Appian Senior Developer Sample Questions (Q60-Q65):

NEW QUESTION # 60
You're building a new application to track job applications for a local health club.
The owner wants to have one group of individuals perform the initial application review for completeness, a second group to manage the interview process, and a third group to make the actual hiring decisions.
Which design element should be implemented to best support a memory efficient application?

- A. Create an entity-backed record for each of the open positions.
- B. Break up the application into subprocesses representing each of the different stages of the process to reduce memory use.
- C. Create a synchronous process that accurately tracks a candidate's application from start to finish to ensure the hiring group has access to all the information necessary to make a decision.

Answer: B

Explanation:
Breaking up the application into subprocesses for each stage allows each part to be short-lived and releases memory as each subprocess completes, resulting in a more memory-efficient application.

NEW QUESTION # 61
You need to create a new database schema using a connected data source system.
What should you do?
Note: To answer, move all steps from the Options list to the Answer List area and arrange them in the correct order.

NEW QUESTION # 62

Which section of the Interface Performance View explains the contribution towards the overall evaluation time of the current function, rule, or parameter?

- A. Precedent Functions and Rules
- B. Descendant Rules
- C. Parameters and Direct Children

Answer: C

Explanation:

The "Parameters and Direct Children" section of the Interface Performance View explains the contribution towards the overall evaluation time of the current function, rule, or parameter.

NEW QUESTION # 63

You're establishing a Health Check schedule for your department.
Which two statements should you consider when implementing Health Checks? (Choose two.)

- A. Run Health Checks during regular non-business hours in production to avoid slowing down the environment.
- B. Configure a weekly Health Check cadence for the development environment.
- C. Run Health Checks during regular business hours in production to identify issues during heavy usage.
- D. Run a Health Check at least once a month in production as part of server and application monitoring.

Answer: A,D

Explanation:

Running a Health Check at least once a month in production is best practice for ongoing monitoring and early issue detection.
Running Health Checks during non-business hours in production helps avoid performance impact on end users.

NEW QUESTION # 64

You're reviewing the process model built by your team member.
Which two design decisions might cause performance issues? (Choose two.)

- A. No target process for the Send Message event
- B. Asynchronous subprocess
- C. Too many nodes
- D. Data types passed by reference

Answer: A,C

Explanation:

Having no target process for the Send Message event can cause unnecessary processing and delays.
Too many nodes in a process model increase complexity and processing overhead, leading to potential performance issues.
