AWS-Advanced-Networking-Specialty Exam Pass Guide, AWS-Advanced-Networking-Specialty Valid Study Notes

When you purchase AWS-Advanced-Networking-Specialty exam dumps from Dumpcollection, you never fail AWS-Advanced-Networking-Specialty exam ever again. We bring you the best AWS-Advanced-Networking-Specialty exam preparation dumps which are already tested rigorously for their authenticity. Start downloading your desired AWS-Advanced-Networking-Specialty Exam product without any second thoughts. Our AWS-Advanced-Networking-Specialty products will make you pass in first attempt with highest scores. We accept the challenge to make you pass AWS-Advanced-Networking-Specialty exam without seeing failure ever!

To prepare for the AWS Certified Advanced Networking Specialty exam, candidates should have extensive hands-on experience with AWS networking services and should also review the AWS documentation and whitepapers related to networking. AWS also offers a variety of training courses and certification prep resources, including instructor-led courses, online training, and practice exams.

Amazon AWS Certified Advanced Networking Specialty (ANS-C00) Exam Sample Questions (Q39-Q44):

NEW QUESTION # 39

Which statement about Elastic IP addresses is incorrect? Choose the correct answer:

- A. Additional EIPs associated with one instance incur a charge.
- B. Once you associate an EIP with an instance, the original public IP is released.
- C. Once an EIP is associated with an instance, you must manually change the hostname if you want it to match.
- D. Disassociated EIPs incur a charge.

Answer: C

Explanation:

The hostname automatically changes to match the new EIP.

NEW QUESTION # 40

An organization will be expanding its current network design. When fully built out, there will be 99 VPCs spread across 11 AWS accounts (9 VPCs per account). There is currently an AWS Direct Connect connection into one account with 9 VPCs, each with a virtual network interface (VIF) per VPC.

Which of the following designs will minimize cost while allowing the organization to expand?

- A. Create a public VIF on the Direct Connect connection. Leverage the public VIF to create a VPN connection to each VPC.
- B. Order 10 new Direct Connect connections, one from each of the accounts that will be provisioned. Create private VIFs in each account. Attach one private VIF per VPC.
- C. Create hosted private VIFs in the existing account. Connect a private VIF to an AWS Direct Connect gateway in each account. Connect the gateway in each account to the VPCs.
- **D. Create a transit VPC in the existing account that consists of two routers in separate Availability Zones. Connect each VPC to the two routers in the transit VPC by using VPN.**

Answer: D

NEW QUESTION # 41

You can use the ____ command of the AWS Config service CLI to see the compliance state for each AWS resource of a specific type.

- **A. describe-compliance-by-resource**
- B. describe-compliance-by-config-rule
- C. get-compliance-details-by-resource
- D. get-compliance-details-by-config-rule

Answer: A

Explanation:

You can use the AWS Config console, AWS CLI, or AWS Config API to view the compliance state of your rules and resources. The describe-compliance-by-resource command of the AWS Config CLI to see the compliance state for each AWS resource of a specific type. This is distinct from the describe-compliance-by-config-rule command, which gives the compliance state of each rule in AWS Config.

http://docs.aws.amazon.com/config/latest/developerguide/evaluate-config_view-compliance.html

NEW QUESTION # 42

A customer is using ABC Telecom as a network provider. The customer has 10 different offices connected to ABC Telecom's MPLS backbone. The customer is setting up an AWS Direct Connect connection to AWS and has provided the LOA-CFA to ABC Telecom. ABC Telecom has terminated the Direct Connect circuit into their MPLS backbone. To uniquely identify the customer's traffic over the MPLS backbone, the customer must encapsulate all traffic with VLAN tag 100. The customer wants to send traffic to multiple VPCs.

Which two steps should be taken to meet the customer's requirement? (Select two.)

- **A. ABC Telecom creates a support ticket with AWS to exchange MPLS labels and include the AWS port as part of their MPLS network.**
- B. The customer performs Q-in-Q tunneling, with the AWS-required VLAN tag in the inside and VLAN 100 as the outside tag.
- C. Create a support ticket with AWS to request the removal of the outer VLAN tag 100 as the traffic reaches AWS routers.
- D. ABC Telecom removes the other tag before sending the packet to AWS.
- **E. Send the traffic for all VPCs with the same VLAN tag 100 and use BGP to ensure that proper routing takes place to the appropriate VPC.**

Answer: A,E

NEW QUESTION # 43

You have set up an S3 endpoint, and you want to restrict some instances from being able to access it. These instances are all in the same subnet, so you cannot simply remove the prefix list from the route table. What two approaches can you take to solve this? Choose the 2 correct answers:

- **A. Remove any access to the PL in the security group attached to the instances.**
- B. This is not possible.
- C. Add A rule in the NACL to block the prefix list ID outbound.
- **D. Modify the endpoint policy.**

Answer: A,D

Explanation:

You cannot add a prefix list ID to a NACL.
