## Study 220-1202 Center & 220-1202 New Braindumps Questions

Compared with companies that offer a poor level of customer service, our 220-1202 exam questions have over 98 percent of chance to help you achieve success. Up to now, we have had thousands of letters and various feedbacks from satisfied customers who are all faithful fans of our 220-1202 Study Guide, and the number of them is keeping growing. So our 220-1202 practice materials are the clear performance and manifestation of our sincerity. You really should have a try on our 220-1202 exam dumps!

## CompTIA A+ Certification Exam: Core 2 Sample Questions (Q89-Q94):

### NEW QUESTION # 89

A support specialist needs to decide whether to install a 32-bit or 64-bit OS architecture on a new computer. Which of the following specifications will help the specialist determine which OS architecture to use?

- A. Intel i7 CPU
- B. 1Gbps Ethernet
- C. 500GB HDD
- D. 16GB RAM

**Answer: D**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The amount of installed RAM is the key factor in determining whether a 64-bit OS is needed. A 32-bit operating system cannot

effectively address more than 4GB of RAM. Since this system has 16GB of RAM, a 64-bit OS is required to utilize the full memory.

B: An Intel i7 CPU supports both 32-bit and 64-bit OS installations, so it alone doesn't determine the need.

C: HDD size does not influence OS architecture selection.

D: Ethernet speed is a network consideration and not related to OS architecture.

Reference:

CompTIA A+ 220-1102 Objective 1.4: Given a scenario, choose the appropriate Microsoft OS installation methods and configurations.

Study Guide Section: 32-bit vs. 64-bit system requirements and memory limitations

### NEW QUESTION # 90

A user's computer is running slowly. Web pages take several seconds to open, and applications are slow to respond. A technician opens the Windows Task Manager and sees the following:

Disk: 2%

Network: 12%

GPU: 15%

CPU: 70%

Memory: 97%

Which of the following would a technician most likely do to resolve the issue?

- A. Clear browser cached data
- B. Upgrade the network connection
- C. Close unnecessary programs
- D. Delete temporary files

**Answer: C**

Explanation:

High memory usage (97%) suggests the system is overloaded with active processes. The technician should close unneeded applications to free up RAM and improve performance.

### NEW QUESTION # 91

An international traveler is concerned about others accessing the contents of their smartphone if it is lost or stolen. The traveler has enabled biometrics. Which of the following additional security measures further reduces the risk of unauthorized data access?

- A. PIN code screen lock
- B. Remote backups
- C. Device encryption
- D. Location tracking

**Answer: C**

Explanation:

Device encryption further reduces the risk of unauthorized data access by ensuring the contents of the smartphone cannot be read without proper authentication, even if the device is lost or stolen.

### NEW QUESTION # 92

An administrator received an email stating that the OS they are currently supporting will no longer be issued security updates and patches. Which of the following is most likely the reason the administrator received this message?

- A. A new version of the OS will be released soon.
- B. The built-in security software is being removed from the next OS version.
- C. Support from the computer's manufacturer is expiring.
- D. The OS will be considered end of life.

**Answer: D**

Explanation:

When an operating system reaches end of life (EOL), the vendor ceases issuing security updates and patches. Administrators are notified so they can plan upgrades or migrations before support ends.

### NEW QUESTION # 93

After a recent system update, a user's Windows 11 computer begins to experience slower boot times. The user notices additional icons are in the system tray. Which of the following should a technician do first to resolve the issue?

- A. Run a full system antivirus scan.
- B. Increase virtual memory allocation.
- C. **Disable unnecessary startup applications.**
- D. Uninstall the recent system update.
- E. Perform a system restore to a point before the update.

**Answer: C**

Explanation:

Extra icons in the system tray after an update often indicate new background apps loading at startup, increasing boot time. The Mike Meyers Lab Manual explains that "autostarting programs will slow down your system," and Windows provides control through Task Manager's Startup tab to enable/disable startup programs—specifically calling this out as useful "especially if Windows is slow to load." The All-in-One Exam Guide gives the same practical step: open Task Manager's Startup tab and "review the enabled applications for any you don't need," then disable unnecessary ones to regain speed.

Importantly, the All-in-One answer guidance explicitly notes that disabling unnecessary startup programs is the least disruptive first action: "Andre's best option would be to disable unnecessary startup programs... A system restore might help... but it'll be much slower and more disruptive." Uninstalling the update or restoring the system are more disruptive and should come later if simpler optimization fails. Antivirus scanning can be appropriate if no obvious cause exists, but the clear clue here is new startup items (system tray icons).

### NEW QUESTION # 94

.....

The 220-1202 exam questions are being offered in three formats. These formats are CompTIA 220-1202 web-based practice test software, desktop practice test software, and PDF dumps files. All these three 220-1202 exam Dumps formats are ready for download. Just choose the best CompTIA 220-1202 Certification Exams format that suits your budget and assist you in CompTIA 220-1202 exam preparation and start 220-1202 exam preparation today.
