#### NEW QUESTION # 101

An international bank wants to provide regional analysts with business-ready data models without granting direct access to raw data sources. What features should be implemented?

There are 3 correct answers to this question.

Response:

- A. Role-based permissions to restrict access
- B. Business Content Import from SAP NetWeaver
- C. Direct SQL access to source systems
- D. Data Catalog to organize and tag shared models
- E. Business Builder to define and expose semantic views

**Answer: A,D,E**

#### NEW QUESTION # 102

You want to combine external data with internal data via product ID. Although the data may be inconsistent, such as the external data contains the letter "O" where the internal data contains the digit 0, you still want to combine them. Which artifact should you use for matching?

- A. Entity Relationship Model
- B. Analytic Model
- C. Intelligent Lookup
- D. Graphical View

**Answer: C**

Explanation:

When faced with the challenge of combining data from different sources where the matching keys (like "Product ID") are inconsistent or contain variations (e.g., "O" vs. "0"), the recommended artifact in SAP Datasphere for such fuzzy or approximate matching scenarios is an Intelligent Lookup. An Intelligent Lookup (D) leverages machine learning capabilities to identify and map records that are semantically similar but not exact matches. Unlike standard joins in graphical views or SQL views which require precise key matches, Intelligent Lookups can handle data quality issues, typos, and variations, allowing you to successfully link disparate records that would otherwise be missed. This is particularly valuable when integrating data from external systems or legacy sources where perfect data standardization is not feasible, ensuring a more comprehensive and accurate combined dataset for analysis.
