Fortinet NSE 6 - FortiSOAR 7.3 Administrator Sample Questions (Q11-Q16):

NEW QUESTION # 11

What are two different services that you can configure for monitoring system and cluster health statuses on FortiSOAR? (Choose two.)

- A. SMTP
- B. POP
- C. Exchange
- D. IMAP

Answer: A,C

NEW QUESTION # 12

Which service on FortiSOAR is the playbook scheduler?

- A. uwsgi
- B. colcrybeatd
- C. celeryd
- D. cyops-torccat

Answer: B

Explanation:

In FortiSOAR, the service responsible for the playbook scheduling functionality is colcrybeatd. This service manages the timing and execution of scheduled playbooks, allowing for the automation of various tasks at specified intervals. It ensures that playbooks execute according to their configured schedules, which can include tasks such as data ingestion, threat detection, or incident response actions. Proper functioning of this service is essential for the reliable automation of time-dependent processes within FortiSOAR.

NEW QUESTION # 13

An administrator wants to collect and review all FortiSOAR log files to troubleshoot an issue. Which two methods can they use to accomplish this? (Choose two.)

- A. Download the logs from the GUI.
- B. Review the contents of /var/log/messages.
- C. Enter the caacta log -collect directory command.
- D. Enter the csacta services -status command, and then copy the output.

Answer: A,C

Explanation:

Administrators can collect and review FortiSOAR logs for troubleshooting in two primary ways. First, they can download logs directly from the GUI, which provides access to various logs through an intuitive interface.

Secondly, using the command-line interface, the csacta log --collect command can be used to gather all logs within a specified directory, enabling more detailed offline analysis. Both methods offer comprehensive log collection to aid in diagnosing and resolving issues.

NEW QUESTION # 14

Refer to the exhibit.

Nodes			
Node Name	Status	Role	License Details
primary.internal.lab	Faulted	Secondary	Serial Number: FSRVMPTM20000484 Total Users: 2 Device UUID: 520e3f3badcd9647b829c8905fec465b
secondary.internal.lab	Active	Primary	Serial Number: FSRVMPTM21000105 Total Users: 2 Device UUID: 927ee24c7eabd13e684c996bd04ea968

The former primary node was relegated to the secondary role but is stuck in the Faulted state.

Which two steps must you take to restore operation in the high availability (HA) cluster? (Choose two.)

- A. On the node that is in the Faulted state, enter the `csadm ha leave-cluster` command.
- B. Restart the node that is in the Faulted state to trigger another election.
- C. Perform a fire drill to test the database integrity of the node that is in the Faulted state.
- D. Enter the `csadm ha join-cluster` command to have the node that is in the Faulted state rejoin the HA cluster as a secondary node.

Answer: A,D

Explanation:

In a FortiSOAR HA cluster, if the former primary node is relegated to a secondary role but is stuck in a Faulted state, it indicates that the node has lost sync or faced a failure during a role change. To restore its functionality, first, you should remove it from the cluster using the `csadm ha leave-cluster` command. Once it has left the cluster, you can use the `csadm ha join-cluster` command to re-add the node as a secondary node. This process will allow it to sync back up with the cluster and resume its role as intended.

NEW QUESTION # 15

Which two statements about upgrading a FortiSOAR HA cluster are true? (Choose two.)

- A. It is recommended that the passive secondary node be upgraded first, and then the active primary node.
- B. Nodes can be upgraded while the primary node or secondary node are in the HA cluster.
- C. Upgrading a FortiSOAR HA cluster requires no downtime.
- D. The upgrade procedure for an active-active cluster and an active-passive cluster are the same.

Answer: A,D

Explanation:

Upgrading a FortiSOAR HA cluster follows the same procedure regardless of whether it is configured in an active-active or active-passive setup. The process generally involves upgrading one node at a time to minimize service disruption. Best practices recommend upgrading the passive secondary node first before moving to the active primary node. This sequence helps maintain cluster stability and ensures that at least one node remains operational during the upgrade.

NEW QUESTION # 16

.....

In today's society, there are increasingly thousands of people put a priority to acquire certificates to enhance their abilities. With a total new perspective, our NSE6_FSR-7.3 study materials have been designed to serve most of the office workers who aim at getting a NSE6_FSR-7.3 certification. Our NSE6_FSR-7.3 Test Guide keep pace with contemporary talent development and makes every learner fit in the needs of the society. There is no doubt that our NSE6_FSR-7.3 latest question can be your first choice for your relevant knowledge accumulation and ability enhancement.
