## Valid JS-Dev-101 Exam Guide | Reliable JS-Dev-101 Dumps Free

The clients at home and abroad strive to buy our JS-Dev-101 study materials because they think our products are the best study materials which are designed for preparing the test Salesforce certification. They trust our JS-Dev-101 study materials deeply not only because the high quality and passing rate of our JS-Dev-101 study materials but also because our considerate service system. They treat our JS-Dev-101 Study Materials as the magic weapon to get the Salesforce certificate and the meritorious statesman to increase their wages and be promoted. You may be not quite familiar with our JS-Dev-101 study materials and we provide the detailed explanation of our JS-Dev-101 study materials as follow for you have an understanding before you decide to buy.

## Salesforce Certified JavaScript Developer - Multiple Choice Sample Questions (Q20-Q25):

### NEW QUESTION # 20

There is a new requirement for a developer to implement a currPrice method that will return the current price of the item or sales..

```
01 let regItem = new Item('Scarf', 50); // Name, Price
02 let saleItem = new SaleItem('Shirt', 80, .1); // Name, Price, discount
03 regItem.prototype.currPrice = function() { return this.price; }
04 console.log(regItem.currPrice());
05 console.log(saleItem.currPrice());
06
07 SaleItem.prototype.currPrice = function() { return this.price - (this.price * this.discount); }
08 console.log(regItem.currPrice());
09 console.log(saleItem.currPrice());
```

What is the output when executing the code above

- A. 5080Uncaught ReferenceError:this,discount is undefined72
- B. 0
- C. 1
- D. 50Uncaught TypeError: saleItem,description is not a function5080

**Answer: C**

### NEW QUESTION # 21

A developer has an isDeg function that takes one argument, pts. They want to schedule the function to run every minute.

What is the correct syntax for scheduling this function?

- A. setTimeout(isDeg, 60000, 'cat');
- B. setInterval(isDeg('cat'), 60000);
- C. setTimeout(isDeg('cat'), 60000);
- D. setInterval(isDeg, 60000, 'cat');

**Answer: D**

Explanation:

setInterval(fn, delay, arg1, arg2, ...) calls fn every delay ms, passing extra arguments.

To call isDeg every 60 seconds with "cat":

```
setInterval(isDeg, 60000, 'cat');
```

Why others are wrong:

A/D: isDeg('cat') is called immediately, and its return value is scheduled, not the function.

C: setTimeout runs once after 60 seconds, not repeatedly.

### NEW QUESTION # 22

Considering type coercion, what does the following expression evaluate to?

```
true + '13' + NaN
```

- A. 'true13'
- B. 0
- C. 'true13NaN'
- D. '113NaN'

**Answer: C**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract JavaScript Knowledge:

Expression:

true + '13' + NaN

The + operator is left-associative, so evaluation order:

true + '13'

When one operand is a string, + performs string concatenation.

true is converted to string 'true'.

'true' + '13' → 'true13'.

Result from step 1 with NaN:

'true13' + NaN

Again, one operand is a string, so concatenation.

NaN is converted to string 'NaN'.

'true13' + 'NaN' → 'true13NaN'.

Final value: 'true13NaN'.

So A is correct.

Why others are wrong:

B: '113NaN' would require true to coerce to 1 first and no string to be present, which is not the case because '13' forces string concatenation.

C: 14 would require pure numeric addition, which is not the case once a string is involved.

D: 'true13' ignores the final + NaN part.

Concepts: type coercion with +, boolean to string, NaN to string, left-associative evaluation.

### NEW QUESTION # 23

refer to the exhibit.

```
01 <html lang="en">
02   <table onclick="console.log('Table log');">
03     <tr id="row1">
04       <td>Click me!</td>
05     </tr>
06   </table>
07   <script>
08     function printMessage(event)
09       console.log('Row log');
10     event.stopPropagation();
11   }
12
13   let elem = document.getElementById('row1');
14   elem.addEventListener('click', printMessage, false);
15 </script>
16 </html>
```

Which code change should be done for the console to log the following when 'Click me!' is clicked' > Row log > Table log

- A. Change line 10 to event.stopPropagation (false) ;
- B. Remove lines 13 and 14
- C. Change line 14 to elem.addEventListener ('click', printMessage, true);
- D. Remove line 10

**Answer: D**

### NEW QUESTION # 24

A developer creates an object where its properties should be immutable and prevent properties from being added or modified.

Which method should be used to execute this business requirement ?

- A. Object.freeze()
- B. Object.lock()
- C. Object.eval()
- D. Object.const()

**Answer: A**

## NEW QUESTION # 25

.....

The privacy protection of users is an eternal issue in the internet age. Many illegal websites will sell users' privacy to third parties, resulting in many buyers are reluctant to believe strange websites. But you don't need to worry about it at all when buying our JS-Dev-101 learning engine: JS-Dev-101. We assure you that we will never sell users' information because it is damaging our own reputation. In addition, when you buy our JS-Dev-101 simulating exam, our website will use professional technology to encrypt the privacy of every user to prevent hackers from stealing. We believe that business can last only if we fully consider it for our customers, so we will never do anything that will damage our reputation. Hope you can give our JS-Dev-101 exam questions full trust, we will not disappoint you.
