Free CIPT Practice Exams | CIPT Valid Test Pattern

If you have interests with our CIPT practice materials, we prefer to tell that we have contacted with many former buyers of our CIPT exam questions and they all talked about the importance of effective CIPT practice material playing a crucial role in your preparation process. Our CIPT practice materials keep exam candidates motivated and efficient with useful content based wholly on the real CIPT guide materials. There are totally three versions of CIPT practice materials which are the most suitable versions for you: pdf, software and app versions.

IAPP Certified Information Privacy Technologist (CIPT) Sample Questions (Q175-Q180):

NEW QUESTION # 175

What is the best way to protect privacy on a geographic information system?

- A. Using a wireless encryption protocol.
- B. Limiting the data provided to the system.

- C. Using a firewall.
- D. Scrambling location information.

Answer: C

NEW QUESTION # 176

Not updating software for a system that processes human resources data with the latest security patches may create what?

- A. Privacy vulnerabilities.
- B. Reportable privacy violations.
- C. Authentication issues.
- D. Privacy threat vectors.

Answer: A

NEW QUESTION # 177

SCENARIO

Wesley Energy has finally made its move, acquiring the venerable oil and gas exploration firm Lancelot from its long-time owner David Wilson. As a member of the transition team, you have come to realize that Wilson's quirky nature affected even Lancelot's data practices, which are maddeningly inconsistent. "The old man hired and fired IT people like he was changing his necktie," one of Wilson's seasoned lieutenants tells you, as you identify the traces of initiatives left half complete.

For instance, while some proprietary data and personal information on clients and employees is encrypted, other sensitive information, including health information from surveillance testing of employees for toxic exposures, remains unencrypted, particularly when included within longer records with less-sensitive data. You also find that data is scattered across applications, servers and facilities in a manner that at first glance seems almost random.

Among your preliminary findings of the condition of data at Lancelot are the following:

* Cloud technology is supplied by vendors around the world, including firms that you have not heard of. You are told by a former Lancelot employee that these vendors operate with divergent security requirements and protocols.

* The company's proprietary recovery process for shale oil is stored on servers among a variety of less-sensitive information that can be accessed not only by scientists, but by personnel of all types at most company locations.

* DES is the strongest encryption algorithm currently used for any file.

* Several company facilities lack physical security controls, beyond visitor check-in, which familiar vendors often bypass.

* Fixing all of this will take work, but first you need to grasp the scope of the mess and formulate a plan of action to address it.

Which is true regarding the type of encryption Lancelot uses?

- A. It uses a single key for encryption and decryption.
- B. Its decryption key is derived from its encryption key.
- C. It is a data masking methodology.
- D. It employs the data scrambling technique known as obfuscation.

Answer: D

Explanation:

NEW QUESTION # 178

When releasing aggregates, what must be performed to magnitude data to ensure privacy?

- A. Basic rounding.
- B. Value swapping.
- C. Top coding.
- D. Noise addition.

Answer: D

Explanation:

To ensure privacy when releasing aggregated data, adding noise to the data is a common and effective technique. Noise addition involves introducing random data to the dataset, which helps to obscure individual entries and prevent re-identification. This method

maintains the utility of the dataset while protecting the privacy of individuals whose data is included.

NEW QUESTION # 179

Between November 30th and December 2nd, 2013, cybercriminals successfully infected the credit card payment systems and bypassed security controls of a United States-based retailer with malware that exfiltrated 40 million credit card numbers. Six months prior, the retailer had malware detection software installed to prevent against such an attack.

Which of the following would best explain why the retailer's consumer data was still exfiltrated?

- A. The IT systems and security measures utilized by the retailer's third-party vendors were in compliance with industry standards, but their credentials were stolen by black hat hackers who then entered the retailer's system.
- B. The U.S Department of Justice informed the retailer of the security breach on Dec. 12th, but the retailer took three days to confirm the breach and eradicate the malware.
- C. The detection software alerted the retailer's security operations center per protocol, but the information security personnel failed to act upon the alerts.
- D. The retailer's network that transferred personal data and customer payments was separate from the rest of the corporate network, but the malware code was disguised with the name of software that is supposed to protect this information.

Answer: C

Explanation:

* Option A: This option explains that the detection software worked as intended and alerted the security team, but the failure occurred due to human error - the security personnel did not act on the alerts. This is a common issue where the technology functions correctly, but the human response is lacking.

* Option B: This explains a delay in action post-notification from the Department of Justice, but it doesn't fully account for how the breach was successful initially despite having detection software.

* Option C: This option shifts the blame to third-party vendors, which may not directly explain the effectiveness of the malware detection.

* Option D: This points to the malware disguising itself, which could bypass some detection, but the

* crucial factor was the human oversight in not responding to alerts.
