Google Cloud Digital Leader Sample Questions (Q352-Q357):

NEW QUESTION # 352

Your application has repeated data requests of the exact same nature. At the same time, the number of user requests is increasing. Monitoring indicates that the load on the existing database is increasing, and there seems to be a bottleneck. An analysis of the data requested shows us that it is application-managed data and that it changes, but not often. How can you improve the efficiency of the application?

- A. Increase the amount of RAM on the machine hosting the database so that it has higher data throughput.
- B. Increase the number of CPUs on the machine hosting the database so that it has higher data throughput.
- C. Use Cloud Storage with multi-regional storage so that all users accessing the data will have lower latency
- **D. Use Cloud Memorystore to improve speed via caching**

Answer: D

Explanation:

Explanation

Cloud Memorystore is an in-memory database that has sub-millisecond latency. This is ideal for caching application data that also changes once in a while.

NEW QUESTION # 353

Google offers Firebase, In terms of Firebase Console, any particular message that has to be delivered to a customer at a certain degree of change in behavior can be managed through _____.

- **A. Notification Composer**
- B. None of the above
- C. Firebase Remote config.
- D. A/B testing

Answer: A

Explanation:

You can send notification messages using the Notifications composer in the Firebase console. Though this does not provide the same flexibility or scalability as sending messages with the Admin SDK or the HTTP and XMPP protocols, it can be very useful for testing or for highly targeted marketing and user engagement.

The Firebase console provides analytics-based A/B testing to help refine and improve marketing messages.

After you have developed logic in your app to receive messages, you can allow non-technical users to send messages per the instructions on the Notifications page in the Firebase Help Center.

NEW QUESTION # 354

An organization wants full control of their virtual machine infrastructure for a custom home-grown application with a product that autoscales and automatically updates.

Which Google Cloud product or solution should the organization use?

- **A. Compute Engine**
- B. Cloud Build
- C. Cloud Run
- D. App Engine

Answer: A

Explanation:

Compute Engine will allow you to have full control of their VM infrastructure and you can autoscale and also apply automatic updates.

NEW QUESTION # 355

An organization is looking for a storage solution that will help them serve content to users worldwide. They need a solution that offers a high level of availability. What feature of Cloud Storage would they benefit from?

- A. Object versioning
- B. Global metadata
- C. Data encryption
- **D. Multi-regional storage**

Answer: D

NEW QUESTION # 356
