Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample Questions (Q198-Q203):

NEW QUESTION # 198

A user has launched one EC2 instance in the US West region. The user wants to access the RDS instance launched in the US East region from that EC2 instance. How can the user configure the access for that EC2 instance?

- A. Create an IAM role which has access to RDS and launch an instance in the US West region with it
- B. It is not possible to access RDS of the US East region from the US West region
- **C. Configure the IP range of the US West region instance as the ingress security rule of RDS**
- D. Open the security group of the US West region in the RDS security group's ingress rule

Answer: C

Explanation:

The user cannot authorize an Amazon EC2 security group if it is in a different AWS Region than the RDS DB instance. The user can authorize an IP range or specify an Amazon EC2 security group in the same region that refers to an IP address in another region.

NEW QUESTION # 199

How long can you keep your Amazon SQS messages in Amazon SQS queues?

- A. From 120 secs up to 4 weeks
- **B. From 60 secs up to 2 weeks**
- C. From 30 secs up to 1 week
- D. From 10 secs up to 7 days

Answer: B

Explanation:

The SQS message retention period is configurable and can be set anywhere from 1 minute to 2 weeks. The default is 4 days and once the message retention limit is reached your messages will be automatically deleted. The option for longer message retention provides greater flexibility to allow for longer intervals between message production and consumption.

NEW QUESTION # 200

A user is planning to use the AWS RDS with MySQL. Which of the below mentioned services the user is not going to pay?

- A. Data transfer
- B. I/O requests per month
- C. Data storage
- **D. RDS Cloudwatch metrics**

Answer: D

Explanation:

RDS charges the user on a pay as you go basis. It charges the user based on the instance type, number of hours that the instance is running, data transfer, storage cost as well for the I/O requests. The monitoring is free of cost.

NEW QUESTION # 201

An organization has hosted an application on the EC2 instances. There will be multiple users connecting to the instance for setup and configuration of application. The organization is planning to implement certain security best practices. Which of the below mentioned pointers will not help the organization achieve better security arrangement?

- A. Disable the password based login for all the users. All the users should use their own keys to connect with the instance securely.
- **B. Allow only IAM users to connect with the EC2 instances with their own secret access key.**
- C. Create a procedure to revoke the access rights of the individual user when they are not required to connect to EC2 instance anymore for the purpose of application configuration.
- D. Apply the latest patch of OS and always keep it updated.

Answer: B

Explanation:

Since AWS is a public cloud any application hosted on EC2 is prone to hacker attacks. It becomes extremely important for a user

to setup a proper security mechanism on the EC2 instances. A few of the security measures are listed below:

Always keep the OS updated with the latest patch

Always create separate users within OS if they need to connect with the EC2 instances, create their keys and disable their password. Create a procedure using which the admin can revoke the access of the user when the business work on the EC2 instance is completed. Lock down unnecessary ports. Audit any proprietary applications that the user may be running on the EC2 instance. Provide temporary escalated privileges, such as sudo for users who need to perform occasional privileged tasks. The IAM is useful when users are required to work with AWS resources and actions, such as launching an instance. It is not useful to connect (RDP / SSH) with an instance.
