

Free PDF Quiz Oracle - 1z0-1075-25 - The Best Oracle Manufacturing Cloud 2025 Implementation Professional Practical Information

Oracle 1Z0-1075-25 Oracle Manufacturing Cloud 2025 Implementation Professional QUESTION & ANSWERS

Visit Now: <https://www.dumps-certify.com>

What's more, part of that ExamDumpsVCE 1z0-1075-25 dumps now are free: <https://drive.google.com/open?id=1lh1KO3YXcciqbrsY9IDbo9Mypn-YDkvR>

Many people may worry that the 1z0-1075-25 guide torrent is not enough for them to practice and the update is slowly. We guarantee you that our experts check whether the 1z0-1075-25 study materials is updated or not every day and if there is the update the system will send the update to the client automatically. So you have no the necessity to worry that you don't have latest 1z0-1075-25 Exam Torrent to practice. We provide the best service to you and hope you are satisfied with our product and our service.

If you are preparing for the exam in order to get the related 1z0-1075-25 certification, here comes a piece of good news for you. The 1z0-1075-25 guide torrent is compiled by our company now has been praised as the secret weapon for candidates who want to pass the 1z0-1075-25 Exam as well as getting the related certification, so you are so lucky to click into this website where you can get your secret weapon. Our reputation for compiling the best 1z0-1075-25 training materials has created a sound base for our future business.

Latest 1z0-1075-25 Quiz Prep Aim at Assisting You to Pass the 1z0-1075-25 Exam - ExamDumpsVCE

Through many people complain that it is hard for searching a job. But If you get an excellent certification (with 1z0-1075-25 new test collection materials), you may be took as a skilled engineer. There is increasing demand for all kinds of senior R & D engineer in each link of internet, website, soft, App. Oracle 1z0-1075-25 new test collection materials will be a stepping-stone to success; you will have a good job with good prospects for development.

Oracle Manufacturing Cloud 2025 Implementation Professional Sample Questions (Q19-Q24):

NEW QUESTION # 19

A Production Operator is executing a work order at your plant. After completing move transactions, they notice that they have performed some incorrect move operations, including incorrect scrap and reject transactions. They must perform a reverse transaction to correct the errors. The operations are not count point-enabled and not auto-charged. Which four transactions are required to correct this situation?

- A. Reverse the product at the last operation.
- **B. Reverse material issued to a work order.**
- C. Reverse resources charged to a work order.
- **D. Reverse at an operation.**
- **E. Reverse from Reject to Ready.**
- **F. Reverse from Scrap to Ready.**

Answer: B,D,E,F

Explanation:

When correcting incorrect move operations such as scrap and reject transactions, and the operations are not count point-enabled and not auto-charged, multiple reverse transactions are required:

* Reverse material issued to a work order : This is required to correct any incorrect material that was issued to the work order initially.

* Reverse at an operation : This transaction allows the production operator to reverse an incorrect operation move to return the product to the previous step.

* Reverse from Scrap to Ready : If the operator incorrectly marked an item as scrap, this transaction moves it back to a ready state for further processing.

* Reverse from Reject to Ready : This transaction is used to reverse any items incorrectly marked as rejected back to a ready status.

Incorrect options:

* Reverse the product at the last operation (E) and Reverse resources charged to a work order (F) are not necessary since the operations are not count point-enabled and not auto-charged.

Oracle Cloud documentation on Move and Reverse Transactions explains how to correct incorrect operations, including reversing material issues, scrap, and reject transactions.

NEW QUESTION # 20

Your customer is a light assembly manufacturing company that doesn't require shop floor control. A Manufacturing Engineer wants to generate a work definition automatically for some items, and wants to eliminate the explicit maintenance of work definitions. Which three steps must they perform and verify in the Work Definition area?

- **A. Select a standard operation to be used in automatic work definition by enabling the Default attribute for automatic work definition.**
- **B. Ensure the predefined work definition name ORA_MAIN is active.**
- C. Ensure there is only one default standard operation at any point in time.
- D. Ensure the item is a standard item with a secondary item structure.
- **E. Select a resource to be used in automatic work definition by enabling the Default attribute for automatic work definition.**

Answer: A,B,E

Explanation:

In light assembly manufacturing environments where shop floor control is not required, a Manufacturing Engineer can automate the creation of work definitions to streamline production processes. The following steps must be performed and verified:

* Select a resource to be used in automatic work definition by enabling the Default attribute. This ensures that the system can automatically assign resources to the work definition without manual intervention.

