Microsoft AZ-900 Questions To Gain Brilliant Result [2023]

If you're an IT professional want to achieve your dream career in Microsoft Azure, passing the Microsoft Azure Fundamentals exam is not an easy task. However, with a demanding approach, finding the time to prepare effectively for the AZ-900 exam can be challenging. That's why you need reliable and actual Microsoft [AZ-900 Exam Questions](#) that provide all the necessary information to help you succeed. Look no further than Pass4success Microsoft AZ-900 test questions for the best preparation experience.

Pass4success Microsoft AZ-900 Exam Questions in PDF Format

Pass4success offers Microsoft AZ-900 exam questions in a convenient PDF format for AZ-900 Microsoft Azure Fundamentals exam preparation. The AZ-900 exam questions PDF file is easily understanding, and you can download it on various smart devices. Whether you have a PC, laptop, Mac, tablet, or smartphone, you can access your Microsoft AZ-900 practice exam questions PDF anytime and anywhere. Pass4success has simplified your preparation process, allowing you to study comfortably from home without the need for fixed class schedules.

Microsoft AZ-900 Online Practice Test Engine

With the assistance of Pass4Success [Microsoft Practice Test](#) engine, candidates can build confidence in their abilities and boost their performance in the actual AZ-900 Microsoft Azure Fundamentals exam. By regularly practicing within the simulated environment, candidates become familiar with the exam's challenges and intricacies. This familiarity instills a sense of confidence, enabling them to approach the AZ-900 exam with a positive mindset and perform at their best.

Keeping the dynamic Designing Cisco Security Infrastructure (300-745) exam content in mind, we provide updated and reliable 300-745 test material. We also offer free Cisco Dumps updates for up to 1 year after your purchase. We only provide cost-effective Designing Cisco Security Infrastructure (300-745) exam practice material. A 24/7 customer service can also help you in case of any problem. Don't wait for your success if the best Designing Cisco Security Infrastructure (300-745) exam preparation material is available on our platform. You can get actual Designing Cisco Security Infrastructure (300-745) exam questions and prepare for your test in a short time. If you have any issue, please contact our customer support.

Cisco 300-745 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Applications: Focuses on selecting security solutions to protect applications and designing secure architectures for cloud-native, containerized, and serverless environments using segmentation. Also addresses security design impacts of emerging technologies like AI, ML, and quantum computing.
Topic 2	<ul style="list-style-type: none">• Secure Infrastructure: Covers selecting security approaches for endpoints, identities, email, and modern environments like hybrid work, IoT, SaaS, and multi-cloud. Includes choosing VPN tunneling solutions, securing management planes, and selecting the appropriate firewall architecture based on business needs.
Topic 3	<ul style="list-style-type: none">• Artificial Intelligence, Automation, and DevSecOps: Explores AI's role in securing network infrastructure, selecting tools for automated security architectures such as SOAR, IaC, and API tooling, and integrating security into DevSecOps workflows and pipelines to minimize deployment risk.

Topic 4	<ul style="list-style-type: none">• Risk, Events, and Requirements: Covers SOC incident handling and response tools, modifying security designs to mitigate or respond to incidents, and applying frameworks like MITRE CAPEC, NIST SP 800-37, and SAFE. Includes matching regulatory and compliance requirements to business scenarios.

Cisco 300-745 Boot Camp: Designing Cisco Security Infrastructure - Prep4away Latest updated

Our study material is not same as other dumps or study tools, it not only has good quality but also has cheap price. We have most professional team to compiled and revise 300-745 exam question, in order to try our best to help you pass the exam and get a better condition of your life and your work. Moreover, only need to spend 20-30 is it enough for you to grasp whole content of 300-745 practice materials that you can pass the exam easily, this is simply unimaginable.

Cisco Designing Cisco Security Infrastructure Sample Questions (Q14-Q19):

NEW QUESTION # 14

A legal services company wants to prevent remote employees from accessing personal email and social media accounts while using corporate laptops. Which security solution enforces the policy?

- A. Cisco Umbrella
- B. RADIUS server
- C. network monitoring tool
- D. Cisco TrustSec

Answer: A

Explanation:

Cisco Umbrella provides DNS-layer security and content filtering, allowing organizations to block categories such as personal email and social media. This enforces acceptable-use policies for remote employees regardless of where they connect, ensuring corporate devices comply with security requirements.

NEW QUESTION # 15

What is the primary benefit of conducting a root cause analysis after a security incident?

- A. Validate OSI model compliance
- B. Drive design improvements to prevent recurrence
- C. Enable compliance with NTP standards
- D. Improve FTP throughput

Answer: B

Explanation:

Root cause analysis focuses on identifying the underlying cause of a security incident. This enables organizations to improve system design, controls, or processes so that similar incidents do not happen again, rather than only fixing symptoms.

NEW QUESTION # 16

A security engineer on an application design team must choose a framework of attack patterns to evaluate during threat modeling. Which framework provides the common set of attacks?

- A. MITRE CAPEC
- B. Cisco SAFE
- C. SOC2
- D. GDPR

Answer: A

Explanation:

In the "Risk, Events, and Requirements" domain of the Cisco SDSI curriculum, understanding how to systematically identify and mitigate threats is essential. MITRE CAPEC (Common Attack Pattern Enumeration and Classification) is a comprehensive dictionary and classification scheme for known attack patterns used by adversaries. It is specifically designed to help security engineers, developers, and designers understand how an attacker might exploit a system. By using CAPEC during the threat modeling phase, an engineer can look at specific "attack patterns"-such as SQL injection, Cross-Site Scripting (XSS), or Man-in-the-Middle-to see if the application's architecture is resilient against them.

Unlike Cisco SAFE (Option A), which is an architectural guide providing best practices for designing secure networks, or GDPR (Option B) and SOC2 (Option D), which are regulatory and compliance frameworks focused on privacy and operational auditing, CAPEC is purely technical and focused on the "how" of an attack. It provides the granular data necessary to simulate attacks and build robust defenses into the application design. Integrating CAPEC into the development lifecycle allows teams to move beyond broad risks and address the specific methods attackers use to bypass security controls. This alignment with the MITRE knowledge base ensures that the security infrastructure is designed with a realistic understanding of modern adversarial tactics, which is a core objective for Cisco security professionals.

NEW QUESTION # 17

Employees in a healthcare organization could not access their devices when they returned to work after the weekend. The security team discovered that a threat actor had encrypted the devices. Which security solution would mitigate the risk in future?

- A. network configuration management
- **B. endpoint detection and response**
- C. data loss prevention
- D. password policy enforcement

Answer: B

Explanation:

Endpoint Detection and Response (EDR) provides continuous monitoring, detection, and automated response to suspicious activity on devices. It can identify and stop ransomware attacks before encryption occurs, mitigating the risk of device lockouts in the future.

NEW QUESTION # 18

An oil and gas company recently faced a security breach when an employee's notepad, which contained critical login credentials, was stolen. The incident led to unauthorized access to a user account, which posed a significant risk to sensitive company data and operations. The company wants to adopt a security measure that enhances user account protection. Which action must be taken to prevent breaches like this from happening in the future?

- A. Configure a password expiration policy.
- B. Update the RADIUS server.
- **C. Implement MFA**
- D. Implement single sign-on.

Answer: C

Explanation:

Multi-Factor Authentication (MFA) strengthens user account security by requiring additional verification factors beyond passwords, such as tokens or biometrics. Even if credentials are stolen, MFA prevents unauthorized access, directly addressing the breach scenario.
