Splunk Certified Cybersecurity Defense Analyst Sample Questions (Q79-Q84):

NEW QUESTION # 79

An organization is using Risk-Based Alerting (RBA). During the past few days, a user account generated multiple risk observations. Splunk refers to this account as what type of entity?

- A. Risk Factor
- **B. Risk Object**
- C. Risk Analysis

- D. Risk Index

Answer: B

NEW QUESTION # 80

In which phase of the Continuous Monitoring cycle are suggestions and improvements typically made?

- A. Establish and Architect
- B. Implement and Collect
- **C. Analyze and Report**
- D. Define and Predict

Answer: C

NEW QUESTION # 81

An analysis of an organization's security posture determined that a particular asset is at risk and a new process or solution should be implemented to protect it. Typically, who would be in charge of implementing the new process or solution that was selected?

- **A. Security Engineer**
- B. SOC Manager
- C. Security Architect
- D. Security Analyst

Answer: A

NEW QUESTION # 82

Which of the following is a best practice for searching in Splunk?

- A. Searching over All Time ensures that all relevant data is returned.
- **B. Limit fields returned from the search utilizing the cable command.**
- C. Raw word searches should contain multiple wildcards to ensure all edge cases are covered.
- D. Streaming commands run before aggregating commands in the Search pipeline.

Answer: B

NEW QUESTION # 83

During their shift, an analyst receives an alert about an executable being run from C:\Windows\Temp. Why should this be investigated further?

- A. Temp directories contain the system page file and the virtual memory file, meaning the attacker can use their malware to read the in memory values of running programs.
- B. Temp directories are flagged as non-executable, meaning that no files stored within can be executed, and this executable was run from that directory.
- **C. Temp directories are world writable thus allowing attackers a place to drop, stage, and execute malware on a system without needing to worry about file permissions.**
- D. Temp directories aren't owned by any particular user, making it difficult to track the process owner when files are executed.

Answer: C

NEW QUESTION # 84
