TCFP FIRE INSPECTOR II TEST WITH COMPLETE SOLUTION 2023-2024

How big are DOT labels? - 4-inch square, on point

Where is the primary DOT label? - On the left

How many hazards can be on a DOT label? - several.

NFPA 704 - Hazardous Materials Marking System

Placard: Blue means..... - Health Hazard

Placard: Red means..... - Flammability Hazard

Placard: Yellow means..... - Instability

Placard: White means..... - Special Hazards

5 Special Hazards - (1) Combustible Dust Fibres

(2) Spraying/painting dip tanks

(3) Compressed Gasses

(4) Welding and cutting

(5) Hazardous chemicals

Article 15 of NFPA 70 - National Electric Code, Divided into 3 classes.

Class I Locations - Flammable gases and vapours exist under normal conditions

Class I Division I Location - Ignitable conditions exist due to repairs or maintenance.

Class I Division II Location - Ignitable conditions produced or used but confined to closed containers or systems.

We have collected the frequent-tested knowledge into our Fire-Inspector-II practice materials for your reference according to our experts' years of diligent work. So our Fire-Inspector-II exam braindumps are triumph of their endeavor. By resorting to our Fire-Inspector-II practice dumps, we can absolutely reap more than you have imagined before. No only that you will pass your Fire-Inspector-II Exam for sure, according you will get the certificate, but also you will get more chances to have better jobs and higher salaries.

In the era of informational globalization, the world has witnessed climax of science and technology development, and has enjoyed the prosperity of various scientific blooms. In 21st century, every country had entered the period of talent competition, therefore, we must begin to extend our Fire-Inspector-II personal skills, only by this can we become the pioneer among our competitors. We here tell you that there is no need to worry about. Our Fire-Inspector-II Actual Questions are updated in a high speed. Since the date you pay successfully, you will enjoy the Fire-Inspector-II test guide freely for one year, which can save your time and money. We will send you the latest Fire-Inspector-II study dumps through your email, so please check your email then.

Free PDF Quiz 2026 International Code Council Fire-Inspector-II: 67 - Fire

Inspector II Exam Updated New Test Papers

VCE4Dumps is a website for International Code Council Certification Fire-Inspector-II Exam to provide a short-term effective training. International Code Council Fire-Inspector-II is a certification exam which is able to change your life. IT professionals who gain International Code Council Fire-Inspector-II authentication certificate must have a higher salary than the ones who do not have the certificate and their position rising space is also very big, who will have a widely career development prospects in the IT industry in.

International Code Council 67 - Fire Inspector II Exam Sample Questions (Q84-Q89):

NEW QUESTION # 84

A permit is required for storage of high-pile combustible stock in a building when the area of stock exceeds

- A. 1,000
- B. 0
- C. 2,500
- **D. 1**

Answer: D

Explanation:

High-Pile Combustible Storage Permit Requirements

According to the International Fire Code (IFC) 2021, Section 105.6.23, a permit is required for the storage of high-pile combustible stock when the storage area exceeds 2,500 square feet.

2. Definition of High-Pile Storage

High-pile storage is defined as storage of combustible materials on racks or piles exceeding 12 feet in height (or 6 feet for highly combustible materials, such as rubber and plastics).

IFC Table 3206.2 establishes fire protection requirements based on storage height, area, and commodity class.

3. Verification of Other Options

Option A (225 sq. ft.) - Incorrect, as this is far below the 2,500 sq. ft. permit threshold.

Option B (500 sq. ft.) - Incorrect, as the fire code does not require a permit at this level.

Option C (1,000 sq. ft.) - Incorrect, as the IFC specifies 2,500 sq. ft. as the threshold for requiring a permit.

Reference Sources:

International Fire Code (IFC) 2021 - Section 105.6.23 (High-Pile Combustible Storage Permit Requirements) IFC Chapter 32

(High-Piled Storage Regulations) ICC Fire Inspector II Study Guide (2021) Thus, the correct and verified answer is: D. 2,500. #

NEW QUESTION # 85

Clearance between tops of piles of combustible fibers and sprinkler heads shall not be less than ____ ft.

- A. 0
- B. 1
- **C. 2**
- D. 3

Answer: C

Explanation:

Reference to Fire Code Requirements for Clearance Between Combustible Fibers and Sprinklers:

The International Fire Code (IFC 2021), Section 3206.6, states that the minimum clearance between the tops of piles of combustible fibers and sprinkler deflectors shall be no less than 3 feet.

This requirement ensures that the sprinkler system operates efficiently and that water distribution is not obstructed in case of a fire.

Fire Safety Concerns:

Combustible fibers pose a high fire risk due to their flammability and tendency to generate large amounts of heat and smoke.

Adequate clearance prevents heat accumulation near the sprinkler heads, ensuring they activate at the correct temperature.

Clarification of Incorrect Answer Choices:

A: 2 ft. # Incorrect

Too low and could obstruct sprinkler operation, reducing water distribution effectiveness.

C: 4 ft. # Incorrect

Exceeds the required minimum per the IFC 3206.6 standard, though more clearance is beneficial.