* Ensure the predefined work definition name ORA_MAIN is active, as this serves as the template for automatically generating

work definitions in the system.

* Select a standard operation for use in automatic work definition, also by enabling the Default attribute. This ensures that the system knows which operations to include in the work definitions.

Incorrect steps:

* C : Secondary item structure is not relevant for automatic work definitions.

* D : There can be multiple default operations, so it's not necessary to limit it to one.

Oracle Cloud SCM documentation on "Automatic Work Definitions" explains the steps and settings required for light assembly manufacturing environments.

NEW QUESTION # 21

The pick release of a project work order creates movement requests with the project and the task from the work order.

Which statement is NOT true about this?

- A. The expenditure type and the expenditure organization from the work order are referenced onto the shop floor movement requests.
- **B. The expenditure type and the expenditure organization from the work order are not referenced onto the shop floor movement requests.**
- C. The expenditure type, expenditure date, and expenditure organization are derived when the work-in- process material issue or work-in-process material pick transactions are interfaced to Costing.
- D. The expenditure type for the item is derived based on the Default Expenditure Type attribute in Inventory Management. The picks for the work order are grouped by project costing, project, and task using pick slip grouping rules.

Answer: B

Explanation:

When pick release creates movement requests for project-based work orders, there are several key points regarding expenditure information:

* Statement D : The expenditure type and the expenditure organization from the work order are not referenced onto the shop floor movement requests - This statement is correct because the expenditure type and organization are not typically included in the shop floor movement requests. These requests focus more on the material movement aspects, while expenditure details are managed elsewhere in the system.

Oracle Cost Management documentation clarifies that shop floor movement requests handle inventory and material flow, and expenditure information is derived later in the process, not directly tied to these requests.

Incorrect Statements:

Statement A : The expenditure type, date, and organization are derived when interfacing with Costing, which ensures that project-related costs are tracked accurately.

Statement B : The expenditure type for the item is derived based on the default expenditure type in Inventory Management, which is true for how items are picked for a work order.

Statement C : Expenditure type and organization from the work order are referenced in costing, but not directly on movement requests.

NEW QUESTION # 22

You create a work order, in which some of the operations have components with the Push supply type. While reporting material consumption on the Report Material Transaction page, you want the Push components to default whenever the operator selects Show Components.

Which setup task must you perform in the Manage Plant Parameters section to achieve this?

- **A. Set Default Transaction Mode to Work Definition.**
- B. Set Default Transaction Mode to Entered.
- C. Set Default Transaction Mode to Entered and Default Transaction Quantity to Work Definition.
- D. Set Default Transaction Mode to ALL

Answer: A

Explanation:

To ensure that Push components are automatically defaulted when reporting material consumption on the Report Material Transaction page, you must configure the system to use the Work Definition as the default source for transactions.

* Setting Default Transaction Mode to Work Definition ensures that the system automatically pulls the component list and quantities as defined in the work order or work definition when operators perform material transactions. This setting streamlines the material

consumption process for Push supply type components.

Oracle Manufacturing Cloud 's " Plant Parameters " configuration guide explains how to set the Default Transaction Mode to manage material transactions efficiently, particularly when dealing with Push components.

NEW QUESTION # 23

Which three types of item quantities are displayed on the Work Order History tab?

- A. Completed
- B. Remaining
- C. Scrapped
- D. In Process
- E. Total

Answer: A,C,D

Explanation:

The Work Order History tab in Oracle Manufacturing Cloud provides a summary of different item quantities related to the lifecycle of a work order. The following quantities are displayed:

* In Process : This shows the quantity of items currently being processed in the production cycle.

* Scrapped : This quantity reflects the number of items that have been discarded due to defects or other issues during the production process.

* Completed : This quantity shows the number of items that have successfully been completed in the work order.

Incorrect options:

* Remaining : The system does not specifically display a " Remaining " quantity on the Work Order History tab.

* Total : The total quantity is not shown as a standalone metric in the Work Order History tab but is implied by other metrics.

Oracle Manufacturing Cloud documentation on work order management outlines the key item quantities that are tracked during the production process.

NEW QUESTION # 24

.....

A lot of progress is being made in the Oracle sector today. Many companies offer job opportunities to qualified candidates, but they have specific 1z0-1075-25 certification criteria to select qualified candidates. Thus, they can filter out effective and qualified candidates from the population. Oracle Manufacturing Cloud 2025 Implementation Professional (1z0-1075-25) must be taken and passed to become a certified individual.
