

CompTIA N10-009 Reliable Practice Questions - Valid Braindumps N10-009 Ebook

BONUS!!! Download part of Pass4SureQuiz N10-009 dumps for free: <https://drive.google.com/open?id=1Kr9OzM3MD5ymdAg4uiFnaRkxP5Y39Gec>

We can offer further help related with our N10-009 study engine which win us high admiration. By devoting in this area so many years, we are omnipotent to solve the problems about the N10-009 practice questions with stalwart confidence. Providing services 24/7 with patient and enthusiastic staff, they are willing to make your process more convenient. So, if I can be of any help to you in the future, please feel free to contact us at any time on our N10-009 Exam Braindumps.

CompTIA N10-009 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Networking Concepts: For network administrators and IT support professionals, this domain covers
Topic 2	<ul style="list-style-type: none">Cloud concepts and connectivity options, and Common networking ports.
Topic 3	<ul style="list-style-type: none">Network Implementation: For network technicians and junior network engineers, this section covers Characteristics of routing technologies, Configuration of switching technologies and features, and

Topic 4	<ul style="list-style-type: none">• Network Operations: For IT operations staff and network operations center (NOC) technicians, this part of the exam covers the purpose of organizational processes and procedures and use of network monitoring technologies.

Valid Braindumps CompTIA N10-009 Ebook | N10-009 New Study Materials

Our company is considerably cautious in the selection of talent and always hires employees with store of specialized knowledge and skills on our N10-009 exam questions. All the members of our experts and working staff maintain a high sense of responsibility, which is why there are so many people choose our N10-009 Exam Materials and to be our long-term partner. For we carry forward the spirit of "firm & indomitable, developing & innovative, achieving the first class", serving customers with all our heart and soul with our wonderful N10-009 practice braindumps.

CompTIA Network+ Certification Exam Sample Questions (Q485-Q490):

NEW QUESTION # 485

An IT manager needs to connect ten sites in a mesh network. Each needs to be secured with reduced provisioning time. Which of the following technologies will best meet this requirement?

- A. VPN
- **B. SD-WAN**
- C. VXLAN
- D. NFV

Answer: B

Explanation:

Definition of SD-WAN:

Software-Defined Wide Area Network (SD-WAN) is a technology that simplifies the management and operation of a WAN by decoupling the networking hardware from its control mechanism. It allows for centralized management and enhanced security.

Benefits of SD-WAN:

Reduced Provisioning Time: SD-WAN enables quick and easy deployment of new sites with centralized control and automation.

Security: Incorporates advanced security features such as encryption, secure tunneling, and integrated firewalls.

Scalability: Easily scales to accommodate additional sites and bandwidth requirements.

Comparison with Other Technologies:

VXLAN (Virtual Extensible LAN): Primarily used for network virtualization within data centers.

VPN (Virtual Private Network): Provides secure connections but does not offer the centralized management and provisioning efficiency of SD-WAN.

NFV (Network Functions Virtualization): Virtualizes network services but does not specifically address WAN management and provisioning.

Implementation:

SD-WAN solutions are implemented by deploying edge devices at each site and connecting them to a central controller. This allows for dynamic routing, traffic management, and security policy enforcement.

NEW QUESTION # 486

A network administrator is responding to a request to configure a new IP phone. Which of the following should the network administrator do to allow data and voice traffic to be properly prioritized?

- A. Enable 802.1Q tagging.
- B. Change the native VLAN.
- C. Configure full duplex.
- **D. Modify QoS.**

Answer: D

Explanation:

To ensure voice and data traffic are properly prioritized for an IP phone, the administrator should modify (configure) QoS. In Network+ (N10-009), QoS is the primary mechanism used to prioritize latency-sensitive traffic such as VoIP. By classifying and marking voice frames/packets (often using DSCP/CoS values) and applying priority queuing, the network ensures voice traffic experiences minimal delay and jitter even when links are congested. This is essential for call quality because voice is highly sensitive to variation in delivery time and packet loss.

802.1Q tagging is important for VLAN separation (and many IP phone deployments use a voice VLAN), but VLAN tagging alone does not guarantee prioritization; it separates traffic, while QoS provides preferential treatment. Full duplex can reduce collisions on Ethernet links, but it does not implement traffic prioritization policies. Changing the native VLAN is a trunking/security configuration detail and not the correct action to prioritize voice versus data. In practice, networks often use both a voice VLAN (802.1Q) and QoS, but for the explicit requirement of prioritization, QoS is the correct answer.

NEW QUESTION # 487

A network administrator needs to set up a multicast network for audio and video broadcasting. Which of the following networks would be the most appropriate for this application?

- A. 172.16.0.0/24
- B. 240.0.0.0/24
- C. 192.168.0.0/24
- **D. 224.0.0.0/24**

Answer: D

Explanation:

The address range 224.0.0.0/24 falls within the Class D IP address range (224.0.0.0 to 239.255.255.255), which is reserved for multicast traffic. Multicast addresses are used for the delivery of information to multiple destinations simultaneously, making them ideal for applications like audio and video broadcasting. The other options (172.16.0.0/24, 192.168.0.0/24, and 240.0.0.0/24) are not suitable for multicast as they are within different IP ranges used for other purposes (private addressing and future use, respectively).

NEW QUESTION # 488

A company is upgrading its wireless network. Currently, each AP broadcasts a wireless LAN name depending on the location in the building. Which of the following configurations allows a single wireless LAN name to be broadcast across the entire building?

- **A. ESSID**
- B. Wireless mesh
- C. Band steering
- D. WPA3

Answer: A

Explanation:

The correct answer is A. ESSID. An ESSID (Extended Service Set Identifier) is used when multiple wireless access points are configured to present the same wireless network name (SSID) across a larger coverage area, such as an entire building or campus floor. This allows users to move from one location to another while remaining connected to what appears to be a single wireless network. In practice, this supports seamless roaming between APs when they are properly configured with the same SSID, compatible security settings, and coordinated channel planning.

The other options do not fit the requirement. Wireless mesh is a topology that allows APs to connect to one another wirelessly, but it does not by itself describe using one common WLAN name across all APs. Band steering pushes dual-band clients toward the 5 GHz or 6 GHz band for better performance; it is not about creating one building-wide WLAN name. WPA3 is a wireless security standard and relates to encryption and authentication, not SSID design.

The key phrase in the question is "a single wireless LAN name across the entire building", which points directly to an ESSID deployment.

NEW QUESTION # 489

Which of the following panels would be best to facilitate a central termination point for all network cables on the floor of a company building?

- A. Patch
- B. MDF
- C. Rack
- D. UPS

Answer: A

Explanation:

Reference: CompTIA Network+ Certification Exam Objectives - Network Installation section.

NEW QUESTION # 490

.....

There are other countless advantages of the CompTIA Network+ Certification Exam N10-009 exam that you can avail of after passing the CompTIA Network+ Certification Exam exam. But keep in mind to pass the CompTIA Network+ Certification Exam N10-009 exam is a difficult job. You have to put in some extra effort, time, and investment then you will be confident to perform well in the final CompTIA Network+ Certification Exam exam. In this journey, you can get help from CompTIA Network+ Certification Exam N10-009 Dumps that will assist you in CompTIA Network+ Certification Exam exam preparation and prepare you to perform well in the final CompTIA Network+ Certification Exam exam.