D: 5 ft. # Incorrect

More than the code requirement, but the mandatory clearance is 3 feet.

Conclusion:

The correct and verified answer is B (3 feet) based on IFC 3206.6, ensuring proper sprinkler performance and fire safety for combustible fiber storage.

NEW QUESTION # 86

Multiple smoke alarms installed within individual guest rooms of a hotel must comply with which of the following requirements?

- A. Their batteries must be checked every six months.
- B. They must automatically sound a fire alarm throughout the hotel.
- C. They must initiate an automatic fire suppression or sprinkler system.
- D. They must be interconnected so that one alarm will activate all alarms within the guest rooms.

Answer: D

Explanation:

Smoke alarm requirements for individual guest rooms in hotels are specified in the 2021 International Fire Code (IFC) Section 907.2.11.3 and NFPA 72 (National Fire Alarm and Signaling Code).

IFC 907.2.11.3 - Smoke Alarms in Group R-1 Occupancies (Hotels and Motels):

Requires smoke alarms in sleeping areas to be interconnected so that when one alarm is activated, it will trigger all alarms within the guest room or suite.

This ensures that occupants in different areas of the same guest room are alerted simultaneously to fire hazards.

Why Other Options Are Incorrect?

A: Their batteries must be checked every six months.

The IFC and NFPA 72 require smoke alarm batteries to be checked, but they do not mandate a six-month inspection schedule.

B: They must automatically sound a fire alarm throughout the hotel.

Smoke alarms within an individual guest room do not have to activate the entire hotel's fire alarm system.

C: They must initiate an automatic fire suppression or sprinkler system.

Smoke alarms are designed for early detection and warning, not for activating fire suppression systems.

NEW QUESTION # 87

The clearance requirement from structures for open burning may be reduced to a minimum of ____ ft. from a structure when the burning is conducted in an approved container.

- A. 0
- B. 1
- C. 2
- D. 3

Answer: C

Explanation:

For open burning, fire codes typically require a minimum clearance from structures to prevent fire spread.

However, when burning is conducted in an approved container, the required clearance distance may be reduced to 15 feet.

Reference to Fire Inspector Documentation:

1. 2021 International Fire Code (IFC) - Section 307.4 (Open Burning, Recreational Fires, and Portable Outdoor Fireplaces) IFC 307.4 states that the minimum clearance for open burning is 50 feet but may be reduced to 15 feet when conducted in an approved container that prevents fire spread.

2. NFPA 1 - Fire Code (2021 Edition) - Section 10.11 (Open Burning and Recreational Fires) NFPA 1, Section 10.11.5 aligns with the IFC and allows a minimum of 15 feet clearance for contained burning in approved receptacles.

Detailed Explanation of Answer Choices:

Option A (Incorrect): 10 ft. is too close and does not meet the IFC minimum requirement.

Option B (Correct): 15 ft. is the minimum required distance for burning in an approved container according to IFC 307.4.

Option C (Incorrect): 25 ft. is the standard for recreational fires but not for approved containers.

Option D (Incorrect): 50 ft. applies to open burning without a container, not when using an approved container.

Thus, the correct and verified answer is: B. 15 ft.

NEW QUESTION # 88

Platforms used for access to aboveground tanks storing flammable or combustible liquids shall be:

- A. built of noncombustible construction.
- B. built of nonferrous, nonsparking metal.
- C. at least 4 ft. wide.
- D. located no closer than 3 ft. to the side of the tank.

Answer: A

Explanation:

Platforms used for access to aboveground tanks storing flammable or combustible liquids are regulated by 2021 IFC, Section 5704 - Storage of Flammable and Combustible Liquids.

IFC 5704.2.7.4 - Access to Aboveground Tanks:

"Platforms, ladders, and stairways providing access to aboveground tanks storing flammable or combustible liquids shall be of noncombustible construction." This ensures that in case of fire, the access structures do not contribute to the spread of flames.

Why Other Options Are Incorrect?

A: At least 4 ft. wide. - The IFC does not specify a required width for platforms.

C: Built of nonferrous, nonsparking metal. - While important in hazardous areas, this is not a general requirement for platforms accessing aboveground tanks.

D: Located no closer than 3 ft. to the side of the tank. - There is no specific 3-ft. clearance requirement in the IFC for platforms.

NEW QUESTION # 89

.....

Cease to struggle and you cease to live. Only by continuous learning can we not be surpassed by others. Many people do not like to study and think that learning is a very vexing thing. This kind of cognition makes their careers stagnate. Fire-Inspector-II test question will change your perception. Fire-Inspector-II learning dumps aim to help students learn easily and effectively that has been developed over many years by many industry experts. For the online version, unlike other materials that limit one person online, Fire-Inspector-II learning dumps does not limit the number of concurrent users and the number of online users. You can practice anytime, anywhere, practice repeatedly, practice with others, and even purchase together with others. Fire-Inspector-II learning dumps make every effort to help you save money and effort, so that you can pass the exam with the least cost.
