Windows laptops and PCs support the desktop-based software of the SAP C-TS414-2023 practice test. These SAP Certified Associate - SAP S/4HANA Cloud Private Edition, Quality Management (C-TS414-2023) practice exams create situations that replicate the actual C-TS414-2023 exam.

SAP Certified Associate - SAP S/4HANA Cloud Private Edition, Quality Management Sample Questions (Q21-Q26):

NEW QUESTION # 21

You want to create a quality notification for the Complaint Against Supplier notification origin. Which of the following documents are available as standard in SAP S/4HANA to use as reference documents? Note: There are 2 correct answers to this question.

- **A. Material document**
- B. WBS element
- C. QM order
- **D. Purchasing document**

Answer: A,D

Explanation:

For a "Complaint Against Supplier" notification (e.g., type Q2, transaction QM01):

* Material Document (B): Material documents (e.g., goods receipt via MIGO) are standard references, linking the complaint to a specific receipt event (SPRO > QM > Quality Notifications > Notification Creation).

* Purchasing Document (C): Purchase orders (e.g., from ME21N) are commonly referenced to tie the complaint to the supplier's delivery or order.

* WBS Element (A): Work Breakdown Structure elements are PS-related, not standard for supplier complaints.

* QM Order (D): QM orders track costs but aren't reference documents for notification creation.

Thus, "Material document" and "Purchasing document" are the correct answers. References: SAP Help Portal

- "Reference Documents for Supplier Complaints"; SAP S/4HANA QM User Guide - "Notification Creation".

NEW QUESTION # 22

Which partner function is mandatory when creating a quality notification for the Customer Complaint notification origin?

- **A. Sold-to party**
- B. Interested party
- C. Author
- D. Contact person

Answer: A

Explanation:

For a quality notification with origin "Customer Complaint" (e.g., type Q1, transaction QM01):

* Sold-to Party (B): The sold-to party (customer) is mandatory because it identifies who raised the complaint, a key field in the notification header linked to SD data (SPRO > QM > Quality Notifications

> Notification Creation > Define Notification Types). Without this, the notification cannot be saved.

* Interested Party (A): Optional, used for additional stakeholders.

* Contact Person (C): Optional, specifies a customer contact but isn't required.

* Author (D): The creator (system user) is auto-filled, not a mandatory partner function.

Thus, "Sold-to party" is the correct answer. References: SAP Help Portal - "Customer Complaint Notifications"; SAP S/4HANA QM User Guide - "Partner Functions".

NEW QUESTION # 23

Which QM basic data can be used in the material specification? Note: There are 3 correct answers to this question.

- A. Inspection methods
- B. Dynamic modification rule
- C. Sampling procedures
- D. Selected set
- E. Master inspection characteristics

Answer: A,C,E

Explanation:

Material specifications in SAP QM (transaction QS61) define inspection requirements directly in the material master, independent of task lists. They integrate specific QM basic data:

* Master Inspection Characteristics (A): MICs are the core of material specifications, defining what is inspected (e.g., length, pH). They are assigned to the material spec to set tolerances or qualitative codes.

* Sampling Procedures (C): These determine the sample size for the material spec's characteristics (e.g., fixed sample of 5). They are assigned to MICs within the material specification.

* Inspection Methods (E): Inspection methods (e.g., "Visual check") can be linked to MICs in the material spec to specify how the inspection is performed.

* Dynamic Modification Rule (B): This governs inspection scope changes (e.g., skip lots) and is assigned to inspection types or plans, not material specs directly.

* Selected Set (D): Selected sets are used for qualitative valuations (e.g., UD codes) but are not directly assigned to material specs; they link via MICs instead.

Thus, "Master inspection characteristics," "Sampling procedures," and "Inspection methods" are the correct answers. References:

SAP Help Portal - "Material Specifications in QM"; SAP S/4HANA QM User Guide -

"Basic Data".

NEW QUESTION # 24

In which business object do you configure whether material purchasing from a supplier must be released by the quality department?

- A. Inspection plan
- B. Material master
- C. Business partner
- D. Quality info record: Procurement

Answer: D

Explanation:

Configuring a quality department release for supplier-material purchasing is managed in:

* Quality Info Record: Procurement (D): The quality info record (transaction QI01) includes a

"Release Required" indicator and status profile settings, allowing the quality department to approve or block purchasing from a supplier for a material. This is the standard object for supplier-specific QM controls (SPRO > QM > Quality Inspection > Quality Info Record).

* Business Partner (A): Manages supplier data but not QM release requirements.

* Material Master (B): Defines inspection types but not supplier-specific release by the quality department.

* Inspection Plan (C): Specifies inspection details, not release processes.

Thus, "Quality info record: Procurement" is the correct answer. References: SAP Help Portal - "Quality Info Record in Procurement"; SAP S/4HANA QM User Guide - "Supplier Management".

NEW QUESTION # 25

You define a priority type in the implementation guide (img) and assign it to a notification type. When you enter a priority during creation of notification, what can the system do?

- A. Calculate the notification start and finish dates.
- B. Start workflow to inform the responsible person(s)
- C. Create one or more task automatically
- D. Send one or more e-mails to involved partners

Answer: A
