What's more, part of that ExamDiscuss CCDAK dumps now are free: <https://drive.google.com/open?id=1-rip6dBbW-MxMJel3EhReNqv-9nyno6D>

In the process of using the CCDAK study training materials, once users have any questions about our study materials, the user can directly by E-mail us, our products have a dedicated customer service staff to answer for the user, they are 24 hours service for you, we are very welcome to contact us by E-mail and put forward valuable opinion for us. Our CCDAK Latest Questions already have three different kinds of learning materials, what is the most suitable CCDAK test guide for you? You can just follow the instructions for CCDAK study guide on the web or ask our services about it.

The CCDAK certification exam is an online, proctored exam that consists of multiple-choice questions and hands-on exercises. CCDAK exam is designed to be challenging, but fair, and is intended to test the knowledge and skills of developers who have experience working with Kafka. CCDAK exam is available to anyone who meets the prerequisites, which include experience working with Kafka and a solid understanding of distributed systems and programming concepts. The CCDAK certification exam is an excellent way for developers to demonstrate their expertise in Kafka and differentiate themselves in a competitive job market.

The CCDAK certification is highly regarded by employers and industry professionals as a mark of excellence in Apache Kafka development. It is an excellent way for developers to demonstrate their knowledge and expertise in Apache Kafka and to differentiate themselves from their peers in a competitive job market. Additionally, being certified in Apache Kafka helps professionals to stay current with the latest trends and developments in the rapidly evolving world of big data and real-time streaming.

Before taking the Confluent CCDAK Exam, developers should have a good understanding of Kafka fundamentals, including topics, partitions, brokers, producers, consumers, and Kafka Connect. They should also be proficient in Java or Scala programming languages and have experience working with REST APIs and command-line interfaces. It is recommended that developers attend the Confluent Developer Training or have equivalent experience before taking the exam.

## CCDAK Latest Practice Torrent & CCDAK Free docs & CCDAK Exam Vce

Our CCDAK practice materials are suitable for exam candidates of different degrees, which are compatible whichever level of knowledge you are in this area. These CCDAK training materials win honor for our company, and we treat it as our utmost privilege to help you achieve your goal. As far as we know, our CCDAK Exam Prep have inspired millions of exam candidates to pursue their dreams and motivated them to learn more high-efficiently. Our CCDAK practice materials will not let your down.

## Confluent Certified Developer for Apache Kafka Certification Examination Sample Questions (Q186-Q191):

NEW QUESTION # 186

An application is consuming messages from Kafka. You observe partitions being frequently reassigned to the consumer group from the application logs.

Which factors may be contributing to this? (Choose 2.)

- A. The number of partitions is not matching the number of application instances.
- B. An instance of the application is crashing and getting restarted
- C. There is a storage issue on the broker.
- **D. There is a slow consumer processing application.**

**Answer: D**

#### NEW QUESTION # 187

Match the topic configuration setting with the reason the setting affects topic durability.

(You are given settings like `unclean.leader.election.enable=false`, `replication.factor`, `min.insync.replicas=2`)

<code>unclean.leader.election.enable=false</code>	<code>replication.factor</code>	<code>min.insync.replicas=2</code>
<input type="text"/>	Sets the standard for the number of partition instances that must keep up with the latest committed message.	
<input type="text"/>	Specifies how many redundant copies of partitions are distributed across brokers.	
<input type="text"/>	Prevents data loss by only considering in-sync replicas when rebalancing.	

**Answer:**

Explanation:

<code>unclean.leader.election.enable=false</code>	<code>replication.factor</code>	<code>min.insync.replicas=2</code>
<code>min.insync.replicas=2</code>	Sets the standard for the number of partition instances that must keep up with the latest committed message.	
<code>replication.factor</code>	Specifies how many redundant copies of partitions are distributed across brokers.	
<code>unclean.leader.election.enable=false</code>	Prevents data loss by only considering in-sync replicas when rebalancing.	

\* `unclean.leader.election.enable=false`# Prevents data loss by only considering in-sync replicas when rebalancing.

\* `replication.factor`# Specifies how many redundant copies of partitions are distributed across brokers.

\* `min.insync.replicas=2`# Sets the standard for the number of partition instances that must keep up with the latest committed message.

\* `unclean.leader.election.enable=false` ensures that only in-sync replicas can be elected as leaders. If disabled, an out-of-sync replica may become leader, potentially leading to data loss.

\* `replication.factor` defines how many brokers will maintain copies of each partition, directly impacting durability and availability.

\* `min.insync.replicas` determines how many replicas must acknowledge a write when `acks=all` is used, enforcing write durability.

Reference: Apache Kafka Topic Configuration Documentation

#### NEW QUESTION # 188

We have a store selling shoes. What dataset is a great candidate to be modeled as a KTable in Kafka Streams?

- **A. Money made until now**
- B. The transaction stream
- **C. Items returned**
- D. Inventory contents right now

**Answer: A,C**

Explanation:

Aggregations of stream are stored in table, whereas Streams must be modeled as a KStream to avoid data explosion

### NEW QUESTION # 189

Which actions will trigger partition rebalance for a consumer group? (select three)

- A. Increase partitions of a topic
- B. Add a new consumer to consumer group
- C. Add a broker to the cluster
- D. A consumer in a consumer group shuts down
- E. Remove a broker from the cluster

**Answer: A,B,D**

Explanation:

Rebalance occurs when a new consumer is added, removed or consumer dies or partitions increased.

### NEW QUESTION # 190

You need to configure a sink connector to write records that fail into a dead letter queue topic.

Requirements:

\* Topic name: DLQ-Topic

\* Headers containing error context must be added to the messages Which three configuration parameters are necessary?(Select three.)

- A. errors.deadletterqueue.topic.name=DLQ-Topic
- B. errors.deadletterqueue.context.headers.enable=true
- C. errors.tolerance=all
- D. errors.tolerance=none
- E. errors.log.enable=true
- F. errors.log.include.messages=true

**Answer: A,B,C**

Explanation:

To send failed records to a dead letter queue (DLQ), you must configure:

\* errors.tolerance=all: Tells the connector to not fail on errors but handle them (e.g., send to DLQ).

\* errors.deadletterqueue.topic.name=DLQ-Topic: Specifies the DLQ topic.

\* errors.deadletterqueue.context.headers.enable=true: Includes error context in message headers.

From Kafka Connect Error Handling Docs:

"Kafka Connect supports directing problematic records to a separate topic (DLQ) using errors.\* configs.

Headers can include failure metadata."

Options D, E, F are related to logging, not DLQ behavior.

Reference: Kafka Connect Configurations > Error Handling

### NEW QUESTION # 191

.....

Confluent CCDAK can ensure your success. So here comes Confluent, who provides you with the Confluent CCDAK exam dumps to get your dream Confluent CCDAK certification with no hassle. Confluent CCDAK Certification will add up to your excellence in your field and leave no space for any doubts in the mind of the hiring team.
