In line with the concept that providing the best service to the clients, our company has forged a dedicated service team and a mature

and considerate service system. We not only provide the free trials before the clients purchase our EMEA-Advanced-Support training materials but also the consultation service after the sale. We provide multiple functions to help the clients get a systematical and targeted learning of our EMEA-Advanced-Support Certification guide. So the clients can trust our EMEA-Advanced-Support exam materials without doubt.

## Fortinet EMEA Advanced Support Exam Sample Questions (Q46-Q51):

### NEW QUESTION # 46

What is the purpose of the FortiGate 'diagnose debug flow' command?

- A. To monitor system performance metrics
- **B. To show the packet flow through firewall policies**
- C. To troubleshoot routing table issues
- D. To display real-time packet captures

**Answer: B**

Explanation:

The 'diagnose debug flow' command in FortiGate is used to troubleshoot how packets are processed through firewall policies, showing details like policy matching, NAT, and session handling. It helps identify why packets are allowed or dropped. Option A refers to packet sniffing, B to routing diagnostics, and D to performance monitoring, none of which are the primary function. Exact extract: "The diagnose debug flow command displays the packet flow through FortiGate, including policy matching, NAT, and session details, useful for troubleshooting traffic issues."

### NEW QUESTION # 47

What is the role of the FortiGate 'set srcintf' command in a firewall policy?

- A. Defines the destination interface for traffic
- **B. Specifies the source interface for traffic matching**
- C. Sets the source IP address range
- D. Configures the source NAT interface

**Answer: B**

Explanation:

The 'set srcintf' command in a FortiGate firewall policy specifies the source interface from which traffic originates, helping define the policy's scope. It does not set the destination interface (B), source IP range (C), or NAT interface (D). Exact extract: "The 'set srcintf' command in a firewall policy specifies the source interface for incoming traffic, allowing FortiGate to match packets based on their entry interface."

### NEW QUESTION # 48

A Company is running an outdated version of a Webserver software that is vulnerable to multiple code execution and injection attacks. Which Security feature can protect the Webserver until the security patches are applied?

- A. Anti-virus Protection
- B. Anti rootkit Protection
- **C. Intrusion Prevention System**
- D. Intrusion Detection System

**Answer: C**

Explanation:

An Intrusion Prevention System (IPS) actively blocks malicious traffic, such as code execution or injection attacks, by matching against known signatures or anomalies, protecting the webserver until patches are applied. Intrusion Detection System (IDS) only detects and alerts, not blocks. Anti-virus and anti-rootkit are less effective for web-based attacks. The original document's answer B is incorrect, as IDS does not prevent attacks. Exact extract: "IPS provides active protection by blocking malicious traffic based on signatures or anomaly detection... Unlike IDS, which only detects and alerts, IPS can drop packets to prevent attacks like code execution or SQL injection."

#### NEW QUESTION # 49

Which command would you use to verify the status of an IPsec VPN tunnel on a FortiGate?

- A. diagnose vpn tunnel list
- B. get vpn ipsec status
- C. show crypto ipsec sa
- D. diagnose ipsec status

**Answer: A**

Explanation:

The 'diagnose vpn tunnel list' command on FortiGate displays detailed status information about IPsec VPN tunnels, including phase 1 and phase 2 states, uptime, and traffic statistics. Options B, C, and D are not valid FortiGate commands for this purpose. Exact extract: "Use diagnose vpn tunnel list to view the status of IPsec VPN tunnels, including phase 1 and phase 2 details, such as SA status, uptime, and traffic counters."

#### NEW QUESTION # 50

Which protocols are used by an email client to retrieve emails?

- A. POP3
- B. IMAP4
- C. SMTP
- D. SNMP

**Answer: A,B**

Explanation:

Email clients use POP3 (Post Office Protocol) and IMAP4 (Internet Message Access Protocol) to retrieve emails from a server. POP3 downloads emails and typically removes them from the server, while IMAP4 allows synchronized access. SMTP is used for sending emails, and SNMP is for network monitoring, not email retrieval. Exact extract: "Email clients use POP3 or IMAP to retrieve email messages from a mail server... IMAP allows users to access and manage email directly on the server, while POP3 typically downloads messages to the client."

#### NEW QUESTION # 51

.....

Fortinet EMEA-Advanced-Support Practice Material is from our company which made these EMEA-Advanced-Support practice materials with accountability. And EMEA-Advanced-Support Training Materials are efficient products. What is more, Fortinet EMEA-Advanced-Support Exam Prep is appropriate and respectable practice material.

**EMEA-Advanced-Support Reliable Exam Testking:** <https://www.dumpstorrent.com/EMEA-Advanced-Support-exam-dumps-torrent.html>

Firstly, we have free trials of the EMEA-Advanced-Support exam study materials to help you know our products, We get a part of regular customer owing to our high pass-rate EMEA-Advanced-Support pass-sure torrent questions, We are known by others because of our high passing rate so many users recommend our EMEA-Advanced-Support training materials to their friends and colleagues, This EMEA-Advanced-Support exam material contains all kinds of actual Fortinet EMEA-Advanced-Support exam questions and practice tests to help you to ace your exam on the first attempt.
