, if you are planning to ace this test, it is very important that you prepare for it properly. There are loads of resources that you can use to study for it, and luckily, you can find most of them on the Microsoft website.

Microsoft Dynamics 365: Finance and Operations Apps Developer Sample Questions (Q57-Q62):

NEW QUESTION # 57

A company uses Dynamics 365 Finance and Dynamics 365 Supply Chain Management. The company wants to use new functionality that relates to purchase requisitions.

You need to promote the new functionality to a test environment.

What should you do? To answer select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Requirement

Export the functionality from the current environment.

Import the functionality into the test environment.

Action

- Export the model from the Application Object Tree (AOT).
- Create a deployment package from the model.
- Create an extension as a managed solution.
- Export the model from the Application Object Tree (AOT).
- Export the project and create an .axpp file.
- Apply the update to the environment in Lifecycle Services.
- Apply the update to the environment in Lifecycle Services.
- Import the extension as a managed solution.
- Import the extension to Azure Data Lake.
- Upload the extension into the Lifecycle Services Asset library.

Answer:

Explanation:

NEW QUESTION # 58

You are a Dynamics 365 Finance developer. You have the following Extended Data Types (EDTs):

Name	Comments
AccountBase	Root EDT
AccountId	Derives from AccountBase

You plan to modify the EDT properties by using an extension.
 You need to determine which operations can be performed.
 Which operation is possible?

- A. Create a derived EDT for AccountId and decrease the field size.
- **B. Create an extension for AccountBase and increase the field size.**
- C. Create an extension for AccountBase and decrease the field size.
- D. Create an extension for AccountId and increase the field size.

Answer: B

Explanation:
 Explanation

You can only set the new String size to a value equal to or larger than the base EDT value.

Reference:

<https://docs.microsoft.com/en-us/dynamics365/fin-ops-core/dev-itpro/extensibility/modify-edt>

NEW QUESTION # 59

You are a Dynamics 365 Finance developer for a company that sells pre-owned vehicles. When the company acquires a new vehicle, vehicle identification (VIN) numbers are added to the VIN field in the CustTable.

You need to create an event handler to validate that new VIN values are at least 10 characters long. Validation must occur when records are saved- Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

- 1 - Copy the validatedWrite event handler on the CustTable table object.
- 2 - Copy the onModified event handler on the CustTable object
- 3 - Add code to perform the validation.

NEW QUESTION # 60

You are a Dynamics 365 Finance developer.

You need to configure integration between Dynamics 365 Finance and other tools.

Which integration types should you use? To answer, drag the appropriate integration types to the correct requirement. Each integration type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Integration types	Requirement	Integration type
<input type="checkbox"/> synchronous	Request information about product availability from a web page to calculate the extended price.	<input type="text"/>
<input type="checkbox"/> asynchronous	Periodically update a reporting database.	<input type="text"/>
	Edit data in Microsoft Excel by using the Excel Data Connector add-in.	<input type="text"/>
	Import a credit card data file once each day.	<input type="text"/>

Answer:

Explanation:

Integration types	Requirement	Integration type
<input checked="" type="checkbox"/> synchronous	Request information about product availability from a web page to calculate the extended price.	<input checked="" type="checkbox"/> synchronous
<input checked="" type="checkbox"/> asynchronous	Periodically update a reporting database.	<input checked="" type="checkbox"/> asynchronous
	Edit data in Microsoft Excel by using the Excel Data Connector add-in.	<input checked="" type="checkbox"/> synchronous
	Import a credit card data file once each day.	<input checked="" type="checkbox"/> asynchronous

Explanation

Requirement	Integration type
Request information about product availability from a web page to calculate the extended price.	<input checked="" type="checkbox"/> synchronous
Periodically update a reporting database.	<input checked="" type="checkbox"/> asynchronous
Edit data in Microsoft Excel by using the Excel Data Connector add-in.	<input checked="" type="checkbox"/> synchronous
Import a credit card data file once each day.	<input checked="" type="checkbox"/> asynchronous

Box 1: synchronous

A synchronous pattern is a blocking request and response pattern, where the caller is blocked until the callee has finished running and gives a response.

Box 2: Asynchronous

An asynchronous pattern is a non-blocking pattern, where the caller submits the request and then continues without waiting for a response.

Box 3: synchronous

Box 4: Asynchronous

A typical Batch job.

NEW QUESTION # 61

You have the following class definition:

```
class UnitConv
{
    public static real PoundsToKilograms(real _pounds)
    {
        return _pounds * 0.45359237;
    }
    public static real FahrenheitCelsius(real _fahrenheit)
    {
        return (_fahrenheit - 32) * 5/9;
    }
}
```

You need to create an extension class and create a new static method in it that converts miles to kilometers and then call the method from another class.

How should you complete the code and call the method? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Extension class definition:

[ExtensionOf(classStr (UnitConv))]

	▼
final class CustUnitConv_Extension	
final class UnitConv_MyExtension	
static class UnitConvMy_Extension	
class UnitClass_Extension	

```
{
    public static CaseMileage MiToKm(CaseMileage _miles)
    {
        return _miles * 1.609344;
    }
}
```

Call the method:

	▼
var km = UnitConv::MiToKm(62.1371);	
CaseMileage km = UnitConv_MyExtension::MiToKm(62.1371);	
UnitConvMy_Extension cUC = new UnitConv(); int km = cUC.MiToKm(62.1371);	
UnitConv_Extension uCE = new UnitConv(); real km = uCE.MiToKm(62.1371);	

Answer:

Explanation:

Extension class definition:

```
[ExtensionOf(classStr(UnitConv))]
```

```
final class CustUnitConv_Extension
final class UnitConv_MyExtension
static class UnitConvMy_Extension
class UnitClass_Extension
```

```
{
    public static CaseMileage MiToKm(CaseMileage _miles)
    {
        return _miles * 1.609344;
    }
}
```

Call the method:

```
var km = UnitConv::MiToKm(62.1371);
CaseMileage km = UnitConv_MyExtension::MiToKm(62.1371);
UnitConvMy_Extension cUC = new UnitConv(); int km = cUC.MiToKm(62.1371);
UnitConv_Extension uCE = new UnitConv(); real km = uCE.MiToKm(62.1371);
```
