質問 # 18

When you are setting up two FortiAuthenticator devices in active-passive HA, which HA role must you select on the primary FortiAuthenticator?

- A. Standalone primary
- B. Load balancing primary
- C. Active-passive primary
- **D. Cluster member**

正解: D

質問 # 19

You are the administrator of a large network that includes a large local user database on the current Fortiauthenticator. You want

to import all the local users into a new Fortiauthenticator device.
Which method should you use to migrate the local users?

- A. Import users from RADUIS.
- **B. Import users using a CSV file.**
- C. Import users using RADIUS accounting updates.
- D. Import the current directory structure.

正解: B

質問 # 20

When a local root CA is created on FortiAuthenticator, the option to export the key and certificate is not available, however the option to export the certificate is.
Why is this the case?

- **A. There should never be a need to export the private key.**
- B. A private key is not generated for a local root certificate.
- C. For security reasons, a local root certificate includes OSCP responder information for automatic key retrieval.
- D. The certificate includes the private key for a local root certificate.

正解: A

解説:

For security reasons, FortiAuthenticator does not allow exporting the private key of a local root CA, as the root private key must remain protected to maintain the integrity and trust of the entire PKI hierarchy.

質問 # 21

Which two statements about asymmetric cryptography are true? (Choose two.)

- **A. The public key can be openly distributed**
- B. It distributes key pairs to both the client and the server
- **C. It uses a mathematically linked public and private key pair**
- D. Private keys are distributed in the server's digital certificates

正解: A、C

解説:

In asymmetric cryptography, the public key can be openly shared without compromising security.
It relies on a mathematically linked public and private key pair, where one key encrypts and the other decrypts.

質問 # 22
