Many candidates find the IAPP AIGP exam preparation difficult. They often buy expensive study courses to start their IAPP AIGP certification exam preparation. However, spending a huge amount on such resources is difficult for many IAPP Certified Artificial Intelligence Governance Professional exam applicants. The latest IAPP AIGP Exam Dumps are the right option for you to prepare for the IAPP AIGP certification test at home.

IAPP AIGP Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Understanding How to Govern AI Development: This section of the exam measures the skills of AI project managers and covers the governance responsibilities involved in designing, building, training, testing, and maintaining AI models. It emphasizes defining the business context, performing impact assessments, applying relevant laws and best practices, and managing risks during model development. The domain also includes establishing data governance for training and testing, ensuring data quality and provenance, and documenting processes for compliance. Additionally, it focuses on preparing models for release, continuous monitoring, maintenance, incident management, and transparent disclosures to stakeholders.
Topic 2	<ul style="list-style-type: none"> Understanding How Laws, Standards, and Frameworks Apply to AI: This section of the exam measures skills of compliance officers and covers the application of existing and emerging legal requirements to AI systems. It explores how data privacy laws, intellectual property, non-discrimination, consumer protection, and product liability laws impact AI. The domain also examines the main elements of the EU AI Act, such as risk classification and requirements for different AI risk levels, as well as enforcement mechanisms. Furthermore, it addresses the key industry standards and frameworks, including OECD principles, NIST AI Risk Management Framework, and ISO AI standards, guiding organizations in trustworthy and compliant AI implementation.
Topic 3	<ul style="list-style-type: none"> Understanding the Foundations of AI Governance: This section of the exam measures skills of AI governance professionals and covers the core concepts of AI governance, including what AI is, why governance is needed, and the risks and unique characteristics associated with AI. It also addresses the establishment and communication of organizational expectations for AI governance, such as defining roles, fostering cross-functional collaboration, and delivering training on AI strategies. Additionally, it focuses on developing policies and procedures that ensure oversight and accountability throughout the AI lifecycle, including managing third-party risks and updating privacy and security practices.

Topic 4	<ul style="list-style-type: none"> • Understanding How to Govern AI Deployment and Use: This section of the exam measures skills of technology deployment leads and covers the responsibilities associated with selecting, deploying, and using AI models in a responsible manner. It includes evaluating key factors and risks before deployment, understanding different model types and deployment options, and ensuring ongoing monitoring and maintenance. The domain applies to both proprietary and third-party AI models, emphasizing the importance of transparency, ethical considerations, and continuous oversight throughout the model's operational life.

Updated Dumps AIGP Cost | AIGP 100% Free Free Practice Exams

Fast2test's pledge to customers is that we can help customers 100% pass their IT certification exams. The quality of Fast2test's product has been recognized by many IT experts. The most important characteristic of our products is their pertinence. It only takes 20 hours for you to complete the training course and then easily pass your first time to attend IAPP Certification AIGP Exam. You will not regret to choose Fast2test, because choosing it represents the success.

IAPP Certified Artificial Intelligence Governance Professional Sample Questions (Q63-Q68):

NEW QUESTION # 63

CASE STUDY

Please use the following to answer the next question:

A local police department in the United States procured an AI system to monitor and analyze social media feeds, online marketplaces and other sources of public information to detect evidence of illegal activities (e.g., sale of drugs or stolen goods). The AI system works by surveying the public sites in order to identify individuals that are likely to have committed a crime.

It cross-references the individuals against data maintained by law enforcement and then assigns a percentage score of the likelihood of criminal activity based on certain factors like previous criminal history, location, time, race and gender.

The police department retained a third-party consultant to assist in the procurement process, specifically to evaluate two finalists.

Each of the vendors provided information about their system's accuracy rates, the diversity of their training data and how their system works. The consultant determined that the first vendor's system has a higher accuracy rate and based on this information, recommended this vendor to the police department.

The police department chose the first vendor and implemented its AI system. As part of the implementation, the department and consultant created a usage policy for the system, which includes training police officers on how the system works and how to incorporate it into their investigation process.

The police department has now been using the AI system for a year. An internal review has found that every time the system scored a likelihood of criminal activity at or above 90%, the police investigation subsequently confirmed that the individual had, in fact, committed a crime. Based on these results, the police department wants to forego investigations for cases where the AI system gives a score of at least 90% and proceed directly with an arrest.

During the procurement process, what is the most likely reason that the third-party consultant asked each vendor for information about the diversity of their datasets?

- A. To comply with applicable law.
- B. To evaluate the reliability of the AI system.
- C. To determine the explainability of the AI system.
- **D. To assess the fairness of the AI system.**

Answer: D

Explanation:

Requesting information about dataset diversity helps assess whether the AI system treats different demographic groups fairly, mitigating bias and discrimination risks.

NEW QUESTION # 64

During the development of semi-autonomous vehicles, various failures occurred as a result of the sensors misinterpreting environmental surroundings, such as sunlight.

These failures are an example of?

- A. Hallucination.
- B. Uncertainty.
- C. Forgetting.
- **D. Brittleness.**

Answer: D

Explanation:

The failures in semi-autonomous vehicles due to sensors misinterpreting environmental surroundings, such as sunlight, are examples of brittleness. Brittleness in AI systems refers to their inability to handle variations in input data or unexpected conditions, leading to failures when the system encounters situations that were not adequately covered during training. These systems perform well under specific conditions but fail when those conditions change. Reference: AIGP Body of Knowledge on AI System Robustness and Failures.

NEW QUESTION # 65

A bank is aiming to comply with ISO/IEC 42005:2025, and is studying how to adopt the standard in light of a new AI customer service system that it would like to implement.

In addition to the risk management process the bank already has in place to assess the risks of any potential new systems, which of the following actions is the most effective in adopting the ISO/IEC 42005:2025 standard?

- A. Defining a standalone AI impact assessment procedure to supplement the existing risk management process.
- B. Instructing AI developers to perform an AI impact assessment before development in addition to the existing risk management process.
- C. Collecting information on the AI system's performance to document additional AI risks.
- **D. Adding AI risks to the risk register and continuing to leverage the existing risk management process.**

Answer: D

Explanation:

The correct answer is B because ISO/IEC 42005 emphasizes integrating AI risk management into existing enterprise risk management frameworks rather than creating siloed or duplicative processes. Effective AI governance requires embedding AI-specific risks into established governance structures such as risk registers, controls, and monitoring systems. This ensures consistency, scalability, and alignment with organizational risk practices. Options C and D introduce parallel or fragmented processes, which contradict the principle of integrated governance and may create inefficiencies or gaps. Option A focuses only on data collection and does not address governance integration. The AI Governance in Practice Report highlights that organizations should incorporate AI risks into broader enterprise risk management and maintain unified risk registers to ensure visibility, accountability, and coordinated mitigation across the organization.

NEW QUESTION # 66

Which of the following AI uses is best described as human-centric?

- A. Machine learning is used for demand forecasting and inventory management, ensuring that consumers can find products they want when they want them.
- **B. Virtual assistants are used to adapt educational content and teaching methods to individuals, offering personalized recommendations based on ability and needs.**
- C. Pattern recognition algorithms are used to improve the accuracy of weather predictions, which benefits many industries and everyday life.
- D. Autonomous robots are used to move products within a warehouse, allowing human workers to reduce physical strain and alleviate monotony.

Answer: B

Explanation:

Virtual assistants that personalize education based on individual abilities and needs focus directly on enhancing human learning experiences, making this use human-centric.
