CompTIA A+ Certification Exam: Core 1 (220-1101) covers a broad range of topics related to computer hardware, software, and networking. 220-1101 exam focuses on the basics of computer systems, including installation, configuration, and maintenance. It also covers topics such as troubleshooting, security, and mobile device support. 220-1101 Exam consists of 90 questions, which must be completed within 90 minutes. A passing score is 675 out of 900.

CompTIA A+ Certification Exam: Core 1 Sample Questions (Q717-Q722):

NEW QUESTION # 717

A technician installed four hard drives in a RAID 5 configuration. After creating the array, the technician is unable to copy files to the array within Windows. Which of the following should the technician do next?

- A. Check the hot spare status.
- B. Rebuild the array.
- C. Decrease the number of drives to three.
- D. Partition and format the volume.

Answer: D

Explanation:

After setting up a RAID 5 array, the next step is to make the storage space usable by the operating system. This involves partitioning the array to define how the storage space is organized and then formatting it with a file system that the operating system can understand, thus making it possible to copy files to the array. Decreasing the number of drives, rebuilding the array, or checking the hot spare status would not address the issue of the array not being ready to store files.

NEW QUESTION # 718

A financial institution needs a secure way to protect encryption keys used for unlocking chips on its credit cards. Which of the following should the institution use?

- A. AMD
- B. TLS
- **C. HSM**
- D. ARM

Answer: C

Explanation:

A Hardware Security Module (HSM) securely manages cryptographic keys, including those used to protect credit card chips.

* Why Not A (TLS): TLS secures data in transit, not encryption key storage.

* Why Not B (AMD): AMD refers to processors, not security modules.

* Why Not D (ARM): ARM is a processor architecture, not a cryptographic security solution.

NEW QUESTION # 719

Which of the following does a DHCP reservation MOST likely apply to?

- A. Smart TV
- B. Mobile device
- C. Workstation
- **D. Printer**

Answer: D

Explanation:

Explanation

A DHCP reservation is a feature that allows a DHCP server to assign a specific IP address to a specific device on a network, based on its MAC address. This ensures that the device always receives the same IP address, even if it is disconnected or rebooted. A DHCP reservation is most likely applied to a printer, as it can make it easier for users to find and connect to the printer on the network, without having to change the printer settings or deal with IP address conflicts. NEW QUESTION # 720

Joe, a customer, just purchased a new smartphone. He would like to be able to transfer information from one device to another without a physical connection. Using the same feature, he also wants to be able to make purchases on the phone.

Which of the following settings should Joe enable on the phone?

- **A. NFC**
- B. Tethering
- C. Hotspot
- D. Bluetooth

Answer: A

NEW QUESTION # 721

A technician is upgrading a desktop's storage with the fastest option available. The desktop's motherboard is equipped with SATA III, NVMe, and IDE. Which of the following should the technician choose for the best performance?

- A. M.2 SSD connected via SATA interface
- B. 2.5in (6.35cm) SSD connected via SATA interface
- **C. PCIe SSD connected via NVMe interface**
- D. 3.5in (8.9cm) 10,000rpm HDD connected via IDE interface

Answer: C

Explanation:

The best option that the technician should choose for the best performance is A. PCIe SSD connected via NVMe interface. This option means that the technician should install a solid state drive (SSD) that uses the PCIe (Peripheral Component Interconnect Express) bus and the NVMe (Non-Volatile Memory Express) protocol to communicate with the motherboard. This option can offer the following advantages:

- * Faster speed: PCIe SSDs can transfer data faster than SATA or IDE SSDs, as they use more lanes and have higher bandwidth. PCIe SSDs can reach speeds of up to 7,000 MB/s, while SATA SSDs are limited to 600 MB/s and IDE SSDs are even slower¹². NVMe is a protocol that is designed specifically
- * for SSDs and can optimize their performance by reducing latency and increasing parallelism³.
- * Smaller size: PCIe SSDs can be smaller than SATA or IDE SSDs, as they do not require additional cables or connectors. PCIe SSDs can come in different form factors, such as M.2 or U.2, which can fit in different slots on the motherboard¹².
- * Higher reliability: PCIe SSDs can be more reliable than SATA or IDE SSDs, as they have less moving parts and are less prone to mechanical failures or data corruption. PCIe SSDs can also support features such as error correction and wear leveling, which can enhance their durability and lifespan¹².
