

Key Features of TestkingPass Splunk SPLK-4001 Practice Material for Exam Preparation

P.S. Free & New SPLK-4001 dumps are available on Google Drive shared by TestkingPass: <https://drive.google.com/open?id=1WyRnU9YYq0L-l0IqEXqy00qE0u-yzI29>

As the saying goes, to sensible men, every day is a day of reckoning. Time is very important to people. People often complain that they are wasting their time on study and work. They do not have time to look at the outside world. Now, SPLK-4001 exam guide gives you this opportunity. SPLK-4001 test prep helps you save time by improving your learning efficiency. With our study materials, you can efficiently use all your fragmented time to learn. You can use your mobile phone to practice whether on the bus or at the time you are queuing up for a meal or waiting for someone. SPLK-4001 learning question helps you to enjoy the joy of life while climbing the top of your career. What are you hesitating? Come and buy it.

Our SPLK-4001 study quiz are your optimum choices which contain essential know-hows for your information. If you really want to get the certificate successfully, only SPLK-4001 guide materials with intrinsic contents can offer help they are preeminent materials can satisfy your both needs of studying or passing with efficiency. For our SPLK-4001 Exam Brindumps contain the most useful information on the subject and are always the latest according to the efforts of our professionals.

High-efficiency SPLK-4001 Exam Practice Bootcamp Materials are wise for you - TestkingPass

One of the top features of Splunk SPLK-4001 exam dumps is the SPLK-4001 exam passing a money-back guarantee. In other words, your investments with TestkingPass Links to an external site. Splunk Splunk O11y Cloud Certified Metrics User exam questions are secured with the 100 Splunk O11y Cloud Certified Metrics User SPLK-4001 Exam passing a money-back guarantee. Due to any reason, if you did not succeed in the final SPLK-4001 exam despite using TestkingPass SPLK-4001 pdf questions and practice tests, we will return your whole payment without any deduction.

Splunk SPLK-4001 (Splunk O11y Cloud Certified Metrics User) Exam is an industry-recognized certification program that helps to validate an individual's knowledge and expertise in the area of cloud monitoring and analytics. Splunk O11y Cloud Certified Metrics User certification exam is specifically designed for Splunk Cloud administrators who are responsible for monitoring cloud-based infrastructure and applications. Through this certification program, candidates will gain technical expertise and knowledge required to implement and manage cloud monitoring strategies using Splunk Metrics.

Splunk O11y Cloud Certified Metrics User Sample Questions (Q57-Q62):

NEW QUESTION # 57

An SRE creates a new detector to receive an alert when server latency is higher than 260 milliseconds. Latency below 260 milliseconds is healthy for their service. The SRE creates a New Detector with a Custom Metrics Alert Rule for latency and sets a Static Threshold alert condition at 260ms. How can the number of alerts be reduced?

- A. Choose another signal.
- B. Adjust the notification sensitivity. Duration set to 1 minute.
- C. Adjust the threshold.
- **D. Adjust the Trigger sensitivity. Duration set to 1 minute.**

Answer: D

Explanation:

Explanation

According to the Splunk O11y Cloud Certified Metrics User Track document¹, trigger sensitivity is a setting that determines how long a signal must remain above or below a threshold before an alert is triggered. By default, trigger sensitivity is set to Immediate, which means that an alert is triggered as soon as the signal crosses the threshold. This can result in a lot of alerts, especially if the signal fluctuates frequently around the threshold value. To reduce the number of alerts, you can adjust the trigger sensitivity to a longer duration, such as 1 minute, 5 minutes, or 15 minutes. This means that an alert is only triggered if the signal stays above or below the threshold for the specified duration. This can help filter out noise and focus on more persistent issues.

NEW QUESTION # 58

A customer has a very dynamic infrastructure. During every deployment, all existing instances are destroyed, and new ones are created. Given this deployment model, how should a detector be created that will not send false notifications of instances being down?

