Applicants of the Order-Management-Administrator test who invest the time, effort, and preparation with updated Order-Management-Administrator questions eventually get success. Without the latest Salesforce Order Management Administrator Accredited Professional (Order-Management-Administrator) exam dumps, candidates fail the test and waste their time and money. As a result, preparing with actual Order-Management-Administrator Questions is essential to clear the test.

Salesforce Order Management Administrator Accredited Professional Sample Questions (Q45-Q50):

NEW QUESTION # 45

An administrator needs to import Order Summary records containing historical data but does not want them to be actioned on by Order Management. Which feature supports this use case?

- A. Custom checkbox
- **B. Unmanaged Order Checkbox**
- C. Order Management Type Picklist
- D. Order Life Cycle Type Picklist

Answer: B

Explanation:

Explanation

The feature that supports this use case is the Unmanaged Order Checkbox. This is a standard field on the Order Summary object that indicates whether the order is managed by Order Management or not. If this field is checked, then the order is not actioned on by Order Management, and it does not trigger any flows or processes. The administrator can use this field to import Order Summary records containing historical data without affecting the order lifecycle. NEW QUESTION # 46

An admin is analyzing project requirements and notes that there are requirements to support both high volume and multiple locations. What is the recommended approach for this scenario?

- A. Download the Multiple Locations sample flow from the Partner Community and have developers add Apex code to enhance performance
- B. Download the Single Location High Volume sample flow from the Partner Community and modify all the flows to loop through locations
- **C. Download the Single Location High Volume sample flow and the Multiple Locations sample flow from the Partner Community and make a blend between the two considering trade-offs**
- D. Download the Single Location High Volume sample flow from the Partner Community and have the developers add Apex code to enhance performance

Answer: C

Explanation:

The Single Location High Volume sample flow and the Multiple Locations sample flow are two examples of how to implement order fulfillment with Order Management. The Single Location High Volume sample flow is optimized for performance and scalability, but it only supports one fulfillment location per order. The Multiple Locations sample flow supports multiple fulfillment locations per order, but it has lower performance and scalability. To support both high volume and multiple locations, an admin can download both sample flows from the Partner Community and make a blend between them, considering trade-offs such as complexity, maintainability, and customizability. NEW QUESTION # 47

When can an Invoice be created?

- **A. At any point after the Fulfillment Order is created, by customizing flow 'Create Invoice'**
- B. At any point after the Fulfillment Order is created, by customizing flow 'Create Invoice and Ensure Funds'
- C. At any point before the Fulfillment Order is created, by customizing flow 'Create Invoice and Ensure Funds'
- D. At any point before the Fulfillment Order is created, by customizing flow 'Create invoice'

Answer: A

Explanation:

The correct time and way for creating an Invoice is at any point after the Fulfillment Order is created, by customizing flow "Create Invoice". This flow is a core action that creates an Invoice record from a Fulfillment Order record, and updates the status of both records accordingly. The administrator can customize this flow to suit their business needs, such as adding conditions, actions, or subflows. Verified References:

NEW QUESTION # 48

What does the number of Fulfillment Orders created depend upon?

- A. Fulfillment Location, Delivery Method and Number of Payments
- B. Fulfillment Location, Delivery Charges and Quantity
- **C. Fulfillment Location, Delivery Method and Recipient Address**
- D. Fulfillment Location, Recipient Address and Quantity

Answer: C

Explanation:

The number of Fulfillment Orders created depends on three factors: Fulfillment Location, Delivery Method and Recipient Address. These factors determine how the Order Items are grouped and allocated to Fulfillment Orders based on routing rules and inventory availability. For example, if an order has two items that can be fulfilled from different locations, or have different delivery methods or recipient addresses, then two Fulfillment Orders are created for that order. NEW QUESTION # 49

Which set of conditions is required for an Order Summary object to be created?

- **A. An Order is created, the Create Order Summary Process is installed and the Create Order Summary Process is active**
- B. An Order is created, its status is set to Activated. Create OrderSummary Flow is installed and the Create OrderSummary Process is installed.
- C. An Order is created, its status is set to Activated. Create OrderSummary Flow is installed and Create OrderSummary Flow is activated.
- D. An Order is created, its status is set to Draft, Create OrderSummary Flow is installed and Create OrderSummary Flow is activated.

Answer: A

Explanation:

The Order Summary object is a custom object that stores information about an order, such as the total amount, the number of items, and the fulfillment status. The Order Summary object is created by a process called Create Order Summary Process, which runs whenever an order is created or updated. The process calls a flow called Create OrderSummary Flow, which calculates the order summary fields and creates or updates the order summary record. The process and the flow are part of the Order Management package and must be installed and activated for the order summary object to be created.
