Salesforce Certified Platform Developer Sample Questions (Q134-Q139):

NEW QUESTION # 134

A developer has a Apex controller for a Visualforce page that takes an ID as a URL parameter. How should the developer prevent a cross site scripting vulnerability?

- A. `ApexPages.currentPage().getParameters().get('url_param').escapeHtml4()`
- B. `ApexPages.currentPage().getParameters().get('url_param')`
- C. `String.escapeSingleQuotes(ApexPages.currentPage().getParameters().get('url_param'))`
- D. `String.valueOf(ApexPages.currentPage().getParameters().get('url_param'))`

Answer: A

NEW QUESTION # 135

A developer is asked to write helper methods that create test data for unit tests.

```
01: public TestUtils {
02:
03:     public static Account createAccount () {
04:         Account act = new Account ();
05:         // ...set some fields on acct...
06:         return act;
07:     }
08:     //...other methods...
09: }
```

What should be changed in the Testutils class so that its methods are only usable by unit test methods?

- A. Remove static from line 03.
- B. Add `@IsTest` above line 01.
- C. Add `@IsTest` above line 03,
- D. Change public to private on line 01.

Answer: C

NEW QUESTION # 136

A company wants to implement a new call center process for handling customer service calls. It requires service reps to ask for the caller's account number before proceeding with the rest of their call script.

Following best practices, what is the optimal approach to satisfy this requirement?

- A. Apex trigger
- B. Approvals
- C. Einstein Next Best Action
- D. Flow Builder

Answer: D

NEW QUESTION # 137

A developer is implementing an Apex class for a financial system. Within the class, the variables 'creditAmount' and 'debtAmount' should not be able to change once a value is assigned. In which two ways can the developer declare the variables to ensure their value can only be assigned one time? Choose 2 answers

- A. Use the static keyword and assign its value in the class constructor.
- B. Use the final keyword and assign its value when declaring the variable.
- C. Use the final keyword and assign its value in the class constructor.