- A. Check the Ephemeral checkbox when creating the detector.
- B. Check the Dynamic checkbox when creating the detector.
- **C. Create the detector. Select Alert settings, then select Ephemeral Infrastructure and enter the expected lifetime of an instance.**
- D. Create the detector. Select Alert settings, then select Auto-Clear Alerts and enter an appropriate time period.

Answer: C

Explanation:

According to the web search results, ephemeral infrastructure is a term that describes instances that are auto-scaled up or down, or are brought up with new code versions and discarded or recycled when the next code version is deployed¹. Splunk Observability Cloud has a feature that allows you to create detectors for ephemeral infrastructure without sending false notifications of instances being down². To use this feature, you need to do the following steps:

Create the detector as usual, by selecting the metric or dimension that you want to monitor and alert on, and choosing the alert condition and severity level.

Select Alert settings, then select Ephemeral Infrastructure. This will enable a special mode for the detector that will automatically clear alerts for instances that are expected to be terminated.

Enter the expected lifetime of an instance in minutes. This is the maximum amount of time that an instance is expected to live before being replaced by a new one. For example, if your instances are replaced every hour, you can enter 60 minutes as the expected lifetime.

Save the detector and activate it.

With this feature, the detector will only trigger alerts when an instance stops reporting a metric unexpectedly, based on its expected lifetime. If an instance stops reporting a metric within its expected lifetime, the detector will assume that it was terminated on purpose and will not trigger an alert. Therefore, option B is correct.

NEW QUESTION # 59

What happens when the limit of allowed dimensions is exceeded for an MTS?

- A. The datapoint is averaged.
- B. The datapoint is updated.
- C. The datapoint is dropped.
- **D. The additional dimensions are dropped.**

Answer: D

Explanation:

According to the web search results, dimensions are metadata in the form of key-value pairs that monitoring software sends in along with the metrics. The set of metric time series (MTS) dimensions sent during ingest is used, along with the metric name, to uniquely identify an MTS¹. Splunk Observability Cloud has a limit of 36 unique dimensions per MTS². If the limit of allowed dimensions is exceeded for an MTS, the additional dimensions are dropped and not stored or indexed by Observability Cloud². This means that the data point is still ingested, but without the extra dimensions. Therefore, option A is correct.

NEW QUESTION # 60

Which analytic function can be used to discover peak page visits for a site over the last day?

- A. Maximum: Aggregation (Id)
- B. Count: (Id)
- C. Maximum: Transformation (24h)
- D. Lag: (24h)

Answer: C

Explanation:

Explanation

According to the Splunk Observability Cloud documentation¹, the maximum function is an analytic function that returns the highest value of a metric or a dimension over a specified time interval. The maximum function can be used as a transformation or an aggregation. A transformation applies the function to each metric time series (MTS) individually, while an aggregation applies the function to all MTS and returns a single value. For example, to discover the peak page visits for a site over the last day, you can use the following SignalFlow code:

```
maximum(24h, counters("page.visits"))
```

This will return the highest value of the page.visits counter metric for each MTS over the last 24 hours. You can then use a chart to visualize the results and identify the peak page visits for each MTS.

NEW QUESTION # 61

Which of the following statements about adding properties to MTS are true? (select all that apply)

- A. Properties can be set in the UI under Metric Metadata.
- B. Properties can be set via the API.
- C. Properties are applied to dimension key:value pairs and propagated to all MTS with that dimension
- D. Properties are sent in with datapoints.

Answer: A,B

Explanation:

Explanation

According to the web search results, properties are key-value pairs that you can assign to dimensions of existing metric time series (MTS) in Splunk Observability Cloud¹. Properties provide additional context and information about the metrics, such as the environment, role, or owner of the dimension. For example, you can add the property use: QA to the host dimension of your metrics to indicate that the host that is sending the data is used for QA.

To add properties to MTS, you can use either the API or the UI. The API allows you to programmatically create, update, delete, and list properties for dimensions using HTTP requests². The UI allows you to interactively create, edit, and delete properties for dimensions using the Metric Metadata page under Settings³.

Therefore, option A and D are correct.

NEW QUESTION # 62
